

Boat Casting / GT

OceanRidge

This unified OceanRidge series comprise of GT rods packed with Ripple Fisher's pride and joy. The lineup which have been designed with the ultimate manual settings are dedicated for the experienced anglers around the world. Although these rods are not for the fainthearted, we are positive that the rods will become a part of you for those skilled enough to recognize their strengths and style of fishing. All six models in the OceanRidge series are especially designed to target large GTs which inhabit the waters in various parts of the world. We have not classified the rods depending on power, but have carefully selected and developed the lineup depending on the unique characteristics of the rods. All blanks in the series have been built with the use of the NANOALLOY® technology™ developed by Toray industries, Inc. and have gone through countless hours of testing in the field. We are proud to present the series for those anglers who seek to master the GT game further and for those who are willing to challenge the limits.

OceanRidge Reversal GT 80 Nano

This is a model where anglers will be able to experience and feel for the distinct difference in the Nano blank. It is lighter, stronger and more sensitive while having an astounding ability to cast long distances. Anglers will be able to utilize pencil type lures and small/medium mouthed poppers to land those massive GTs. The blank has a smooth bend curve with increasing torque as more load is applied on the rod. It is an ideal rod for those who have never experienced our OceanRidge series or those lighter weighing anglers (approx. 60kg) who have the skill to smoothly transfer their body weight on the rod during the fight. Anglers Weight : 65kg~(Recommendation)

OceanRidge LC GT 82 Nano

For those who want to cast farther than any other angler on the boat. This is an ideal rod for use when long casting is required or casting against head winds. It is suited for use with poppers and diving pencil type lures. The Nano material has not only increased its controllability but anglers will also be able to sense the slightest changes in current movement through the blank, line and lure while efficiently and effectively surface the GT. Although it is a long casting model, you will be pleasantly surprised with its lightness and controllability. Anglers Weight : 70kg~(Recommendation)

OceanRidge Flex GT 77 Nano

This model was developed with the countless requests from international anglers who fish from smaller charter boats. With its short length and hard tip section, anglers will be able to enjoy maneuvering the large mouthed poppers to induce that bite. It goes without saying that the short length rod is also useful when fishing from the central section or stern of the small to medium size boats with the use of various types of lures including poppers/diving poppers, medium to large size pencil poppers and other diving pencils which require a more manual reeling type action. This short length also helps to cast out large lures with the repulsive force of the blank while holding up to massive loads during the fight. To give you an idea of the rod power, it is classed between the Reversal 80 and the Powerfight 711. Anglers Weight : 65kg~(Recommendation)

OceanRidge PF GT 711 Nano

Although this stiff and super sensitive rod may be limited for use by experts, its true potential will be exhibited once anglers with vast knowledge and skills take hold of it. The NANOALLOY® technology™ developed by Toray has sharpened the blanks capabilities allowing anglers to decipher the subtle changes in current and control the lure at the anglers will. The PowerFight 711 has remarkable lifting power and will surface GTs exceeding 50kg simply by loading up the rod and using its repulsive force. Anglers Weight : 70kg~(Recommendation)

OceanRidge FINAL SPIRIT GT 79 Nano

As you can imagine from the naming of the FINAL SPIRIT series, the two models stand out from the rest of the GT lineup as it possesses outstanding power. While it maintains the controllability of the lures, lightness for handling and sensitivity, the lifting power is vicious. The FINAL SPIRIT GT79 has the stiffest tip section of all our GT rods allowing for easy use and control of large mouthed poppers and more manual maneuvering of diving pencil/popper type lures. With skill and knowledge of various lure maneuvering techniques, anglers will be able to utilize various types of lures depending on the field conditions. The bend curve is smooth with an extremely efficient lifting power. Anglers Weight : 70kg~(Recommendation)

OceanRidge FINAL SPIRIT GT 80 Nano

This is the most powerful model in Ripple Fisher's lineup. The somewhat lightish tip section will allow anglers to utilize pencil type lures to various shapes of poppers with a more manual feeling. The Nano blank characteristics will be exhibited to the fullest with more body weight of the angler applied to the rod, creating a violently strong lifting capacity. For average size and strength anglers to be able to maximize the rods potential strength, we recommend you practice lifting with the rod on a daily basis to get an in-depth understanding of the rods bend and "sweet spot" with a still weight of 10kg (at a 45 degree angle). Anglers Weight : 75kg~(Recommendation)

Light-Jigging / Bream Snapper

OceanArrow Snapper

The OceanArrow Snapper series for light jigging, TaiRubber and the Inchiku game. Although the rods themselves are flexible, they possess a core strength for anglers to overcome their targets while having the sensitivity to sense the slightest changes in current or bites. Our goal was to improve the response of the blanks true potential. These rods are packed with the elements for anglers to enjoy the sensitive and subtle currents when fishing for snapper and rockfish.

OceanArrow 67UL Snapper

The concept of the 67UL is to possess absolute sensitivity capable of transmitting vital information through the blank despite depth nor current while being able to lift the sizable fish. The flexible tip section will easily bend in once there is a bite, yet having a distinct core in the blank to aggressively set the hook. Equipped with both delicate sensitivity and a powerful butt section capable of lifting and controlling the fish, this 67UL is true to Ripple Fisher's spirit of rod making. We would like for many anglers to take hold and experience this rod first handedly.

OceanArrow 65L Snapper

The 65L is a model which is able to conduct a smooth retrieval under heavy pressure against the TaiRubber in deep waters and strong currents. The highly sensitive blank will transmit the slightest changes in current pressure and chases from your target through the blank, giving anglers another element to consider when fishing. The blank itself possesses an ideal stiffness and flexibility to efficiently and effectively hookup the fish. To put it into perspective, if the 67UL is a rod with a sensitive tip with a powerful butt section, this 65L is a rod which exhibits its power and sensitivity through the smooth bend of the whole rod. Although the 65L is mainly developed for TaiRubber fishing, it is also equipped with the ideal settings for light jigging and the Inchiku game.

OceanArrow 66ML Snapper

The 66ML has a grip joint structure with an increased butt power compared to the previous two models. It is not only great for your TaiRubber game but an all-rounder rod for the Inchiku game, jigging and even soft plastics game to target the various species you may encounter when fishing from your boat. With its versatility, anglers can make good use of their light line to suit your own style of fishing to target any given species from your boat or even a kayak where you may be limited with the number of rods you can take. We are positive that this rod will be your next best friend for not only local waters but also fishing expeditions where you may have to deal with large snappers, groupers, hair-tail, blue-runners etc.

OceanVoyager GTXpedition

3pcs Pack Rod Series "GTXpedition" 2019 New Model Coming Soon

Ripple Fisher's 3-piece pack-rod "GTXpedition" has been reborn. In addition to the already available PE 6 class rod for traveling the world, we have added a PE8 class rod ideal not only for GTs but also monstrous Kingfish. With the new addition of the Aquila EX for the 2019 season, your options have been greatly widened. The new GTXpedition has been refined to bend appropriately with outstanding underlying power. Once you take hold of this rod, you will be surprised how light, well balanced and sharp it is while possessing the ability to bend in nicely and lift the fish once loaded. We hope you will be able to experience our ever evolving technology in rod building.

GTXpedition 813-6 (Tentative name • Release date to be determined)

GTXpedition 813-8 (Tentative name • Release date to be determined)

Jigging / BlueRunner

OceanArrow SELFISH

The blank on this rod is very strong but it doesn't feel stiff. At a certain bend, the flexing force of the rod will 'kick up' the jig. It is also a very sensitive rod transmitting the movement of the current, action from the jig and response from the fish throughout the blank. The rear grip has been extended to cater for various styles of jerking. Words alone cannot describe the all qualities of this rod. Right from the hookup to landing the fish, the rod bends nicely with lots of lifting power and feels at home in your hands. Ripple Fisher proudly present the "SELFISH" series. Most remarkable characteristics of SELFISH series is operability with sharpness and lifting power hidden in fine and light stick. We present you 3 type of standard model, 2 type of shallow model for horizontal jigging and 1 type of specialized model for large kingfish or great amberjack.

OceanArrow SELFISH 622S Nano

This is employed versatility to adjust variety of situation, way of jerk and type of jigs. It transmits many signals and vital information when you jerk on 40~50m vertically or on 30~40m horizontally. You do not have to worry if fish on such as around 7kg of yellowtail kind or around 3kg of amberjack and kingfish.

OceanArrow SELFISH 613S Nano

If you wish to jerk and manipulate heavier jigs with as comfortable feeling as when you use 622S, 613S is going to be the one. It transmits slightest changes of current and you will give the action to jig as soon as you want to. We believe that you will be able to find your own tactics and strategies with this SELFISH 613S.

OceanArrow SELFISH 614S Nano

This 614S Nano have been sharpened 622S and 613S to give more not only power and stiffness but also sensitivity and operability. Whole blank bend very well to absorb the impact of blue runner while applying enough pressure on fish. You will be able to keep big yellowtail over 10kg, amberjack or kingfish around 7~8kg under control with 614S Nano.

OceanArrow SELFISH 654S Nano

The two most important factors we sought after in this blank were the outstanding butt power and a sensitive while flexible tip section for that extended feeling of manual operation towards the lure. Through countless trial and error processes, we finally set the length as a 6ft 5inch one piece model. In contrast to the base models of the SELFISH 622 and 614s where anglers could enjoy the maneuvering of the jig, this rod is able to eliminate the unwanted movement of the jig, allowing for a more natural movement. With the use of the Nano material, it has improved the sensitivity and lift speed while maintaining a tenacious bend.

OceanArrow SELFISH 655S Nano

655S which got more power than 654S have been given faster lifting speed while maintaining a tenacious bend. If you are going to aim kingfish or great amberjack over 10kg, this 655S Nano is recommended. This have been designed for horizontal jerking so the action of the jig will be more toned down and is ideal for anglers to maintain the line tension while maneuvering the jig horizontally. Of course you can jerk jig vertically when you try not to move jig too much. The potential of 655S Nano will be derive depend how you fish with it.

OceanArrow SELFISH 597S Nano / Vertical Model

This 597S Nano designed for vertical jigging to aim large size kingfish and Amberjacks. You will be able to jerk with high pitch in short stroke or jerk in long stroke with sharpness feeling. Yet you will feel kind of stiffness when you jerk, it will bend nicely and absorb the huge impact of great amberjack.

Under development model

SELFISH 634 Over head Model & 625 Over head Model (Tentative name)

The long awaited over head model in the Selfish series are here. We aimed to produce rods that are lethal in the toughest of times to allow the jig to naturally swim and able to limit unnecessary action. Anglers will be able to feel for the subtle changes in the current and efficiently alter the action to suit the situation. Furthermore, the bending point is set closer towards the butt section, relieving the stress on the angler once a big fish is loaded. This over head model is true to its name "Selfish", equipped with contradicting features of sensitivity and the tenacious lifting power. *Scheduled to be released in 2019

OceanArrow 5

The "5" series are the long sellers of Ripple Fisher's jigging rods. They are models which aim to take advantage when fighting massive fish. The 5210 and 5015 are over head models to especially target supersize fish. The short length design helps anglers manually maneuver the jig in the deep waters while the torqueful blank will easily take the brunt from supersize Dogtooth Tuna in the deep.

OceanArrow 5210 / Over head Model

This is the over head model, designed for vertical jigging in the slow currents. While it is not the mainstream of jigging we designed this rod as a personal desire to fight the huge kingfish or massive Dogtooth Tuna. This rod is a little more flexible than the Ocean Arrow 5015 and good for areas where the current is slow with average depths.

OceanArrow 5015 / Over head Model

To go head to head with huge fishes in depths of 120m - 200m, we designed this bait casting jigging model for easy usage on the jigs as well as an easy fight once a hookup is achieved. We have successfully designed this specialized blank and currently testing out a 5ft 2in/PE6 model.

Aquila Static load comparison of Aquila (3kg load)

Here are the comparisons of the Aquila series with a static load of 3kg. Aquila series have been categorized ST, MLT, MST and EX. ST which have versatility and well balanced, MLT which is loaded flexibility on tip and strength on butt, MST which is employed massive power to keep huge kingfish under control and EX which is first mull piece rod for Aquila series. MLT have been built with specialized design to hunt big one with lighter line than notation on specification. Utilizing its flexible and sensitive tip section, you can cast wider range of weight of lure comfortably. Once fish is on, MLT series bend very well smoothly like seamless and parry an attack of monstrous blue runner and it can be held with higher angle than other models. It is designed to apply good amount of pressure on fish continuously. EX series have been achieved smoothness on bending curve like a seamless. Sharpness, lightness and well-balance that are hidden in blanks of EX series will make you forget that those are 3 pics casting rod.

※Characteristics of each models from Aquila series are very unique and specialized. So, you are required to adjust your style of fighting depend on models. MST have enough power and stiffness to stop fish that run aggressively. Although you may not hold with high angle like BIG TUNA series, you can keep yourself lower position to load your weight on rod. MLT can be held with higher angle and bend well to provide you fish-friendly fight while applying pressure continuously.

BIG TUNA Static load on rods set at different angles

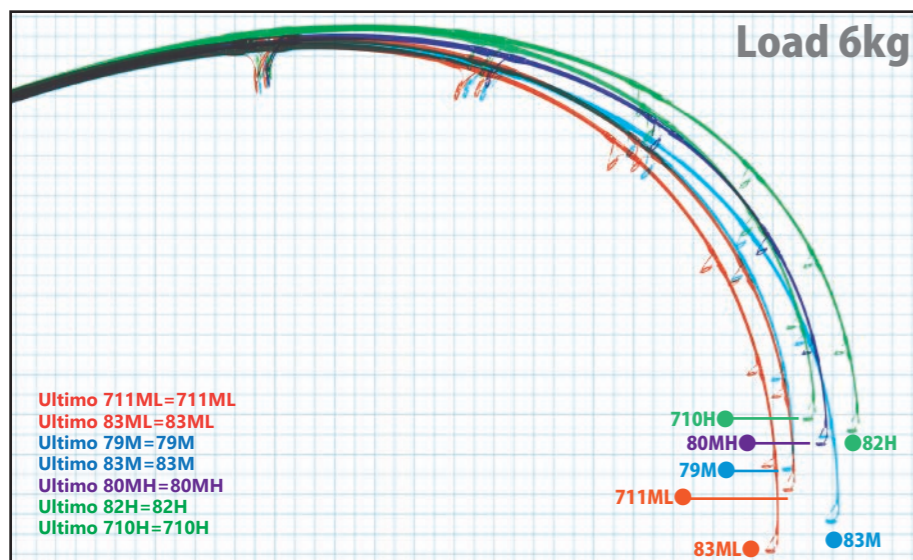

Static load comparison of BIG TUNA 85F & BIG TUNA 87 (6kg load)
These two models are ideal for situations where your targets are feeding on small Sardines and require you to cast small lures. A still weight of 6kg is loaded onto the rods designed for use with PE6. Although both models are suitable for PE6, the lifting power of the 87 is more superior to the 85F, capable of targeting larger fish.

Static load comparison of BIG TUNA 85 & BIG TUNA 710 (10kg load)
These two models are the core of the series capable of use with various size lures for different bait sizes. The 85 is an extended model of the 710 with a sharper tip section compared to the 87 when casting. Although the long length blank may feel stiffer, the butt section of the 710 is predominantly stronger.

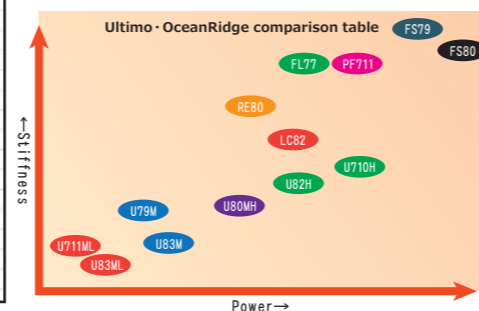

Static load comparison of BIG TUNA 76 and BIG TUNA 73 (10kg load)
These models will assist anglers for situations where large lures are required due to the targets feeding on large baits such as dolphin fish. At a 45° angle, both the 73 and 76 can be seen to have the same power. However, once the rod is lifted even higher, the 76 will start bending closer to the body, reducing the load on the angler. The 73 has a sharp casting feel while able to fight the fish speedily.

※The load on the body will feel different for each individual bending the rod. The Static load comparison is simply a reference.

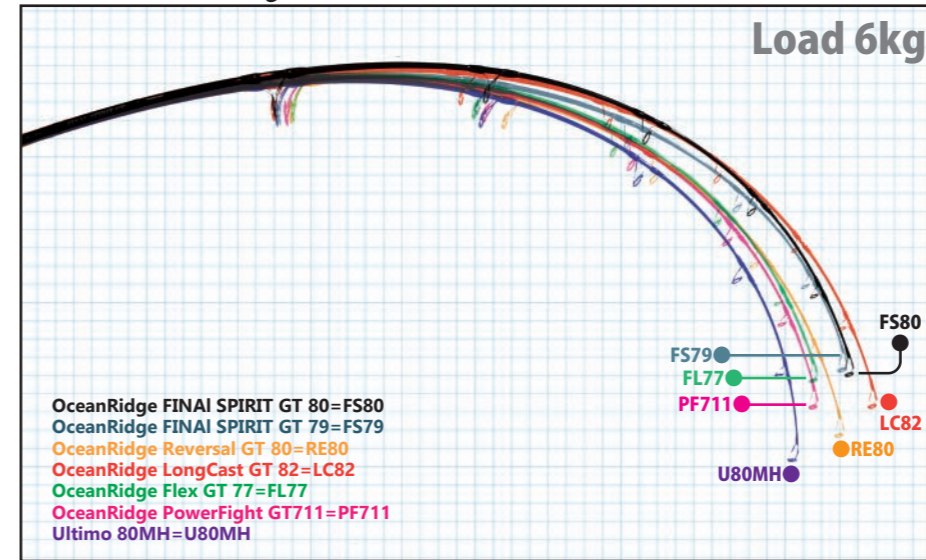

Ultimo Static load comparison of Ultimo (6kg load)

The Ultimo series are designed for use with diving pencil / diving popper type lures and some models are also great for use with Tuna and Kingfish. Although ML class have not employed NANOALLOY® technology, it is bent very smoothly to apply good enough pressure on fish continuously. Rest of models are employed NANOALLOY® technology to achieve strong repulsive force to keep applying good amount of pressure with even small amount of input. Differences of potential of each rod make ML is classified as characteristics while on fighting. Yet ML class have less power to pull fish up to surface than other models, it have enough potential for beginner or even for expert because of its lightness to reduce physical burden of anglers. Some models of Ultimo does not suit to popper with large cup face. So please refer to chart table of lures on page 23 for making sure.

OceanRidge Static load comparison of Ocean Ridge series (6kg load)

The Ocean Ridge series have been designed specifically to target GTs. The stiff tip section has enabled use with various lures depending on the skill of the angler. All models have the power to go head to head with monstrous GTs and are capable to cater for different fighting styles. The most powerful rod in the series are the GT80 and 79 which will require some strength and body weight in the angler to bring forth the rods true potential. Please refer to the recommended body weight* to give you an idea of which rod may suit you.

Type of popper for GT Rods					
Large Face Cup		Medium Face Cup		Small Face Cup	
OR FSGT79	Ultimo710H	OR FSGT79	Ultimo710H	OR FSGT79	Ultimo710H
OR FSGT80	Ultimo82H	OR FSGT80	Ultimo82H	OR FSGT80	Ultimo82H

OR LC GT82	Ultimo79M	OR LC GT82	Ultimo79M	OR LC GT82	Ultimo79M
OR Flex GT77	OR R GT80	OR Flex GT77	OR R GT80	OR Flex GT77	OR R GT80
				Ultimo83ML	OR R GT80

※These are poppers which has been used as reference
Large Face Cup -HAMMER HEAD / G-cup:I-cup
Medium Face Cup -HAMMER HEAD / D-cup:E-cup:SHAKURE
Small Face Cup -HAMMER HEAD / C-cup: DUEL / BIG BLUE BULL POPPER

※Although, all of these models can handle diving poppers or pencil type lures, please pay attention to the tipping strength of the rod when you pull lures as such as poppers with large face cup forcefully. Especially in the appeal which makes the large splash with it, we recommend you to follow the reference on chart above when you choose proper lure. Otherwise, it may result in damage or breakage of tip section of your rod.

OceanArrow Snapper Static load comparison of Ocean Arrow Snapper series (1kg load)

Here are the comparisons of the Ocean Arrow, Snapper series with a static load of 1kg. The power of the butt sections are basically the same for the 67UL and 65L designed for use with the Tai-rubber. However, you will notice the difference when you start retrieving and once the rod is loaded with a fish. The 67UL is flexible at the tip section with a contrastingly strong butt while the 65L will absorb the impact with the whole rod. The 66ML is a totally different rod compared to the 67UL and the 65L designed for use with Inchiku and light jigging with a unique grip joint section. The following comparative diagram will give you an idea of the difference in power, however it is not indicating that the 67UL and 65L are weak. The designs of the blanks themselves differ between those rods that are designed to fight with a thin line than to rods to aggressively stop the fish.

OceanArrow Series for Jigging Characteristic Table		
Light Model Snapper	Tairubber	Inchiku - Light Jigging
	67UL	65L 66ML
Standard Model Higher Versatility	622S	613S 614S
Specialized Model For Limited Situations		597S For Vertical Jigging
Shallow Model for the horizontal jigging	654S	655S
5 Series (Overhead Model) Monster Hunter(around 200m depth)		5210 5015

SELFISH OceanArrow 5 Static load comparison of Selfish, Ocean Arrow series (3kg load)

You can see the comparison between the 5 models in the Ocean Arrow, Selfish series with a static load of 3kg. The 622S, 613S and 614S are the most standard models in the series with 613S being the most versatile rod, able to jerk jigs around 120g in water less than 100m deep while naturally drifting the boat. The 614S is designed much stiffer and is more suited for vertical jigging with the boat positioned above the point. The belly section of the 654S and 655S are more flexible most suited for jigging on a diagonal angle in shallow areas. More specifically, the 654S is user-friendlier while the 655S being more suited for areas with extreme water movement and larger size fish. In addition, the Ocean Arrow 5 series are specialized short overhead reel rods designed with the tenacity to target the large species lurking in the deep zone.

Simple and Sturdy

Shore Casting / Seabass and more

SilverStream

We have added 2 models, the "Northern" to target the sea trout and sea salmon in the SilverStream series, which were middle class land-based rods to target seabass, flounders and barramundi's. 3 models in the Flows series to decipher the intricate current from its super sensitivity, 2 models in the Red-Eye series for the monstrous seabass and Akame (barramundi) and now the 2 new models in the Northern series for use with metal jigs or jig-minnows to target the sea trout or sea salmon consist of our SilverStream lineup. There is no power class in the series, and all have unique characteristics for the different species but there is one thing in common. That is the absolute butt power to deal with the lunker size targets. The SilverStream series are models which will perform to its limits depending on the anglers' needs and usage.

New SilverStream 106 Northern Nano

This model is ideal to cast metal jigs and jig minnows up to 50g in weight from rocky headlands and technical rock formations, which require a quick and tricky cast and retrieve. With its sharp characteristics, anglers will be able to cast accurately while controlling the jig at ease. Having said that, the rod will bend nicely once the rod is loaded and will prevent any loss of fish from the targets lip ripping. Furthermore, it possesses the butt power to aggressively stop the violent fish from diving into the rocks and structures. ※For anglers who prefer to use minnows when fishing in the surf, we recommend the SilverStream 103 Flows Nano or Avarice 103M Nano.

New SilverStream 112 Northern

The 112 Northern is a sharp rod designed for long distance casting and will enable anglers to cast out metal jigs and jig minnows up to 60g from the surf and other major points by utilizing the whole rods repulsive force in strong head and side winds. With its high sensitivity, this rod will become your ultimate weapon when the fish are far and you need to search a vast area. Furthermore, the long rod length will help you avoid any rocks or structures near by and it also possesses the butt power to rip off the monstrous flounders from the seabed. ※For anglers who prefer to use minnows when fishing in the surf, we recommend the SilverStream 103 Flows Nano or Avarice 103M Nano.

SilverStream 810 Flows Nano

The 810 Flows is the core model of the series with its ideal length for seabass fishing equipped with a strong butt power. It is especially outstanding with its casting swing through and high sensitivity. Anglers will be able to decipher the subtle difference in current movements while maintaining the high response required for an efficient and effective hookup. It may seem a little too stiff when anglers initially take a hold, but once you are out in the field casting, retrieving and fighting the fish, it will bend nicely. With its high tolerance, the butt will still hold extra power even when fighting a monstrous seabass.

SilverStream 96 Flows Nano

The 96 Flows is designed for use in large river systems, estuaries, surf casting and wading in the flats which require long distance casting of large lures. The balance of the rod is outstanding and anglers will not notice its 96 length. It also possesses a highly sensitive blank to feel for the slight change in currents. The 810 is a type of rod to conquer the current, where as the 96 is designed more to feel for the changes in current far away. The lightish tip section will allow anglers to not only utilize large lures but also various smaller minnows and vibration type lures. The concept for the Flows 96 is "distance" and "sensitivity".

SilverStream 103 Flows Nano

The Flows 103 is a model designed for use off the rocks and surf casting which require the power and sharpness to cut through the strong head winds. It allows anglers to easily cast and trace smaller lures which weren't possible with the stronger black-fin models, while also having the power required to swing through with heavier lures. Even with its long length, the blank made up with the new NANOALLOY® technology has enabled the rod to maintain its sharpness. The unique characteristic of the Nano blank also exerts the underlying power once the rod is loaded with a lunker size fish off rough rocks and heavy seas.

SilverStream 87 RED EYE Nano

The 87 Red-Eye is a power rod we present to anglers targeting the monstrous seabass and the infamous Akame (Japanese red-eye barramundi) inhabiting the Shimanto River. It is not simply an over powered rod, but possesses a flexible tip enabling anglers to cast and control small to large minnows. The blank is tolerant and will lift the fish with its repulsive force while having great casting capabilities of large lures with the least amount of effort. Furthermore, the 87 is designed with a short length grip for easier usage in the wading game.

SilverStream 97 RED EYE Nano

In contrast to the 87 Red-Eye, we have increased its power, ability to load the rod and castability. Although its concepts are the same as the 87, with the combined attributes of sensitivity and power, this model is most suited for a more extensive field. It's ideal to rip out massive Red-Eyes, but also seabass off the rocks, black-fin seabass nearing the estuaries, and lunker size seabass lurking around the tetrapod's. The response and high sensitivity required to instantaneously pull away the monstrous fish off the structures have been finely honed through the use of Nano material in the blank.

Under development model

SilverStream 81 (Tentative name)

This seabass rod is built up with only 40t highly resilient carbon fiber, creating a super sensitive and highly responsive blank. The controllability of the rod has been heightened to easily and technically maneuver the sinking pencils and top-water lures. Anglers will be able to detect the subtlest differences in water pressure for top-water to subsurface lures, while aggressively hooking up the weary fish. It is also a well-balanced rod for the wading game.
- Scheduled to be released in 2019

Shore Casting / Blackfin-Seabass

Avarice

The Black-fin seabass game is conducted under harsh environmental conditions with strong head winds, heavy swells, complicated currents and uneven footing. The anglers have little advantage in these unforgiving conditions and the only way to overcome these factors are experience and the ability to analyze and make an efficient/good judgment in a given situation.

We have added the sharpness by employing the Nano blank while fine tuning the standard capabilities as a black-fin seabass rod. Anglers will cut through the strong head winds and sew through the complicated currents. The highly sensitive blank will allow anglers to notice the subtle changes in current and flow to inform you of bite spots.

Avarice 103M Nano

This 103 length is light, easy to handle and is efficient when fishing from low rock formations or bolder rocks for the black-fin seabass or the normal seabass off the rocks and fishing from the surf for flounders. Although it is short in length, the blank will bend nicely to withhold the fish. This is a new generation of Black-fin seabass rod with the combined properties of long casting, butt power and the newly added element of light/easy handling.

Avarice 106MH Nano

It possesses a stronger butt section compared to the 103M and with its refined taper design, it maintains the easy handling of the rod while improving its castability. The bigger the fish on the other end of the line, the more power it will exert, constantly applying pressure on the fish to efficiently surface it. You will be able to first handly experience how the carbon material has evolved from this 10ft 6inch blank packed with castability, loading power and controllability of the fish.

Avarice 110H Nano

This is an almighty rod with its ideal length and power settings for use anywhere, anytime. It is capable of cutting through strong head winds, while having the ability to cast small lures to pinpoint accuracy and not to mention its overwhelming butt power. The Nano blank characteristics can be noticed in the contradicting nature of its sharpness when casting and its ability to bend nicely once it is loaded.

Under development model

Avarice 110M Nano (Tentative name)

It was our mission to create a flexible tip section for anglers to be able to capitalize on the short-bite from the blackfin seabass. Once the rod is loaded, the flexibility of the tip section will gradually transfer towards the belly to butt section to reduce the loss of fish through straightened hooks. Although flexible and pliant, the rod possesses a sharp feel, vital for targeting blackfin seabass. Anglers will be able to utilize lures ranging from the small 10cm minnows to the more sizable 40g class lures. The rod is not only sensitive and easily controllable, it also possesses great butt power to be able to deal with the unexpected guests of 5kg class blue-runners or even snappers.

• Scheduled to be released in 2019

Shore Casting / Blackfin-Seabass & BlueRunner & Other MonsterImpact

The Monster Impact are special class series developed to conquer specific situations where supersize fish are expected. We gave it unique power and characteristics to support anglers who are challenging their limits.

101HH & 110HH are the most powerful of our lineup for seabass to go head to head with those monstrous black-fin seabasses. These are not rods for everyone. They have been designed and made with the premise that the angler is not in a favorable position on the rocks. In other words, unfavorable conditions are the norm and the blanks have been designed to overcome the monstrous fish under these conditions. It isn't rear for Blue runners to also come about when targeting these super size Black-fin. It is reassuring when using the Monster Impact for areas with both the blue runners and Black-fins swimming about. Although anglers will be able to cast out your usual Black-fin minnows, they also possesses an overwhelming power compared to you experience and know what they want. For those lunger anglers who know where the Black-fin bite and where the monstrous ones are hiding, these rods will surely become you next best friend.

The 90H spinning model scheduled to be released in 2019 will be for anglers to target seabass and Red-Eye (Barramundis) with heavy and big-bait lures. By extending the boundaries of the series and pursuing pure power, the world for the Monster Impact series will be greatly widened.

MonsterImpact 101HH Nano / Spinning Model

Like the 110HH, this rod is also designed to target both the black-fin and blue runners but this 101HH is set more towards the blue-runners. In other words, it is for anglers who are targeting blue-runners and might want to also cast out a few small lures for the black-fin. The short length 10ft 6inch and its short grip has been set for use around flat rock formations, to increase the casting accuracy and balance. Although it is a rod for the black-fin, it can also be used for situations where the bait-fish are extremely small when targeting the blue-runners with smaller lures.

MonsterImpact 110HH / Spinning Model

This model has been designed with the power to overcome both the blue-runners and the black-fin seabass. It is not simply a harder and stiffer rod, but will bend tenaciously with the sudden run of the Kingfish. It is also ideal for fishing in heavy seas and strong head winds to target the monster class black-fin. Although it is a powerful rod, the tip section has been built with some flexibility for anglers to punch out those smaller lures. The belly to butt section of the rod is a HH class and has the strongest power of the lineup.

MonsterImpact 110HH HIRA / Bait casting Model

This is the highly responsive bait-casting Hirasuzuki (Black-fin seabass) model with great casting capabilities. This HIRA bait-casting model is composed with light weight grip and guides to improve its balance, casting accuracy, lure and fish controllability, while being delicate and powerful at the same time. We present the holy grail of fishing rods to the hard-core anglers who strive to pursue the bait-casting style for their Hirasuzuki game.

Under development model

MonsterImpact 90H / Spinning Model (Tentative name)

This is a specially tuned seabass model to easily cast through with big-baits (70g) and even small minnows from 20g. The butt section has been enhanced to easily stop lunger size seabass and Red-Eye (Japanese barramundi) that are feeding on large bait-fish (Sardines, gizzard shad, and mullets). We aimed to produce a rod where anglers will be able to enjoy casting large plugs a great distance. We present this ultimate spinning rod for the ultimate spinning anglers.
