## We walk this road...

Fishing is not a simple hobby. No matter how good a gear one may have, without experience and knowledges he will not be able to deal with unexpected incidents. And even with the skill, knowledge and experience, anglers won't be able to catch the target without having this great nature on your side.

So why do so many people become absorbed in this high-risk hobby? It is simply because there is a clear goal and clear results. People hear of a target, get information, collect all the necessary gear and head out fishing. Once that fish is in your hands, there is a joy only those who have achieved their goals can understand.

Another reason why "fishing" fascinates so many can be attributed to the fact that "there is no ending".

Even when anglers achieve their goals, there is always "a bigger fish", "the fish that got away" and "different places to fish". One day, there will be a time when you realize that we are confronting only part of this profound nature.

At Ripple Fisher, we strive to create rods to help anglers keep achieving their goals. However, the rod is only part of the journey. The most important factor in fishing is the "angler", who has to confront the harsh nature. This harsh nature at times can come at the angler with full force and the greatest weapon an angler can possess at that moment is "experience".

However, if one possesses fishing tackle that can become part of their body, this will help become your next best weapon to "experience". We believe that strength and controllability in a rod are bare minimum requirements to face this harsh nature.

At Ripple Fisher, we hope to continue to produce rods that will be chosen as a "cane" to guide anglers towards their never ending journey.

2018 New Model

# RealCrescent

Light game series

The “new Real Crescent” series have been finely honed to further enjoy the deep and technical light game fishing. They are equipped with the controllability and sensitivity to appreciate the technical jig-head games and also possess the power for anglers to enjoy targeting rockfish and bream. With the easy and light usability, anglers will be able to appreciate the sharp and powerful blank it possesses. The high sensitivity, lightness, its beautiful bend curve and power will respond to each angler’s needs for the light game. The new Real Crescent series are the next generation of basic light game rods. We have carefully selected 4 models in the spinning and 3 models for the bait-casting tackle. All models are highly versatile with the potential to target various species in various fields for the light game. We hope you can experience our Real Crescent models to strive for the next stage in light game fishing. (All models equipped with Torzite K guides and NANOALLOY® Technology blank)

**New RealCrescent RC-55 / Spinnnig Model**  
This is an ideal model for use with a simple jig-head rig. Overall, it has a sharp feeling to it, but with the use of the NANOALLOY ® material, the highly repulsive nature of the blank will bend nicely during the cast. The highly sensitive characteristics of the blank will not only transmit the information on the bite but also the subtle water pressure differences through the blank. Anglers will be able to utilize PE, nylon, fluorocarbon and ester lines.

**New RealCrescent RC-65 / Spinning Model**  
This is the standard model that stands as the core for the spinning model. Anglers will be able to experience a seamless usage through the fast tapered rod with a flexible tip, resilient belly and strong butt section. It is a versatile rod for use in various fields with the use of simple jig-head rigs, plugs, Carolina rigs and even light wind techniques.

**New RealCrescent RC-75 / Spinning Model**  
It possesses the sharpest feel of the blank in the Real Crescent series for use in not only Aji and Mebaru (Rock fish) targets, but also for various species of rockfish, bream and for the light seabass game. The sharp tip section will transmit the vital information on the current while enabling anglers to use Carolina rigs, Texas rigs, plugs and metal jigs with a high response. The strong butt section of the rod can deal with the unexpectedly large rockfish and bream measuring over 50cm.

**New RealCrescent RC-81 / Spinning Model**  
This is a long length model designed mainly for use with Calorina rigs and floating rigs, but is also great with 3~5g jig-heads. Compared to the RC-75, the stiffness of the tip section has been reduced for a lighter feel when in use. With its highly sensitive nature, it is an ideal rod for anglers to search the deeper area at great distances.

**New RealCrescent RC-57 / Bait Casting Model**  
Despite the stiff characteristics of the blank to exhibit the nature of a bait-casting model, it is a finesse model with an outstanding cast-feel. We have designed the rod so anglers can easily load the rod to cast with jig-head rigs weighing less than 1g. It is also ideal for fishing styles that require sensitivity during the retrieval, such as dead slow retrieval of super light lures.

**New RealCrescent RC-67 / Bait Casting Model**  
This is the most basic model for the light game bait-casting tackle fishing. With the fast tapered flexible tip section and stiff belly to butt section, anglers will not only be able to cast and control light jig-head rigs but also utilize various rigs, plugs, and metal jigs stress-free. This next generation light game rod will enable anglers to capitalize on the biggest asset of the bait-casting reel by releasing the clutch while using the lift and fall techniques and drifting techniques.

**New RealCrescent RC-77 / Bait Casting Model**  
This is the middle class bait-casting model to target various species of rockfish, bream and seabass. It is an ideal light game rod to cover various species and fishing styles using “bottom-dragging”, “lift and fall” techniques with plugs to induce those reaction bites. The whole rod has been designed to be stiff to the tip, enabling anglers to cast lures up to 15g and rip those monstrous fish off the bottom with its outstanding butt power.

# SilverStream

Seabass game series

The Silver stream lineup is a middle game series with seabass being the core target, yet possessing the qualities to deal with situations targeting flounders and Akame (Japanese red-eye barramundi). All models exhibit the power to target the lunker seabass and have been arranged depending on blank characteristics. 3 highly sensitive models in the “Flows” series that are designed to decipher the intricate currents, 1 model in the “Tradition” series that is equipped with the tenacity and torque, and 2 models in the “Red-Eye” series for those anglers targeting monstrous seabass and Akame. These seabass rods are not specialized for situations or concepts but will exhibit its true potential dependent on the anglers’ skill.

## SilverStream 96 Tradition

Tradition 96 is a model with flexibility, high elasticity and lightness blended into this single blank with added controllability to go head to head with monstrous seabass. Unlike those heavy models which simply tend to be way too stiff, this rod will create a parabolic bend curve even when smaller fish are on, yet having extreme torque once more load is on the blank. Although it has a parabolic bending ability, we have managed to maintain the Ripple Fisher spirit in the blank with sharpness when casting. This bend enables anglers to parry the sudden torquful dash from the fish, while efficiently and easily surfacing the lunker size seabass. This Tradition 96 is a rod for anglers who definitely wants to land the monstrous fish. (The blank has not been renewed from the old naming “Monster Impact Tradition 96”)

## SilverStream 810 Flows Nano

The Flows 810 is the core model of the series with its ideal length for seabass fishing equipped with a strong butt power. It is especially outstanding with its casting swing through and high sensitivity. Anglers will be able to decipher the subtle difference in current movements while maintaining the high response required for an efficient and effective hookup. It may seem a little too stiff when anglers initially take a hold, but once you are out in the field casting, retrieving and fighting the fish, it will bend nicely. With its high tolerance, the butt will still hold extra power even when fighting a monstrous seabass. It is an ideal rod for use in various locations from estuaries, straits, rocks and even surf casting with the use of minnows, vibrations, sinking pencils and top water lures.

## SilverStream 96 Flows Nano

The Flows 96 is designed for use in large river systems, estuaries, surf casting and wading in the flats which require long distance casting of large lures. The balance of the rod is outstanding and anglers will not notices its 96 length. It also possesses a highly sensitive blank to feel for the slight change in currents. The 810 is a type of rod to conquer the current, where as the 96 is designed more to feel for the changes in current far away. The lightish tip section will allow anglers to not only utilize large lures but also various smaller minnows and vibration type lures. The concept for the Flows 96 is “distance” and “sensitivity”.

## SilverStream 103 Flows Nano

The Flows 103 is a model designed for use off the rocks and surf casting which require the power and sharpness to cut through the strong head winds. It allows anglers to easily cast and trace smaller lures which weren’t possible with the stronger black-fin models, while also having the power required to swing through with heavier lures. Even with its long length, the blank made up with the new NANOALLOY® technology has enabled the rod to maintain its sharpness. The unique characteristic of the Nano blank also exerts the underlying power once the rod is loaded with a lunker size fish off rough rocks and heavy seas.

## SilverStream 87 RED EYE Nano

The 87 Red-Eye is a power rod we present to anglers targeting the monstrous seabass and the infamous Akame (Japanese red-eye barramundi) inhabiting the Shimanto River. It is not simply an over powered rod, but possesses a flexible tip enabling anglers to cast and control small to large minnows. The blank is tolerant and will lift the fish with its repulsive force while having great casting capabilities of large lures with the least amount of effort. Furthermore, the 87 is designed with a short length grip for easier usage in the wading game. It is a user-friendly rod with the combined features of sensitivity and power, dedicated for those lunker hunters out there.

## SilverStream 97 RED EYE Nano

In contrast to the 87 Red Eye, we have increased its power, ability to load the rod and castability. Although its concepts are the same as the 87, with the combined attributes of sensitivity and power, this model is most suited for a more extensive field. It's ideal to rip out massive Red-eyes, but also seabass off the rocks, black-fin seabass nearing the estuaries, and lunker size seabass lurking around the tetrapod’s. The response and high sensitivity required to instantaneously pull away the monstrous fish off the structures have been finely honed through the use of Nano material in the blank. This was our answer to stand at the pinnacle of rod making. We are proud to produce the next generation of power rods, the “Red-eye” series.

# Avarice

Black fin seabass game series

The Black-fin seabass game is conducted under harsh environmental conditions with strong head winds, heavy swells, complicated currents and uneven footing. The anglers have little advantage in these unforgiving conditions and the only way to overcome these factors are experience and the ability to analyze and make an efficient/good judgment in a given situation.

We have added the sharpness by employing the new Nano blank while fine tuning the standard capabilities as a black-fin seabass rod.

Anglers will cut through the strong head winds and sew through the complicated currents. The highly sensitive blank will allow anglers to notice the subtle changes in current and flow to inform you of bite spots.

## Avarice 103M Nano

The long awaited short length M class model is ready! This 103 length is light, easy to handle and is efficient when fishing from low rock formations or bolder rocks for the black-fin seabass or the normal seabass off the rocks and fishing from the surf for flounders. Although it is short in length, the blank will bend nicely to withhold the fish. This is a new generation of Black-fin seabass rod with the combined properties of long casting, butt power and the newly added element of light/easy handling.

## Avarice 106MH Nano

It possesses a stronger butt section compared to the 103M and with its refined taper design, it maintains the easy handling of the rod while improving its castability. The bigger the fish on the other end of the line, the more power it will exert, constantly applying pressure on the fish to efficiently surface it. You will be able to first handely experience how the carbon material has evolved from this 10ft 6inch blank packed with castability, loading power and controllability of the fish.

## Avarice 110H Nano

This is an almighty rod with its ideal length and power settings for use anywhere, anytime. It is capable of cutting through strong head winds, while having the ability to cast small lures to pinpoint accuracy and not to mention its overwhelming butt power. The Nano blank characteristics can be noticed in the contradicting nature of its sharpness when casting and its ability to bend nicely once it is loaded.

# MonsterImpact

Black fin seabass & Blue runner game series

The Monster Impact series are the most powerful of our lineup for seabass to go head to head with those monstrous black-fin seabass. These are not rods for everyone. They have been designed and made with the premise that the angler is not in a favorable position on the rocks. In other words, unfavorable conditions are the norm and the blanks have been designed to overcome the monstrous fish under these conditions.

It isn't rear for Blue runners to also come about when targeting these super size Black-fin. It is reassuring when using the Monster Impact for areas with both the blue runners and Black-fins swimming about. Although anglers will be able to cast out your usual Black-fin minnows, they also possesses an overwhelming power compared to your ordinary Black-fin rods, so we only recommend these rods for those anglers who are well experience and know what they want.

For those lunger anglers who know where the Black-fin bite and where the monstrous ones are hiding, these rods will surely become you next best friend.

## MonsterImpact 101HH Nano / Spinnnig Model

Like the 110HH, this rod is also designed to target both the black-fin and blue runners but this 101HH is set more towards the blue-runners. In other words, it is for anglers who are targeting blue-runners and might want to also cast out a few small lures for the black-fin. The short length 10ft 1inch and its short grip has been set for use around flat rock formations, to increase the casting accuracy and balance. Although it is a rod for the black-fin, it can also be used for situations where the bait-fish are extremely small when targeting the blue-runners with smaller lures.

## MonsterImpact 110HH / Spinnnig Model

This model has been designed with the power to overcome both the blue-runners and the black-fin seabass. It is not simply a harder and stiffer rod, but will bend tenaciously with the sudden run of the Kingfish. It is also ideal for fishing in heavy seas and strong head winds to target the monster class black-fin. Although it is a powerful rod, the tip section has been build with some flexibility for anglers to punch out those smaller lures. The belly to butt section of the rod is a HH class and has the strongest power of the lineup.

## MonsterImpact 110HH HIRA / Bait Casting Model

This is the highly responsive bait-casting Hirasuzuki (Black-fin seabass) model with great casting capabilities. This HIRA bait-casting model is composed with lightweight grip and guides to improve its balance, casting accuracy, lure and fish controllability, while being delicate and powerful at the same time. We present the holy grail of fishing rods to the hard-core anglers who strive to pursue the bait-casting style for their Hirasuzuki game.

## MonsterImpact 110HH BLUE / Bait Casting Model

The 110HH BLUE bait-casting model has been developed with a blank focused on targeting the blue-runners (Kingfish, Yellow-tails and Amberjacks, etc.). It is stronger and stiffer compared to the HIRA bait-casting model, able to load the rod and cast out middle to large size lures. For targets are around 5kg, anglers will be able to lure-out the fish by analyzing the landscape and currents or efficiently cast out to feeding frenzies out in the open. Once the fish is on, the stiff characteristics of the rod will soon transform into a tenacious rod, absorbing the violent power of the blue-runners thrashing along the rocks.

## Rod Detail

Avarice • Reel seat (Fuji)  
/ 103M • DPS18 Down lock / 106MH&110H • DPS20 Down lock  
Technology of TORAY is loaded to blank of rod  
that "NANO" is on following the model name.
