## Exploring Uncharted Territory with Curiosity

How many rugged, unexplored areas remain on the Earth that are hostile to humans? There are parts of the sea with which we are familiar, but the depths of the oceans certainly remain hostile and unexplored. But with the rise of sea temperatures due to global warming, causing fish to migrate to deeper, colder waters, even the deep sea is slowly becoming more and more familiar to the angler. Advances in fishing equipment also contribute to this increasing familiarity. However, the depths of the sea are a hostile environment, with the pressure increasing by one unit of atmospheric pressure for every ten meters of depth, and as such they can be considered more challenging and difficult to reach than outer space. To explore such places through fishing is both exciting and stimulating.

Of course the recent pattern is not limited only to the ocean depths. Changes in the climate alter the surface ecosystems as well, resulting in gradual migrations of fish from the southern regions toward the north. In the midst of this, even familiar spots need to be re-explored. Driven by curiosity, anglers will probably visit such spots more often than they used to.

We have been able to work with such anglers who never give up on such challenges.

“I want you to make me a rod that can catch supersize amberjacks that kept breaking my rods.”

The beginning of Ripple Fisher was sparked by such passionate requests from an individual fishermen from southern Japan that ignited our inner fire 27 years ago.

For Ripple Fisher, the “simple and sturdy” philosophy was created by working with anglers to achieve their goals. It is the best chance for us to show off our skills as a rod manufacturer and it is also one of the most rewarding.

In search for the best rods every day, we have come to conclusion that it is not just a matter of having a powerful rod that is strong enough to catch monstrous fish, but for anglers to be able to continuously cast (or jig) all day long with this rod. If this cannot be achieved, then the goal to “catch” is a far-fetched journey. What we can do is to create rods with performances that will make you feel the “spirit of Ripple Fisher” once you take hold of our rods. Once the products reach the anglers and is taken to the field, it will finally perform to your needs and be reborn as a rod that can catch you fish.

All the products in our lineup are built up of dreams and curiosity drawn together by anglers and Ripple Fisher for the past 27 years.

Curiosity is our driving force.

Let's continue to share our curiosity and sprit together.

## MORE ABOUT JIGGING MODELS

### <Explanation of Ripple Fisher's Jigging Rods>

Ripple Fisher's jigging category will consist of three categories, including Selfish, Ocean Arrow, and the newly added Agile, which will be available in the fall of 2025. Each series has its own characteristics and bending depending on the anglers purpose and target. This page explains in detail the characteristics of each series for your reference when choosing a rod.

### Characteristics of each series of Ripple Fisher's Jigging Models

#### OceanArrow SELFISH

Selfish series is divided into categories that can be used for three different actions: bouncing the jig, swimming, and lightly maneuvering. All categories are equipped with the sensitivity to decipher the slightest changes in the current for anglers to control the action of the lure for that instantaneous moment. Rather than seeking the performance of light one-pitch jerking, we were after rods which allow anglers to enjoy the process of technical jigging maneuvers by sensing for the changes under the water. We proudly recommend the Selfish series for anglers who wish to delve deeper into the technical jigging game.

#### OceanArrow

The Ocean Arrow series has a taper design that provides power and strength required for serious battles with sizeable fish. This series consists of three categories, the BFT, DTT and AMJ. The BFT is characterized by a "fight oriented" design that emphasizes the anglers ability to fight comfortably. The DTT, which is characterized by a "high-powered" design that can forcibly stop the powerful fish busting you off on the reef. And the AMJ, which is characterized by a "multi-purpose" rod that provides torque with a light feel to it.

#### OceanArrow AGILE

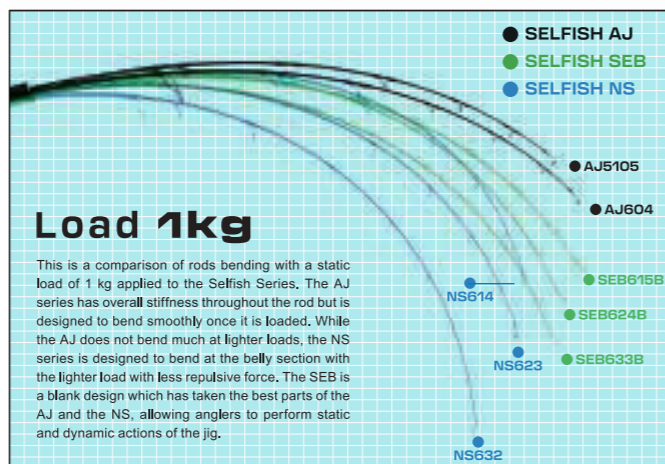

The new Agile series was developed to allow anglers to further enjoy jigging through the use of lighter line setups. There are no restrictions on the field or target and the anglers imagination and technique can bring out infinite possibilities with these rods. All rods in the series and built up of blanks which are highly versatile allowing anglers to maximize the benefits of light lines. You may choose it as your main weapon or as a spare tackle for your more exotic expeditions.

#### OceanArrow SELFISH

POWER CLASS  
HIGH  
MEDIUM  
LIGHT

#### SELFISH Series

Characteristics of Selfish series

\*Static load comparison does not represent all rod characteristics such as force of recovery. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guideline only.

### Compatible jig weight quick reference table

\*The comfort weight described in the SELFISH series is considered to be the most manageable weight, but actually, it is possible to use a wider variety of weights. Please refer to the graph below.

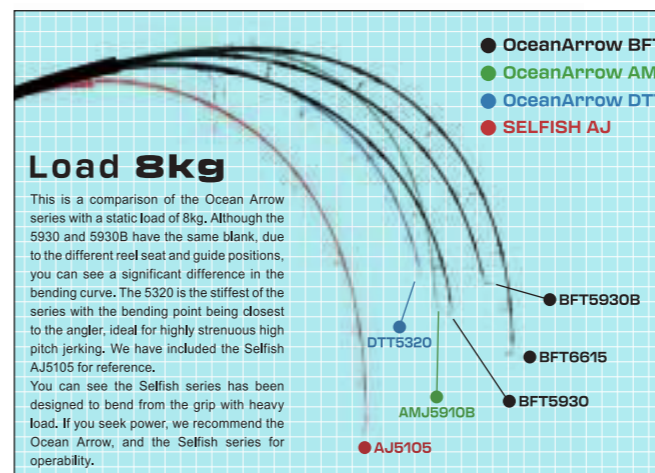

In the table above, the darker the colour gets, the easier it is to use the rod. For jigging, the ideal jig weight will vary depending on the depth, shape of jig, and tidal condition, so please use this as a reference only. Since the stiffness in the AJ series is strong, anglers will be able to utilize lighter jigs when the tidal pressure is low with the minimum output of the rod action. The NS series can be used for swimming actions of lighter jigs in shallow areas with little water pressure with the belly section of the rod while the butt section will help anglers maneuver heavier jigs.

#### OceanArrow

POWER CLASS  
HIGH  
MEDIUM  
LIGHT

When the fish is far away and the line is slanted, depending on the stiffness and tenacity of the rod series, it is possible to hold the rod up to the angle shown in the diagram above and apply pressure to the fish. If the fish is close to under the boat, please try not to set the rod too high. If you do so while the fish turning under the boat, a huge load will be applied to the blanks and it may cause of breakage. Please do not keep the rod too high angle, especially when landing, so control the fish by holding the rear grip under the arm.

\*Static load comparison does not represent all rod characteristics such as force of recovery. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guideline only.

#### OceanArrow AGILE

POWER CLASS  
HIGH  
MEDIUM  
LIGHT

Agile was created to enjoy the subdivided game of light jigging in a Ripple Fisher like way. Even if it is called light jigging collectively, it is not easy to cover all of them due to the types of lures and regional characteristics. What we wanted from Agile was to use application rather than expertise, and not to limit the degree of freedom of the angler. Adapt to the situation with a wide variety of lures and enjoy the wide and deep world of light jigging.

#### BFT BLUE FIN TUNA

A model designed specifically for bluefin tuna. The 5930 is effective for luring your target with heavy drag jigs and inducing bites through free falling of the jig. If the tides are not cooperative and complex, you can use the 6615 to lightly cast your jig. In addition, the rod can be high stuck during a fight to reduce the stress on the angler for long gruelling fights. The rod feels like the BIG TUNA casting rod but the short length of the rod allows for an easier fight for the angler. However, you must be careful not to apply too much pressure with lighter line class as the power of the rod may cause a line breakage.

#### AMJ AMBERJACK

A model designed for multiple targets such as amberjack, yellowfin tuna and grouper. It combines easy handling of jigs in deep areas while being able to withstand the powerful thrashing of large species. Compared to the DTT, the rod has less stiffness and will allow anglers to easily handle jigs while being tenacious for various species in the depth. As the rod bends tenaciously compared to the Selfish series, you can differentiate your style of fishing.

#### DTT DOGTOOTH TUNA

A model designed specifically for bluefin tuna. It boasts overwhelming blank rigidity to apply maximum pressure on the bluefin tuna that swim straight towards the rocks. In addition, by making it a short length rod, it allows lighter handling of heavy jigs. We recommend you choose the DTT when targeting large fish at drop-offs and points with rouged rocks, and BFT for deep areas with relatively flat bottoms.

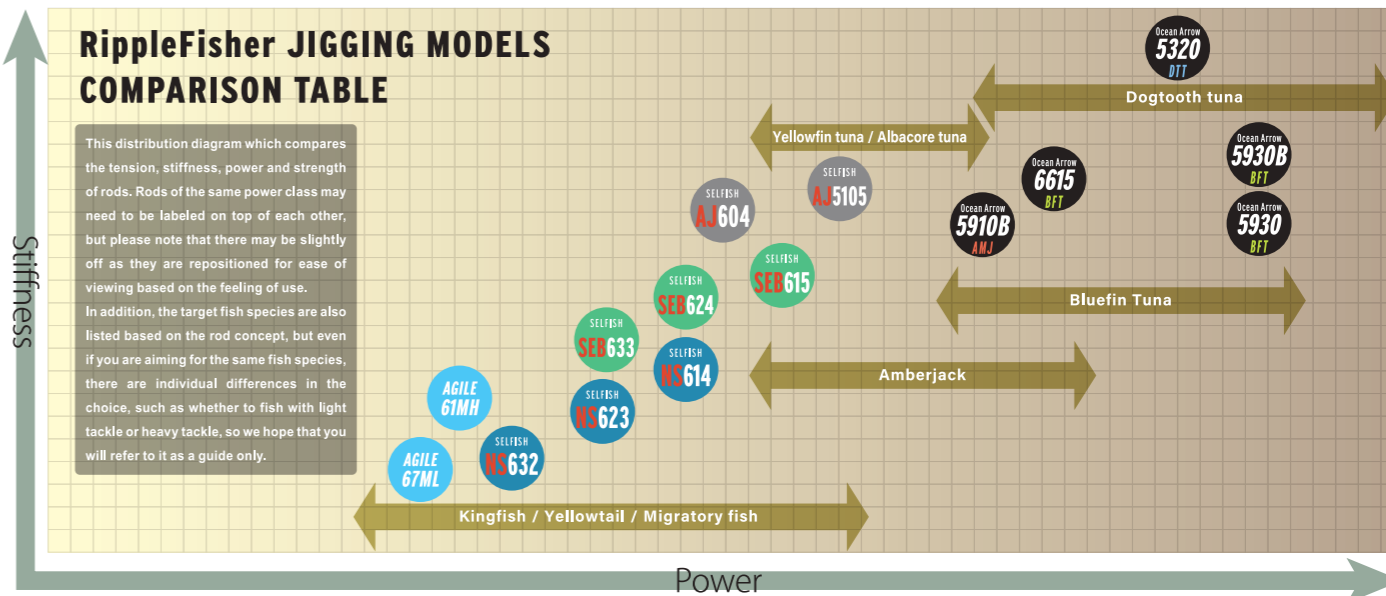

### To get to know OceanArrow more

- The Ocean Arrow has very strong torque and outstanding butt power compared to the Selfish. Therefore, we recommend the Selfish series for anglers who easily tire from jigging all day and the Ocean Arrow series for those who need to stop the violent species from busting you off on rocks or areas with massive sharks.
- The Ocean Arrow BFT series is designed for anglers to high-stick the rod during the fight. In addition, the rod end is designed with a special gimbal allowing easier jerking of heavy weight jigs from the fighting belt. Depending on the situation and jig weight, anglers can jig from your armpit or from the gimbal.

### RippleFisher JIGGING MODELS COMPARISON TABLE

This distribution diagram which compares the tension, stiffness, power and strength of rods. Rods of the same power class may need to be labeled on top of each other, but please note that there may be slightly off as they are repositioned for ease of viewing based on the feeling of use. In addition, the target fish species are also listed based on the rod concept, but even if you are aiming for the same fish species, there are individual differences in the choice, such as whether to fish with light tackle or heavy tackle, so we hope that you will refer to it as a guide only.

## AS YOU LIKE

To perform the ideal action

When it comes to jigging, casting distance is not an issue. It is generally the elevation or sinking of your jig that attract the fish and you can vary your jerking or alternate the speed of your jig. Jigging is so simply yet profound. It is interesting as your fishing results vary greatly depending on your technique and the high reproducibility of your results. How can you set yourself apart from your fellow anglers on board? It's a good idea to look for patterns and try different methods and techniques. By feeling the invisible changes in the sea and interpreting them, you can add action to the jig, and lure the fish. This is the real challenge and fun of jigging.

Ripple Fisher's jigging rod series "SELFISH" is a series that places emphasis on fully enjoying jigging and the process of catching fish. This rod series can be used easily all day, with excellent operability and sensitivity. After the fish is hooked, the slender yet highly resilient blank bends as a whole, lifting the fish quickly while suppressing the fish's thrust. The AJ (Aggressive Jerk), a new category in the SELFISH series in 2025, is characterized by its high jig operability and highly responsive blank. These rods are good at giving accent to the action through stillness and motion of your jig while feeling for the movement of the currents. This series allows the angler to use the rods at their will and enjoy the whole process of jigging as a whole.

The NS rods allows you to move the jigs naturally while the SEB rods are designed for technical maneuvering with bait-casting set ups. The SELFISH series consists of these three subdivided categories and are rods that will allow you to enjoy a variety of jigging techniques.

SELFISH SEB615

# SELFISH 2025 LINEUP

3 CATEGORY / NEW MODEL X3

2025 NEW CATEGORY

## SELFISH AJ / Aggressive Jerk

The Aggressive Jerk series excels at high speed and sliding action jigs. These specialized models allow the angler to tirelessly do vertical jigging without losing the sensitivity even in deep waters or areas with fast flowing currents.

### 2025 NEW SELFISH AJ 604

This model allows you to take advantage of the rod's repulsion and high action response without exerting unnecessary force. This is especially helpful in areas with fast flowing currents. It is also able to bring about reaction bites from super high speed jerking with your spinning setup or pinpoint jigging on top of manmade fishing reefs and physically stopping them from busting you off.

### 2025 NEW SELFISH AJ 5105

This is a high-resilience model specialized for vertical jigging in areas with fast flowing currents at depths of 100m or more. While it is a highly powerful rod, it also retains the light maneuverability of the SELFISH series and high sensitivity to gauge the tidal pressure. Even when aiming pinpoint on rough terrain or around manmade fishing reefs, the short length rod allows for a quick response while boasting outstanding butt power for hooking fish in deep areas. Anglers will be able to comfortably fight massive species and areas where there are plentiful sharks.

## SELFISH SEB / Sensitive Bait

These are highly responsive overhead reel models able to easily maneuver jigs simply or technically with various jerking methods. Anglers will be able to easily vary the tempo and speed of jerks capitalizing on the advantages of the overhead reel tackle set up.

### 2025 NEW SELFISH SEB 615

It is a bait model that supports a wide range of methods, such as pinpoint targeting in the fast flowing currents and deep waters, as well as loose action involving fine pitch adjustment unique to bait-casting reels. At depths of 100 m or more, the belly to butt section of the rod can be used as a fulcrum to bring out the high repulsive force of the blank allowing for a more lively action of your jig. Despite having a slender blank, it has enough butt power to control the intense running of the fish during the fight.

### SELFISH SEB 633

The standard model of the SELFISH Overhead reel series - built up with controllability and sensitivity as the foundation - is equipped with the ability to handle various jerking patterns vital for overhead reel setups and blank settings which support the angler when reeling up a heavy load. By eliminating the wobbling of the blank after the jerk and giving it moderate stiffness, the rod responds well in high-pitch or combination jerks. In addition, anglers are also able to utilize slow tempo jerks which focus on the falling of the jig to induce the bite. Once the blank is loaded, the rods bends over nicely and the resilience will allow the angler to take initiative. This versatile rod is the standard model of the series ideal for vertical or diagonal jigging in your local waters or exotic fishing trips.

### SELFISH SEB 624

With the basic characteristics of the SEB633, we have set the bending point farther towards the tip and sharpened its manual maneuverability. The strength of the blank is capable of sharply maneuvering jigs up to 220g. This model is built with highly sensitive characteristics and to easily control the jigs and induce a bite when the angler can feel for a fish in pursuit, change in the layer of current or a subtle bite. The reinforced butt power will control the massive thrashing of the fish running towards artificial fish reefs and rough rock formations while the powerful resilience and reeling by the angler will crank up 10kg class Kingfish.

SELFISH NS632

SELFISH SEB615

## SELFISH NS / Natural Swim

A series especially designed to naturally maneuver the jig by eliminating any unnecessary flicking and jumping of the jig. The versatile multi purpose models are able to induce bites in selective situations, various sea conditions and areas.

### SELFISH NS 632

This is a technical model for anglers to utilize small jigs weighing between 80g~130g with PE#2 for those spooked targets or high pressure fields. The light maneuverability and its honed sensitivity will transmit the signal for the bite and allow the angler to efficiently control the jig. Although it is equipped with a quick handling feel, the blank is designed to bend a little when jerking the jig reducing unwanted bouncing and the loss of tension, allowing for a natural action of your jig. Even with the PE#2 class specs, the rod possesses ample butt power not only for local waters but also for trips targeting larger species. The natural action of your lure induced by the light class rod is an ideal selection for the Kingfish suspending in the mid range during the high pressure spring seasons.

### SELFISH NS 623

This is a model developed with the focus on its ability to intrigue your target by the natural action of the jig. It is designed to reduce your jig from bouncing about to perform a more natural appeal. While retaining the manual operational feel, anglers will be able to maintain the balance of the jig during its swimming action vital for inducing the bite. The responsive blank will allow anglers to easily switch the jerking pattern from the swimming type jerks using the tip section to those sliding type jerks which use the rebounding of the belly section. You could say that this would be your multi purpose model for local waters, able to smoothly adjust to tough field conditions. The butt section is tenacious and will allow anglers to go head to head with 10kg+ yellowtails (Buri) or 7~8kg Kingfish.

### SELFISH NS 614

The NS614 is a technical model designed for fishing in shallow waters between 20~40m in depth, targeting the selective adult kingfish. It is a highly sensitive model, with a flexible tip section while having a stiff belly section to feel for the action of the jig in the water. Anglers will be able to slide and control the jig by efficiently responding to the ever changing sea conditions, and control the thrashing of the monstrous kingfish with the grip-end under your armpits. It is also suitable to under-cast your lure to search a wider area and will respond quickly to those situations where the current is flowing towards you. This piece possesses numerous traits required for jigging in shallow waters.

#### About Comfort Weight

When inputting action to a jig, the load on the rod will vary depending on the jig weight, water depth, and the speed of the tide. Therefore, for SELFISH, we have indicated a range of jig weights that will not impair action input under any circumstances. Since this is not the maximum weight of jigs, slight fluctuations in the lower and upper limits are not a problem. Please judge the day's conditions such as wind and tide, then pick the appropriate jig weight.

# OceanArrow

## OceanArrow / Jigging for Monster

Tuna / Marlin / Amberjack / Grouper

The Ocean Arrow series is for jigging large species anywhere in the world. For jigging, it is imperative to be able to maneuver the jig to induce the bite. However, when targeting supersize fish, you not only need to be able to induce that bite through your jig control but also be able to withstand the power and lift the monstrous species from the depths. From 2025, the Ocean Arrow series will be subdivided into three categories, and the necessary elements will be adjusted according to the target to create a more sophisticated lineup. In order to fight endurance species like bluefin tuna, BFT pursues a combination of tenacity and strength that would allow anglers to fight comfortably for a long time. On the other hand, the DTT is a model that emphasizes tension and power to stop powerful species (ie. Dogtooth tuna) that run you off on underwater canyons. The AMJ is a medium-heavy model that is easy to handle, while having a reassuring butt power against amberjack and large rock fish.

## OceanArrow BFT / Bluefin Tuna

Specializing in tuna that allows you to keep the rod high angle during fights and easily endure long fights.

Target : Tuna / Billfish Category : Heavy Class

### OceanArrow 6615

This is a two piece grip jointed spinning model designed to jig for large Tuna. Similar to the 5930, it is designed so anglers can high-stick the rod and the longer rod length is set to avoid the line from scraping the hull of the boat resulting in a break off. Although it is a PE6 class high powered jigging rod, the light feel of the rod will allow anglers to utilize various jerking patterns to induce that bite. The 6615 is a rod that will be useful in various locations around the world and for various species with power to control the thrashing fish, tenacity to continue to apply pressure on the fish and highly well balanced to maneuver the jigs.

Recommended size of tuna: Up to 50 kg

### OceanArrow 5930

This is a one piece spinning model designed to jig for large size Tuna and Marlins around the world. The short length rod able to be high sticked will be advantageous for the angler at critical times when the fish is directly beneath the boat. The beautiful bending curve of the one piece blank allows anglers to maintain the high stick position which will continuously apply high pressure on the fish while reducing the load on the angler side. It is ideal for slow pitch jerk, one pitch jerk and other jerking patterns focusing on the sinking action of the heavy weight jigs. Anglers can also utilize the fighting belt to jerk or set the grip end under your armpits.

Recommended size of tuna: More than 50 kg

### 2025 NEW OceanArrow 5930B

This is a one-piece bait casting model for targeting tuna. The blank is the same as the 5930 spinning, and the stiffness has increased by making it a bait casting model. This model features a regular tapered action, which is suitable not only for vertical jigging, but also for live bait fishing and trolling. Even when jigging in strong currents or deep trenches, anglers will be able to comfortably utilize long jigs of 200 ~ 800g.

Recommended size of tuna: More than 50 kg

## OceanArrow AMJ / Amberjack

A highly versatility that can be used for amberjack, yellowfin tuna, and large grouper.

Target : Amberjack, Large groupers, etc. Category : Medium Heavy Class

### 2025 NEW OceanArrow 5910B

This is a grip jointed two-piece bait-casting model designed for various species such as amberjack and grouper. It is highly portable and allows anglers to swiftly jerk their jigs in fast flowing currents of exotic fishing destinations. It is also equipped with outstanding butt power to stop the fish from running you off on the rocks.

## OceanArrow DTT / Dogtooth Tuna

A category aiming for monsters with outstanding blank rigidity and lift speed.

Target : Dogtooth Tuna Category : Heavy Class

### 2025 NEW OceanArrow 5320

It is a regular fast-taper action model designed to target monster-sized dogtooth tuna. This rod has strong overall stiffness and a very high action response thanks to its short length, making it possible to operate heavy jigs lightly even in strong currents. It is equipped with ample butt power to forcibly stop fish that run towards the rocks during a fight. We recommend anglers to put their weight behind the rod during the fight to maximize its potential.

ROD DETAIL Please refer to the list on page 62 to check details of rod specifications.

Reel Seat : Spinning Model DPS20 (Fuji)  
Bait Model T-DPS22 (Fuji)

※A=Whole length of grip  
B=Length from reel foot to end of grip when reel is equipped

About specs of end of grip  
The standard specification for the Ocean Arrow series are equipped an aluminum gimbal (with rubber cap). You can also specify BRC specifications when ordering. Grip end specifications can be changed even for purchased products.  
\*From January 2025, the grip end specifications will be changed and the replacement cost will be changed. Please contact us for details.

# RIPPLE FISHER

## MORE ABOUT BOAT CASTING MODELS

### <Explanation of Ripple Fisher's Boat Casting Rods>

Ripple Fisher's boatcasting category consists of a total of five categories: Big Tuna, Aquila, Ultimo, Ocean Ridge and GTX. Each series has its own characteristics, and is used for different purposes. This page explains in detail the characteristics and condition of each series for your reference.

### Aquila

Kingfish / Yellow fin tuna / Spanish mackerel

The Aquila series is mainly for targeting kingfish, yellowfin tuna, and mackerel, and is in the middle class power of Ripple Fisher's offshore lineup. The series is divided into four categories: the "MLT" for small bait patterns, the "MST" for large bait patterns, the "ST" for the super sharp blanks, and the "EX" for multi piece models.

### OceanRidge BIG TUNA

Blue fin tuna / Yellow fin tuna

The BIG TUNA series is characterized by its resilient blanks that have the torque and power required to fight large bluefin tuna to yellowfin tuna. The lineup includes a power model that allows for a speedy fight, and a flexible model that allows for a slow fight, with a total of eight models in the lineup, so anglers are sure to find a model that suits their physical strength.

### Ultimo

GT • Kingfish(Large)

The Ultimo series is designed for using diving pencils and diving poppers to target GT and large yellowtail. It has a flexible tip, which enables anglers to easily control lures without them jumping out of the surface, and the high versatility allows you to use a wide variety of lures. In addition, the powerful 4 models in the lineup will allow anglers to put their body weight behind the rod to expedite their fight against your monstrous targets.

### OceanVoyager GTXpedition

GT • Kingfish

The GTX series is a 3 piece pack rod series for targeting GT and large kingfish. It is a highly versatile design that can handle a variety of lures, from poppers to diving pencils. These rods come in handy when traveling overseas or to remote islands where your baggage is limited. They have a smooth bending curve that you wouldn't expect from a 3 piece rod. (Stored size : 887mm)

### OceanRidge GT

The OceanRidge series is designed for targeting GTs with poppers. The tips of these series are built stiff to enable anglers to create a big splash with the popper. The four models are powerful for anglers to put their weight on the rod to efficiently lift the GT away from the rocks. Among them, the FinalSpirit is a model with even more stiffness.

## Aquila

The Aquila series is divided into four categories with clear concepts. Choose the one that best suits your situation and style.

**MLT MULTIPURPOSE**  
This model was developed to utilize small pencil type lures for tiny bait patterns such as whitebait.

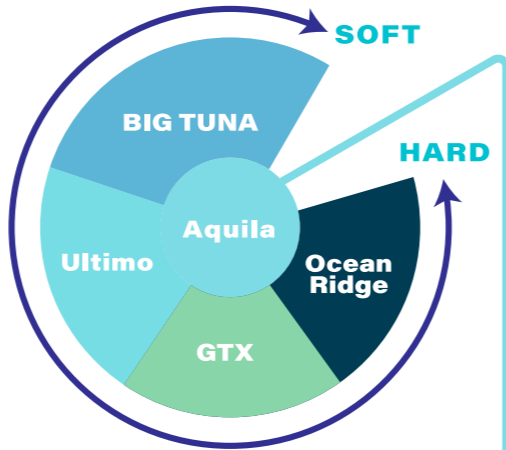

**ST STANDARD**  
A highly balanced and versatile model developed to target a wide range of fish.

**MST MONSTER**  
This model was developed to utilize large lures up to 220g when your targets are feeding on large baits such as dolphin fish or needlefish.

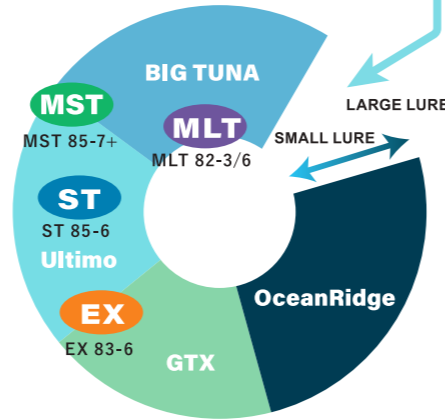

**EX EXPEDITION**  
An expedition model that combines the portability of a 3 piece rod with uncompromising rod performance.

### Characteristics of Boat casting series

#### Boat Casting Series

Aquila is divided into four categories, so, please see the table below for more information.

#### Aquila PE6~

Example: Characteristics of Aquila PE6 class

Comparing Aquila's PE6 class in each category with the boat casting category, the characteristic distribution will be as shown in the figure on the right.

## OceanRidge BIG TUNA

We recommend using different rods according to the bait pattern and target size of the BIG TUNA series, but here we will explain how to choose a rod that suits your strength and how to position yourself to maximize the blank's performance. \*For detailed characteristics of each model, please see the BIG TUNA page.

### BIG TUNA FIGHT STYLE

- Slow Fight**  
Use a rod that will bend deeply. Hold the rod upright and use the blank's bending force to slowly bring the fish to the surface. Recommended for those with less body weight or physical strength.
- Speedy Fight**  
For those who are confident in physical strength or who have sufficient body weight, it is recommended to use a stiffer rod which will have a shallower bend for a speedier fight.

Class	Model	Model	Model
Light Class ~PE6	85F		
Middle Class ~PE8	87AS	83	
Heavy Class ~PE12	86	710RT	
Power Class ~PE12	76	73	70

◀The 85F and 87AS have a deep bending margin and are classified as slow fight rods in the series. As these rods absorb the load, they are recommended for those who are not confident in their physical strength or who are light in body weight.

◀The 83, 86, 710RT, and 76 are middle class models. They are easy to use for people with a certain level of build and physical strength.

◀The 73 and 70 are classified as speedy fight rods because they bend relatively little. When used by heavy or physically fit anglers, they achieve speedy results.

\*Depending on the size of your fish, it may not suit the rods repulsive force. Please select a model most suitable for your target size.

\*Please be sure to read "About the fighting angle of your rod with different stiffness and tenacity" on page 17.

## Ultimo

This is Ripple Fisher's all out casting rod series that combines superior casting distance imperative for the casting game, with contradicting characteristics of light handling and outstanding lifting power.

	Characteristics	Target Fish / Expected Situations
<b>82ML</b> ~PE6	Specialized for the swimming action of diving pencils To be used with 180-240mm diving pencils. Light weight and comfortable light casting feel	For kingfish, yellowfin tuna, and light GT High precision casting on surface feeding frenzies Luring game with emphasis on superior distance and efficiency
<b>83M</b> ~PE7	Quick action Sharp and exhilarating operation of the rod For diving pencils and diving poppers	For large kingfish and GT Stronger restoring force than the Aquila series, enabling anglers to put their weight behind the rod High lift power for kingfish in shallow areas and fast flowing currents
<b>710MH</b> ~PE8	Suitable for medium to large lures over 220mm High response and excellent casting Ideal for performing long jerks with bubbling lures	For large kingfish and large GT Easy to search a wide area with large, appealing diving pencils and poppers Easy to use from the stern with its short length for maneuverability and casting
<b>86M/B</b> ~PE7	All-purpose High manual performance unique to bait-casting tackle Great line release enabling the use of various line-systems	For large kingfish and GT allows for a long leader system ideal for SS Assist and sea-hunter (super strong abrasive line) systems for an aggressive fight

	LARGE MOUTH POPPER	MEDIUM MOUTH POPPER	SMALL MOUTH POPPER	DIVING POPPER	DIVING STICK BAIT	SINKING PENCIL
82ML	—	—	△	○	◎	○
83M	—	△	○	◎	◎	◎
710MH	△	◎	◎	◎	◎	◎
86M/B	—	△	○	◎	◎	◎

## OceanVoyager GTXpedition

While it has been designed with a short storage size of 887mm for your exotic adventures to the remote parts of the world, its castability and fighting performance is comparable to that of a 2 piece model. This multi piece series is the crown jewel of Ripple Fisher's technical capabilities.

The size of fishing rods that can be checked in varies depending on the airline and aircraft. We recommend that you check with the airline in advance.

	Characteristics	Target Fish / Expected Situations
<b>81M</b> ~PE6 Wt: 55kg~	Easy to bend, excellent repulsion, light casting feel Specialized for quick operation of diving pencils and diving poppers Highly responsive fighting characteristics through the repulsive blank	For kingfish and GT great for species that respond well to high-speed action of diving pencils High lift power for kingfish in shallow areas and fast flowing currents
<b>81MH</b> ~PE8 Wt: 65kg~	Stiff and crisp cast feel Sharp handling performance of sinking pencil and medium-mouthed poppers allows for aggressive fighting against target with its powerful stiffness	For large kingfish and large GT Easy to search a vast area with large lures and poppers with high appeal For GT in shallow areas and fast flowing currents

	LARGE MOUTH POPPER	MEDIUM MOUTH POPPER	SMALL MOUTH POPPER	DIVING POPPER	DIVING STICK BAIT	SINKING PENCIL
81M	—	○	◎	◎	◎	○
81MH	○	◎	◎	◎	○	◎

Wt: = Recommended Angler's Weight

## OceanRidge

This series is specialized for GT games, and features overwhelmingly high repulsive blank compared to others. The butt section has outstanding power to fight against GT for a short and efficient fight, so we have set a recommended angler weight.

	Characteristics	Target Fish / Expected Situations
<b>R80</b> ~PE8 Wt: 65kg~	The most versatile of the series Strong stiffness and lifting power, yet easy to load the weight of the fish Ideal as your first rod in the OR series	For spooked fish that require delicate approach with smaller 100g lures For anglers who frequently use with diving pencils and poppers
<b>LC82</b> ~PE8 Wt: 70kg~	Specialized for long distance casting High pivotal point for sharp casting feel and maneuverability high tenacity for excellent lure control and lifting power	Great long distance casting ability for areas boats cannot access or approach Situations where you are forced to cast against the wind
<b>PF711</b> ~PE10 Wt: 70kg~	Short length and easy to bend Able to lightly perform long jerks with bubble-biting lures over 150g Suitable for well built and heavy anglers	Great for fishing in deep water areas using sinking lures Or for short, efficient fights in shallow and fast flowing areas For anglers targeting species larger than 40kg
<b>FS78</b> ~PE12 Wt: 80kg~	The strongest lifting power and strength of the GT series The strongest stiffness makes it easy to operate large-mouthed poppers Suitable for well built, heavy or expert anglers	For the toughest GT areas such as ultra-shallow areas (-10m depth) and ultra-strong currents. Situations where anglers are required diving pencils over 300mm or large mouthed poppers.

	LARGE MOUTH POPPER	MEDIUM MOUTH POPPER	SMALL MOUTH POPPER	DIVING POPPER	DIVING STICK BAIT	SINKING PENCIL
R80	—	○	◎	◎	◎	◎
LC82	○	◎	◎	◎	◎	◎
PF711	◎	◎	○	○	○	◎
FS78	◎	◎	△	△	○	◎

Wt: = Recommended Angler's Weight

When the fish is far away and the line is slanted, depending on the stiffness and tenacity of the rod series, it is possible to hold the rod up to the angle shown in the diagram above and apply pressure to the fish. If the fish is close to under the boat, please try not to set the rod too high. If you do so while the fish turning under the boat, a huge load will be applied to the blanks and it may cause of breakage. Please do not keep the rod too high angle, especially when landing, so control the fish by holding the rear grip under the arm.

## RippleFisher BOAT CASTING MODELS COMPARISON TABLE

This distribution diagram which compares the tension, stiffness, power and strength of rods. Rods of the same power class may need to be labeled on top of each other, but please note that there may be slightly off as they are repositioned for ease of viewing based on the feeling of use. In addition, the target fish are displayed according to the rod concept, but there are individual preferences with regards to your fishing style. Anglers may prefer a light approach or head-on heavy tackle approach towards your targets, so please use it as a guide only.

OceanRidge  
**BIG TUNA**  
 JAPAN Special

With the help and know-how of anglers and charter boat captains, our collective data has expanded and the evolution of tuna fishing has grown exponentially.

We can confidently say that tuna species, domestically or internationally are the biggest and strongest targets we face today. So what can Ripplefisher do to help as a manufacturer realize the anglers' dreams and challenges? What do anglers seek? These are questions we ask ourselves daily and through countless trial and error, the BIG TUNA series was developed.

Rod making is a continuous challenge and has allowed us to grow as a rod manufacturer. The "BIG TUNA" must be a series that will continue to effect anglers in the ever-changing environment and lead a path forward to the future.

We have upgraded and optimized these models to cater for the ever-changing needs and environment around us.

We did not simply make it more bendy nor make it cast farther than before. Rather, through the combination of various different materials of carbon sheets and unique taper design with underlying butt power, we were able to realize a rod capable of enduring extreme load while the recovery force lifting the fish from the deep.

We hope you feel our dedicated passion through the blanks of BIG TUNA series.

## BIG TUNA POWER CATEGORY

Power Category	Model	Line Class	Lure	Drag Max
Light Class	<b>85F</b>	PE3~6	18~120g	10kg/45°
Middle Class	<b>87AS</b>	PE5~8	40~150g	15kg/45°
	<b>83</b>	PE6~8	40~150g	15kg/45°
Heavy Class	<b>86</b>	PE8~12	40~160g	15kg/45°
	<b>710 RT</b>	PE8~12	40~160g	15kg/45°
Power Class	<b>73</b>	PE8~12	60~180g	18kg/45°
	<b>76</b>	PE8~12	60~180g	18kg/45°
	<b>70</b>	PE10~12	80~220g	18kg/45°

BIG TUNA76

We have set the power category as follows in order for a more comprehensive understanding.

The 86, 710RT, 73, 76, 70 are all in the same line max category however the 73, 76, 70 have been designed with a higher breakage point suited for targeting 200kg class fish which are in a different power category from 86 and 710RT.

The 86 and 710RT models can be used in situations where a long cast is required or more sensitive action is required.

\*Please note that aiming huge tuna over 100kg in rough conditions is dangerous. Regarding "models that are designed for extremely large bluefin tuna" such as BIG TUNA73, 76, and 70, the explanations and specifications are written assuming that you have the appropriate physical strength, training, and experience. Thank you for your understanding.

The 85F, 87AS, and 83 models are also useful for targeting yellowfin tuna, and the standard is 85F for tuna size 50kg or less, and 87AS and 83 for tuna size 80kg or less.

Please consider the lure size to be used, the line, the size of the tuna, and the lure appeal required, and choose a model.

\*Even though the maximum line value is the same, the set drag value will vary depending on the model, so please keep this in mind when choosing a rod.

\*If you are looking for a lighter model than the BIG TUNA series, we also recommend the Aquila series' MLT82-3/6, MST85-7+ and MLT82-3/6 does not have as strong a butt power as the BIG TUNA series, but it has an achievement of catching tuna over 50kg during testing. This model is also recommended for those who want to cast small lures when using ultra-small bait patterns such as whitebait. MST85-7+ has a short length grip, allowing for faster and more agile casting. It has excellent long-distance casting performance, so it is recommended for both shooting to fish feeding on surface and luring out.

BIG TUNA 87AS

The rod design of the BIG TUNA series is color coded with thread colors matching the power class on the left. Also, the model name is engraved on the spacer on the reel sheet of the grip.

# BIG TUNA LINEUP

## 4 POWER CLASS

### BIG TUNA 85F JAPAN Special Light Class

This is a model capable of being high stuck while also being able to cast small lures a great distance. Anglers will be able to utilize lures ranging from 18g~120g and line ranging from PE3~6. We have given this rod a wide range to deal with the high pressure from anglers as well as to induce bites when the Tuna are feeding on small baits. Although it is classed as a light rod in the lineup, you will be able to land 50kg Yellowfin and Bluefin Tuna.

### BIG TUNA 87AS JAPAN Special Middle Class

As its name suggests, the AS (Accuracy Shoot) model is designed to accurately cast lures into the feeding fish. In addition to the steady blank kick-back after casting, we have equipped two RV guides on the butt enabling an extremely smooth line ejection from the reel through to the rod. The casting ability will support anglers when the feeding frenzy is far or in heavy conditions casting into the wind. It is not only able to cast large lures but the blank will also allow the use of small 40g size lures. This middle class rod will assist anglers with its taper design ideal to slowly but surely lift the fish from the deep while being able to high-stick the rod.

※If you prefer a more speedy fight (same size fish) we recommend the 83. (87AS is 1 rank lighter compared to the 83. Furthermore, the 87AS is a totally different model and design to the 87 which has been discontinued.)

### BIG TUNA 83 JAPAN Special Middle Class

This model was developed with "lure control" and "fight" as its main focus, but it goes without saying that casting is also outstanding. It is a PE6~8 middle class rod not only able to pinpoint cast but also able to utilize small mouthed diving poppers and diving pencils required for an attack. You will be able to realize the evolution of our BIG TUNA series with its lightness and outstanding balance, allowing anglers to cast all day long. Furthermore, the bending point is set close to the body enabling anglers to easily bend in and capitalize on the butt power with little effort.

### BIG TUNA 86 JAPAN Special Heavy Class

If you require long and accurate casting with a heavy class tackle, this 86 will be your choice. In comparison to your ordinary heavy tackle, the flexible tip on the 86 will allow for easier casting of smaller lures when the bait-fish are small though the Tuna are huge. The bending point (pivotal point) is closer to the body allowing anglers to take initiative during the fight.

### BIG TUNA 710RT JAPAN Special Heavy Class

Compared to the characteristics of the original model, we have re-designed the model to suit the current tuna scene. Since we have designed the taper of the blank to be most productive in the butt section, anglers will be able to efficiently and effectively utilize the butt power to lift the tuna. It's not simply a more flexible model compared to its predecessor, but a highly well-balanced heavy class model able to effortlessly stimulate bites from casting top water lures while having the power to go head to head with the biggest of fish. This will be your ideal model if you are in situations where you need to cast lures all day long.

### BIG TUNA 76 JAPAN Special Power Class

This model is for anglers with their sights on Blue-fin tuna weighing over 200kg. Similar to the 73, this 76 is capable of not only casting large lures mostly used when the targets are feeding on dolphin fish (mahi-mahi), but also allows anglers to cast and control the lighter (60g) sinking pencils for smaller baits. The difference from the 73 will be the contrasting fight style. While possessing strong butt power to constantly apply pressure on the fish, we have drastically reduced the load on the angler by bringing the bending point closer to the angler, allowing for a prolonged fight.

### BIG TUNA 73 JAPAN Special Power Class

This model is for anglers with their sights on Blue fin tuna weighing over 200kg. Its castability is next to non, able to accurately hit feeding targets with large lures most productive when they are feeding on dolphin fish (mahi mahi). Being short in length and the stiffest model in the series, it is most suited for anglers who have confidence in their strength and ability to go head to head with the monstrous tuna.

### BIG TUNA 70 JAPAN Special Power Class

This is for those anglers with their sights on super monstrous Blue-fin tuna. It is model for anglers who need to "high-stick the rod" to load the blank or utilize the "straight pumping" fight style. The power of the rod is similar to the BT76 and BT73 but the breaking point is much greater compared to these two. With the shorter designed blank, the bending point is set closer to the body, drastically reducing the load and stress on the angler. It also has enough length and leverage to go around the bow or other obstacles on the boat for a smoother fight.

ROD DETAIL Please refer to the list on page 62 to check details of rod specifications.

Reel Seat : DPS20 (Fuji)

※A=Whole length of grip B=Length from reel foot to end of grip when reel is equipped

#### About specs of end of grip

BRC is equipped for 85F, 87AS, 83, 86, and 710RT as standard, and aluminum gimbal (with rubber cap) is equipped for 76, 73, and 70 as standard. You can exchange it by specifying BRC or gimbal specification when ordering. Grip end specifications can be changed even for purchased products. \*Grip end specifications and replacement costs will change from January 2025. Please contact us for details.

## BIG TUNA Bending Curve

The 85F and 87AS are more flexible able to cast small lures and designed for a more mellow fight with the fish, whereas the 83 and 86 are a more aggressive rod with the bending point towards the tip to efficiently lift and fight the fish. Compared with the same middle-class rods of 87AS, the 83 is a one rank stronger rod.

The 85F and 87AS are more flexible able to cast small lures and designed for a more mellow fight with the fish, whereas the 83 and 86 are a more aggressive rod with the bending point towards the tip to efficiently lift and fight the fish. Compared with the same middle-class rods of 87AS, the 83 is a one rank stronger rod.

The illustration shows the comparison of the 2 heavy class rods. Both rods have a similar taper design but the difference lies in the length. By utilizing the length of the 86 blank, anglers will be able to cast farther than other shorter rods while the shorter 710RT is a model able to load the blank with the weight of the fish with ease.

The picture illustrates the comparison of the 3 power class models. When looking at the comparison with a 45 degree angle, the 73 and 76 look similar, however, the bending point of the 76 is closer to the angler, reducing the stress on the angler, while the 73 is further away enabling a more speedy fight against the fish. The 70 has the strongest butt power with the bending point being close to the angler, drastically reducing the load on the angler. The three models are the same power class, yet having totally different characteristics.

※when choosing a tuna rod, please be sure to choose the most suited rod depending on your height, weight, strength and experience.

**VARIOUS BOAT CASTING TACTICS**

# Aquila

Aquila / Boat Casting

## Aquila Boat Casting

Spanish mackerel / Bonito / Kingfish / Yellowtail / Yellowfin Tuna

In our lineup of Aquila are 11 models. We have categorized them into four different series, ST, MLT, MST and EX.

The ST series are the most standard models, which are well balanced and fine honed to cater for various situations and various targets.

The MLT series have a combination of a flexible tip section and a stiff butt section to go after massive fish with light line. The MST series are the already popular models to go after monstrous Kingfish with sheer power and strength. The EX series are 3 piece pack rods for anglers traveling around the world.

The Aquila series are rods built to defy the boundaries of fishing. It was our quest to seek lifting power, easy handling of lures, outstanding castability and last but not least, the ability to parry the angry fish.

We don't simply make rods with "power", we make rods with "strength".

## Aquila MST / MONSTER

The Aquila MST series have been designed for those anglers with their sights on monstrous Kingies. The main purpose of these rods are to enable anglers to go head to head with supersize fish with the use of strong PE7-8 class line and large lures for situations when the targets are feeding on large bait fish like, dorados, needle fish, flying fish etc. These rods are not just a stiff stick with power. On the contrary, in order to deal with sudden dives of the Kingfish, they have been designed with the bending point to transfer towards the angler as more load is applied to the blank. It is a user friendly rod for any angler to use as you can load your weight on the rod by bending your knees during the fight.

※The + symbol next to the power class indicates that the power and tenacity has been added to the usual power class.

### Aquila MST 85-7+

This is a model for anglers targeting supersize Kingfish with the use of 40g-120g lures. Although it is categorized as a power model, the lightness of the rod will allow anglers to cast all day long and freely pursue the lightning speed Kingfish. As the bending point transfers towards the angler once hooked up, anglers will be able to conduct a steady fight by countering your body weight against the fish by lowering your hips and loading the rod even when you're almost against the bow railing. Furthermore, the length of the rod will also assist you when conducting long casts towards feeding tuna.

### Aquila MST 711-8+

This model is especially designed for anglers who face the dorado pattern, requiring them to utilize large lures up to 180g for the supersize Kingfish. It is also ideal for those anglers who like to go head to head with powerful fish in shallow areas. The underlying power of the rod also allows you to utilize this rod for the GT game. Compared to the ordinary GT rods, this rod will bend over more naturally, which is ideal for smaller/shorter and even female anglers.

### Aquila MST 82-9+

In the ever evolving Kingfish game, the need to use large lures has increased with the target feeding on large size bait-fish. The MST82-9+ was designed to enable anglers to fully-cast lures exceeding 240mm while easily controlling and maneuvering these mammoth lures. Furthermore, the Aquila MST series are especially designed to tenaciously bend in while demonstrating outstanding lifting power when fighting against monstrous Kings in rough terrain and gushing currents. Although we have designed the rod with easy utility, it is the strongest of the series and one will require ample body strength and experience to maximize its true potential. Having said that, we are confident that this rod will help anglers in the toughest of conditions, against the biggest of fish while using these large lures. We present this rod for those who are seeking monster class Kings around the world.

## Aquila MLT / MULTIPURPOSE

The Aquila MLT series were developed for situations where your targets are feeding on super small baitfish (white bait) and require anglers to utilize lighter tackle or for situations where the fish are highly sensitive towards fishing vessels and require anglers to cast long distances. You can say that we had to fuse together contradicting features of casting and controlling light lures while possessing the power for large species and maintaining the initiative of massive fish during the fight. It is a new generation of rods designed to catch large species with light tackle, requiring anglers to maximize the strength of the line. This line-up of rods compliments the compilation of models produced for our off-shore series.

※The 2/4 notation on the rod means the tip section is a PE2 class while the butt section is PE4 max. (3/6 means the tip is a PE3 class while the butt is a PE6 class)

### Aquila MLT 82-2/4

The MLT82-2/4 has a tip section of a PE2 class, enabling anglers to accurately cast and control small ~ super small lures. It is an ideal model to overcome the challenging game where the white-bait are on the targets main menu. With its outstanding casting ability and controllability of the small lures, anglers will be able to reach great distances when casting and won't spook the fish from the presence of the boat. Although the tip section is light, the PE4 class butt section will enable anglers to maintain the initiative during the fight and lift the fish efficiently. Its versatility will allow anglers to target and land various species from the blue-runners, bonitos, dorados, and tuna. We hope this rod will assist those anglers who have been itching to cast smaller lures, farther, wider and with lighter line to catch your dream fish.

### Aquila MLT 82-3/6

This is a model with increased power to PE6 class compared to the MLT82-2/4, but for use with small lures and light line. The tip section has the flexibility of a PE3 while the butt section possessing the power of a PE6. When comparing to the ordinary PE6 class rod, anglers will be able to swing through with less effort while increasing the accuracy and casting distance. The blank will bend over nicely once loaded yet possessing the underlying power to stop the monstrous fish. During the testing of this model, we were able to catch a 47kg yellowfin tuna in less than 10 minutes with a PE4 line. With the contradicting features of power (for lifting the fish) and flexibility (for casting and controlling smaller lures), you could say that this rod is at the pinnacle of Ripple Fishers' rod making technology.

ROD DETAIL Please refer to the list on page 62 to check details of rod specifications.

Reel Seat : DPS20 (Fuji)  
※A=Whole length of grip  
B=Length from reel foot to end of grip when reel is equipped

### About Comfort Weight

In the Aquila series, the Lure specs are listed as comfort weight. This is because the weight that can be cast will vary depending on the volume and specific gravity of the lure, how you cast it, and the line you use. Therefore, Aquila indicates the weight range that can be cast without stress. Since this is not the maximum value, slight fluctuations in the lower and upper limits are not a problem.

## Aquila MLT UnderCast Handle

SHORT HANDLE/OPTION PARTS

For the Aquila MLT series, we have prepared a specially designed short handle for those anglers who need to utilize under-arm casting when boarding large charter boats. The total length of the rod is approximately 7ft 10inches with the short handle. The short handle is sold separately and does not come with the rod.

# Aquila ST / STANDARD

The Aquila ST series are models which have had all the standard yet important factors for the casting game fused together at a high dimension. Specifically, the standard performances of casting, lure maneuverability, hooking up the fish and fighting. They have a sharp feeling and once the rods are loaded with the fish, the bending curve will gradually transfer towards the angler, allowing for a steady fight utilizing the butt power to maintain the initiative of the fight. We have prepared 4 power classes of PE #2, #3, #4 and #6 to cater for various species and situations.

## Aquila ST 81-2

The model was designed to capture the selective species such as Spanish mackerel and bonitos around the bay. Focusing on the castability and operability of small lures, we dedicate this rod for those anglers who continuously cast until they hookup a fish. Once you are onto a fish, the reliable butt section will allow for a speedy fight and will help you catch great numbers especially when the feeding time is limited. It is a sharp blank typically seen in the ST series, and the belly section with ample stiffness helps easily control and maneuver the lure. This will allow anglers to utilize jerking action with minnows to induce bites from the spooked predators.

## Aquila ST 78-3

The shorter rod length is designed for easy handling and casting for use on small ~ medium size boats. The tip section has sufficient stiffness, yet allows anglers to cast smaller size top water plugs to maneuver on the surface. It is an ideal rod for targeting bonitos, yellowtails and Kingfish, which require subtle lure control with light line. For those who own boats, you can target various species with this single versatile short length rod.

## Aquila ST 80-4

This medium powered rod is your PE4 class casting rod for your local waters. Once loaded, the rod bends smoothly towards the butt section, creating a beautiful arc. Although it has a sharp feeling, the slow tapered rod is designed to bend towards the butt section to absorb the thrashing run and enable a stable fight against 10kg class Kingfish.

## Aquila ST 85-6

This ST85-6 have enough sharpness on blanks to deliver small lure like a bullet. Especially when you have to cast into boil of kingfish or tuna in head wind, you won't lose accuracy and you can deliver lure where you have wished to. It has been designed to be worked as like your arms on manipulating and provide you a stability on fighting.

**ROD DETAIL** Please refer to the list on page 62 to check details of rod specifications.

# Aquila EX / EXPEDITION

The Aquila EX series are the ultimate 3-piece expedition pack rod without compromises. Today, anglers are flying around the world to target their dream species and the farther you go, the more limitations there are regarding your luggage. Through countless trial and error, the Aquila EX series have now come to shape and ready to travel with you wherever you go. We have prepared a PE3 and PE6 class models for use with a vast range of lures with a super sharp feel to it. Although they are 3 piece models, it possesses a sharp feel to it and anglers will be able to bend and load the butt section of the rod to stop the monstrous targets. We are confident that these models will help you catch those rare species at the most remote areas around the world.

## Aquila EX 79-3

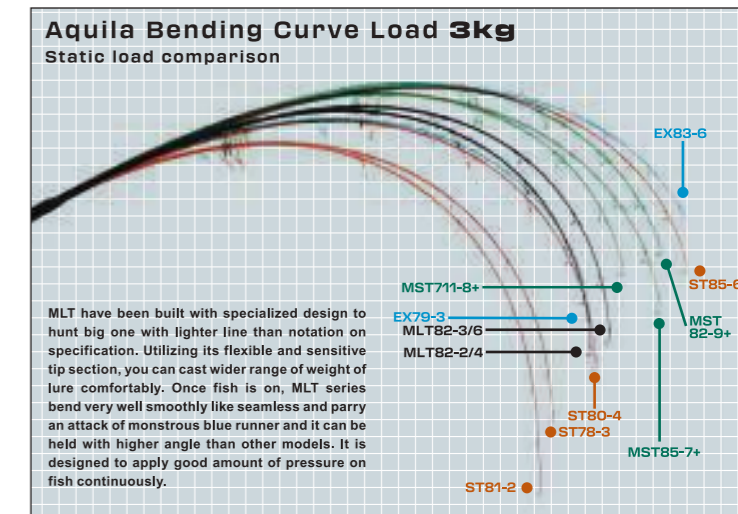

The EX79-3 was designed with its sights on targets like the Cubera snapper, Roosterfish from Latin America and other exotic species that inhabit the various Amazon ponds in Asia. As you are limited with your tackle options when traveling the world, we have created this versatile rod for use with a vast range of lures from the large jig heads, poppers and diving pencils. The rod can be characterized as being a little stiffer compared to the ordinary grip joint rods, but it is a highly responsive rod also ideal for use in the casting game targeting the bonitos and yellowtails from smaller boats.

## Aquila EX 83-6

The EX83-6 is a model ideal as a light tackle rod for the GT game or Kingfish game. Through the countless testing phases, we were able to come up with a "flexible" tip section which is extremely rare for pack-rods, enabling anglers to easily control the subtle action of middle size diving pencils. During the field-testing, the butt section was able to stop the run of the GT in shallow waters of 6m, while the rest of the rod bending and absorbing the power of the angry GT. The rod has proven itself that it can be one of your trusted main weapons for your exotic expeditions around the world.

# Ultimo

Ultimo / Boat Casting  
Giant trevally / Kingfish

The Ultimo series are the lightest in weight, highly well balanced, possess a light casting feel and armed with outstanding butt power to win over the massive fish.

We focused on its casting ability as the most important aspect which is obviously the key factor when venturing out for a casting game. The choice of carbon material and guide settings were vital and the light yet highly resilient blank possess the power suited for the needs of the recent evolution in the off-shore fishing scene.

These four models are the flagship in Ripple Fisher's boat casting rod series.

Our mission was to create rods which are lighter, cast farther, are stronger and most efficient when going head-to-head with monstrous species.

## Ultimo 82ML Spinning Model

This model is ideal for top water GT and Kingfish game for anglers to utilize diving pencils, as it is equipped with a sensitive flexible tip to reduce handling error of the lure and stiff blank characteristics seen in ML class rods. The blanks followability is extremely high as it will easily bend in as soon as the raging large fish starts running and it is designed to bring out its true strength of the butt with little strain on the angler. The lifting ability of the butt section of the rod will outperform its line-class specifications in highly rugged dangerous areas. Thanks to the medium light class blank design, the light casting feel and highly well balanced rod will assist anglers in the highly strenuous big casting game.

## Ultimo 83M Spinning Model

This will be your standard model with a total balance of casting feel, controllability and fighting performance factors required to target GT and Kingfish. Anglers will easily be able to sharply cast out diving pencils and poppers around 240mm while lightly and effectively maneuvering the lure through the manually handling blank. Once the rod is loaded with the weight of the fish, it will bend in nicely and allow anglers to put their weight behind the rod to efficiently lift the fish with the responsive strength of the blank. It is ideal for not only GT but also great for aggressively fighting the large kingfish in shallow areas.

## Ultimo 710MH Spinning Model

The sharp and stiff blank will allow anglers to easily handle large diving pencils, jerk up sinking pencils from the depths and efficiently and lightly produce splashes with medium mouthed poppers around 260mm in difficult conditions where the use of a variety of lures is required. The short length light feeling 7.10ft rod is well suited for casting from the stern of large fishing charter boats where there is little space to swing your rod around. The torque of the outstanding butt power will smoothly intensify with the weight transition of the angler enabling you to stop the massive fish and take initiative of the fight. It is a new generation power rod with contradicting characteristics of lightness and medium heavy power class which can easily be utilized by anglers with a smaller build.

## Ultimo 86M/B Overhead reel Model

The highly resilient blank was especially designed to cast farther, control and maneuver the rod and easily fight your target with ease. We were also very particular about the length of the rear grip for smoother casting and the front-grip is assembled with a rubber grip to reduce any slippage. This has helped anglers properly grip the front grip during the fight and prevent the reel from tilting downwards. The guides are large in diameter to help release the thick and long leader system with ease. With the many advantages as a bait-casting tackle, anglers will be able to consistently cast with ease and capitalize on the strong winding power of the reel. The model will open up new opportunities for anglers around the world and will not only be ideal for experts but also for beginner fishermen.

<p><b>Ultimo 82ML</b> SPINNING MODEL</p> <p>Lure / Comfort Weight <b>70~120g</b></p> <p>Line <b>MAX PE 6</b></p> <p>Drag Max <b>12kg/45°</b></p> <p>Price :</p> <p>Length: 8ft 2in Closed Length: 1790mm Weight: 362g</p> <p>Guide SIC-S Titanium Frame K Guide + SIC RV Guide(Fuji)</p>	<p><b>Ultimo 83M</b> SPINNING MODEL</p> <p>Lure / Comfort Weight <b>80~140g</b></p> <p>Line <b>MAX PE 7</b></p> <p>Drag Max <b>13kg/45°</b></p> <p>Price :</p> <p>Length: 8ft 3in Closed Length: 1815mm Weight: 376g</p> <p>Guide SIC-S Titanium Frame K Guide + SIC RV Guide(Fuji)</p>

**ROD DETAIL** Please refer to the list on page 62 to check details of rod specifications.

Reel Seat : Spinning Model **DPS20** (Fuji) Overhead reel Model **T-DPS22** (Fuji)  
※A=Whole length of grip B=Length from reel foot to end of grip when reel is equipped

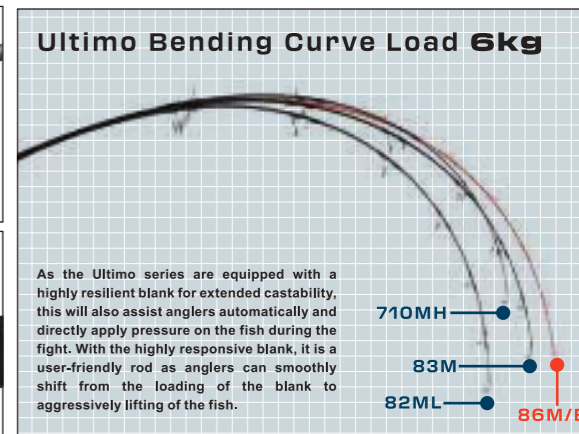

## ROD DETAIL PICK UP

For spinning models, we have utilized SIC-S titanium frame K+SIC-RV guides for optimal excretion of the line.

By inserting a resinous ring in the grip end rubber cap, it will drastically reduce the grip end being stuck in the gimble belt (fighting belt) during the fight, allowing for a smooth fight to landing of the fish.

# OceanVoyager GTXpedition

GTXpedition / GT & Kingfish Boat Casting  
Giant Trevally / Kingfish

Ripplefisher's 3 piece pack rod, "GTXpedition" model has been designed to consider the recent traveling limitations, the collapsed length has been set to 887mm for the two PE6 and PE8 class rods. These models are not only suitable for your GT fishing in exotic locations but also trips targeting massive kingfish. By combining these rods with the Aquila EX models, anglers will have a wider range to choose from depending on the sea conditions, lure size and target size.

By reviewing the bending of the new GTXpedition models, we were able to perfect it as a 3 piece rod. With its lightness, outstanding balance, sharpness and appropriate bending curve, you will not believe it to be a multi piece rod. We hope you can first handedly experience the ever improving technology at Ripplefisher.

## GTXpedition 81M

This is a PE6 class multi piece model to target GT and Kingfish domestically or internationally. It is ideal for use with diving pencils and small mouthed poppers. The seamless bending curve pleasantly surprise you as it will not feel like a 3 piece blank. Anglers will be able to cast into strong head winds with its added sharpness and the blank will assist anglers to maintain balance during the fight and efficiently lift the fish. We are proud to present you this rod with the potential to go head to head against 30~40kg class GT while being a PE6 class light and sharp rod.

Angler's Weight : 55kg~ (Recommendation)

## GTXpedition 81MH

This is a PE8 class multi piece model to target large size GT as its main target domestically or internationally. The sharp and highly resilient blank is ideal for use with large diving pencils and medium size mouthed poppers. You will be able to utilize and sharply maneuver these lures with little effort thanks to the characteristics of the blank. The sharpness of the blank will also reduce the load on the angler when casting all day long. In contrast to the 81M, this model is more muscular and has a sharper blank with instantaneous force enabling anglers to take initiative and have a speedy fight with the monstrous fish. You will be able to load the blank and stop the fish in shallow waters or around rough structures. This is the ultimate travel rod we were able to produce through challenging the limits of a multi piece rod.

Angler's Weight : 65kg~ (Recommendation)

The GT Expedition comes with a thick synthetic leather rod bag that provides excellent protection for your rods and allows for compact storage.

# OceanRidge

OceanRidge / GT Boat Casting  
Giant Trevally

The OceanRidge series are GT rods especially designed with Ripple Fishers' brand characteristics. The lineup built up for the needs of the expert anglers require manual maneuvering and will bring out the true skills in anglers. These are not your ordinary lineup and will not suit all anglers. But rest assure that these rods will feel like a part of your body once anglers have established their style and skill.

The GT game is becoming tougher and tougher each year and sometimes require the use of supersize lures to induce a bite. Ocean Ridge series including the strongest GT78 is not simply an over powered rod but will become your biggest asset in specific situations and against monstrous GTs.

## OceanRidge Reversal GT 80 Nano

This is a model where anglers will be able to experience and feel for the distinct difference in the Nano blank. It is lighter, stronger and more sensitive while having an astounding ability to cast long distances. Anglers will be able to utilize pencil type lures and small/medium mouthed poppers to land those massive GT. The blank has a smooth bend curve with increasing torque as more load is applied on the rod. It is an ideal rod for those who have never experienced our OceanRidge series or those lighter weighing anglers (approx.60kg) who have the skill to smoothly transfer their body weight on the rod during the fight.

Angler's Weight : 65kg~ (Recommendation)

## OceanRidge LC GT 82 Nano

For those who want to cast farther than any other angler on the boat. This is an ideal rod for use when long casting is required or casting against head winds. It is suited for use with poppers and diving pencil type lures. The Nano material has not only increased its controllability but anglers will also be able to sense the slightest changes in current movement through the blank, line and lure while efficiently and effectively surface the GT. Although it is a long casting model, you will be pleasantly surprised with its lightness and controllability.

Angler's Weight : 70kg~ (Recommendation)

## OceanRidge PF GT 711 Nano

Although this stiff and super sensitive rod may be limited for use by experts, its true potential will be exhibited once anglers with vast knowledge and skills take hold of it. The NANOALLOY® technology developed by Toray has sharpened the blanks capabilities allowing anglers to decipher the subtle changes in current and control the lure at the anglers will. The PowerFight 711 has remarkable lifting power and will surface GT exceeding 50kg simply by loading up the rod and using its repulsive force.

Angler's Weight : 70kg~ (Recommendation)

## OceanRidge FINAL SPIRIT GT 78

his is the most powerful and toughest GT rod Ripple Fisher has ever developed with stiff characteristics in the tip to belly section for easy use with large mouthed poppers and outstanding lifting power in the butt. The blank is highly responsive and once hardcore anglers put his/her full weight behind it, the repulsive force in the blank will efficiently lift the fish. It is an ideal rod for short popping of large mouthed poppers and controlling massive 300mm class pencil type lures when the GTs are feeding on super large baits. It is not a rod that you want to be using all day long, but a rod that you want to bring out in hairy situations with gushing currents and rugged terrain.

Angler's Weight : 80kg~ (Recommendation)

OceanRidge PF GT 711 Nano

OceanRidge PF GT 711 Nano

### OceanRidge Bending Curve Load 7kg

Ocean Ridge is a GT exclusive model and is mainly intended for use with lures such as poppers and large pencils. The FS78 is designed with a focus on balance while keeping its high power, and when fighting large GTs at medium to short distances, you can develop a fight with good response thanks to the closer bending fulcrum.

## MORE ABOUT SHORE CASTING MODELS

### <Explanation of Ripple Fisher's Shore Casting Rods>

Ripple Fisher's shore casting category is a lineup that can handle a wide range of species, ranging from light games such as horse mackerel and rockfish to extreme fishing for GT off the rocks. The series are developed according to the nature of your target species to overcome the various situations anglers may face. We hope this will be of reference for you to choose your rod with the following explanations and diagrams.

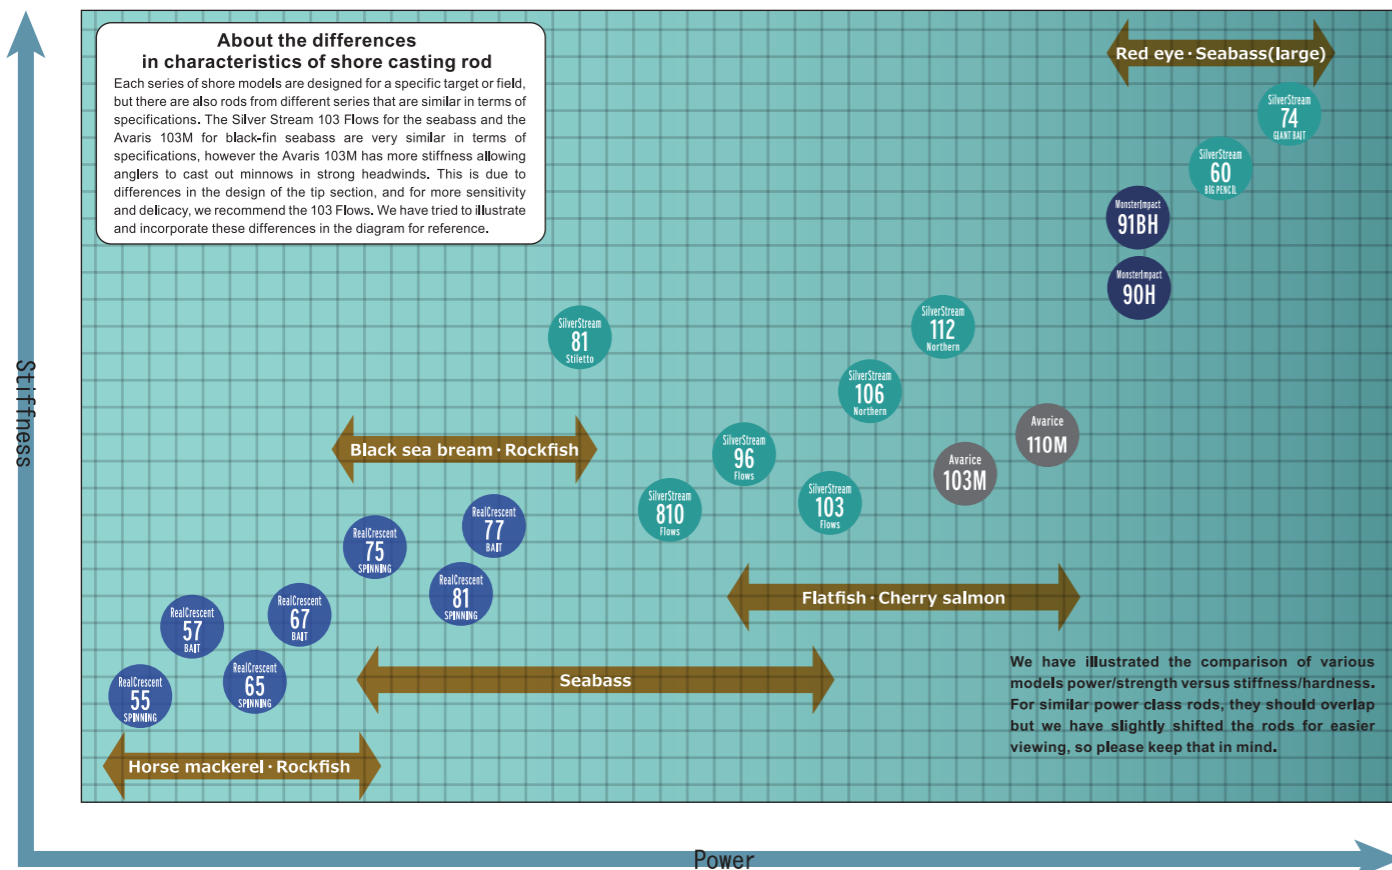

### Shore casting model field type explanation

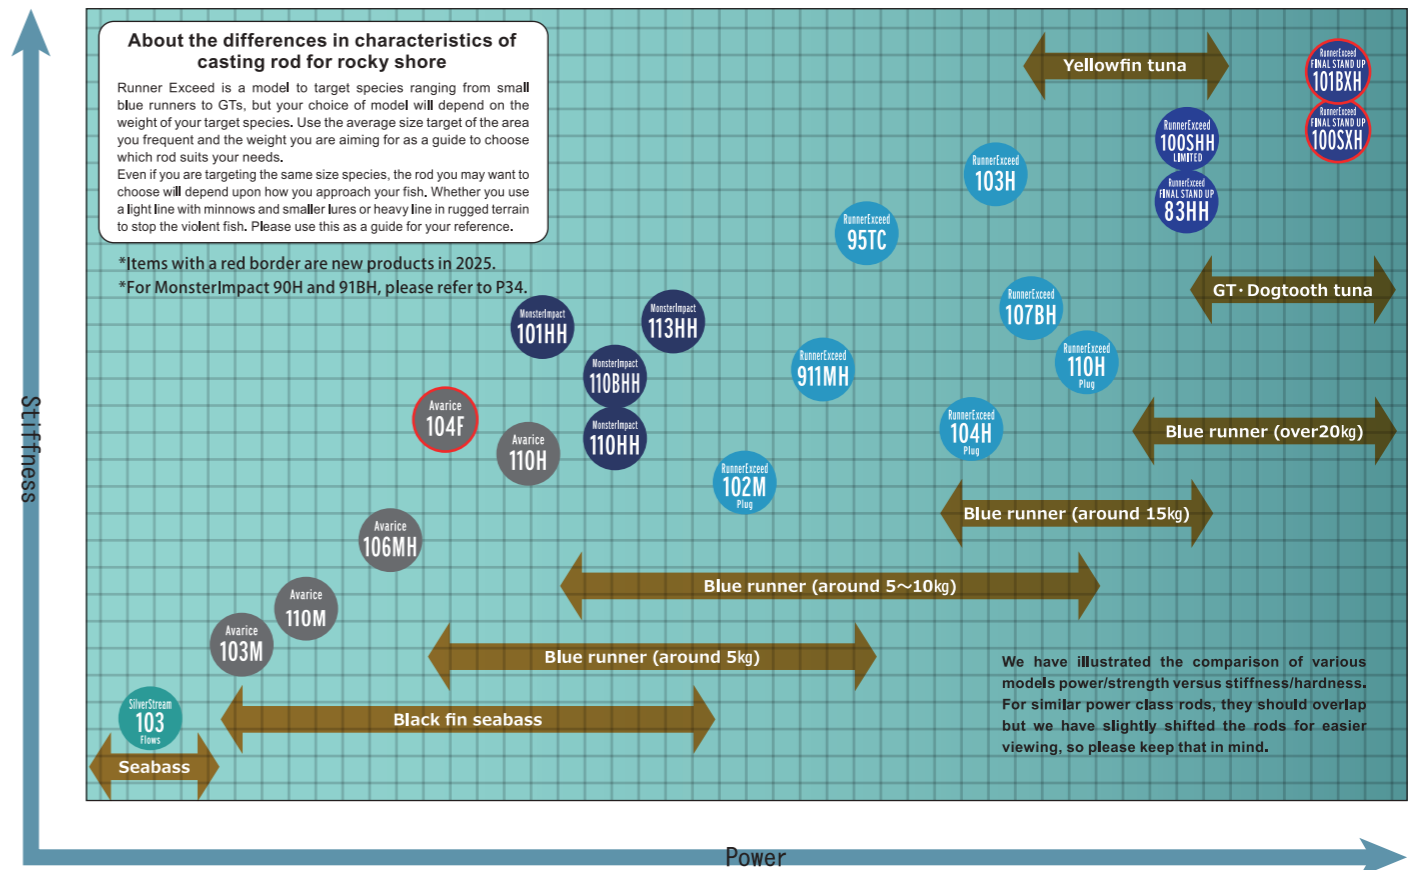

RealCrescent	Breakwater		Breakwater·Rocky Shore	
Suitability of Field	RC-55/RC-65/RC-57B/RC-67B		RC-75/RC-81/RC-77B	
	The RC-55, RC-65, RC-57B, and RC-67B are highly sensitive models that can be used with jig heads of around 1g, but they also have the power and tenacity to easily bring in large horse mackerel and large rockfish. They are also suitable for a wide range of light games, such as those using very small lures for trevally and small seabass.		The RC-75, RC-81, and RC-77B are versatile rods able to handle a wide range of lures. Anglers can utilize anything from 2g jigs, micro lures, top water lures and minnows up to 9cm. They are great for targeting bream, seabass, small rock fish and other species in the shallow reef.	
SilverStream	High Sensitivity	All-Purpose	Distance Casting	Big Bait Lures
Characteristics of Each Model	81 Stiletto	Flows 810/96/103	Northern 106/112	60BP/74GB
	The 81 Stiletto is a model made entirely of 40t carbon, and is a rod with ultra high sensitivity and high action performance. Anglers will easily be able to control 7g sinking pencils at any given field, whether it be the river, break water, pier or off the rocks.	The Flows series 810, 96 and 103 are equipped with highly sensitive tips and are designed for anglers to capture the current of river. The butt section has MH power allowing anglers to target meter class seabass.	The Northern series 106 and 112 are models that have been tuned to maximize the long casting distance of jigs and jig minnows. They are also great for surf fishing, taking advantage of their long casting ability.	The 60 Big Pencil provides excellent maneuverability for large top water plugs, while the 74 Giant Bait excels at maneuvering jointed plugs over 300mm, and is effective not only for seabass but also for large akame (Japanese barramundi) that feed on large baits.

Avarice	Rocky Shore(Flat)	Specialized Model	Rocky Shore(Rough)	
	Suitability of Field & Characteristics of Each Model	103M/110M	104F	106MH/110H
By increasing the followability/flexibility of the blank of the 103M and 110M, we have minimized the stretching of hooks when using smaller lures. Anglers are able to utilize these smaller lures for high pressure fields with little water movement.		This is a super fast taper blank equipped with outstanding castability for high accuracy. The highly sensitive blank allows anglers to keep the target away from reef edges and rocky heads at your will thanks to the fast tapered characteristics. It is a specialized model for black fin seabass with its ability to cut through strong head winds with the short and sharp blank.	The 106MH and 110H have a high lifting power that can surface tunker size black-fin seabass in gale force winds and heavy seas. The sharp blank is ideal for use in strong winds over 10m/s and high seas.	
MonsterImpact	Large Plug	All-Purpose	Emphasis on Operability	Multi-Piece
	90H/91BH	110HH/110BHH	101HH	113HH
Characteristics of Each Model	This model is designed for anglers targeting species feeding on large baitfish. It is easily capable of casting out lures around 200mm to target meter over seabass and 20kg class barramundi.	This model can handle anything from 15g minnows to 60g diving pencils to cater for a variety of fishing patterns. Anglers will be able to target black-fin seabass and blue-runners from the break-water, rocky headlands and rocky surf beaches.	The 101HH is the most powerful and has the sharpest casting feel in the series, and the shorter length allows for high maneuverability. Anglers can utilize the rod for light shore jigging with 50g jigs and heavy sinking pencil lures.	The 113HH is a highly portable 4 piece model with storage dimensions of just 90cm. It allows anglers to safely venture into their secret fishing spots with long walks or high elevation. They are equipped with double footed guides for extra strength.
	RunnerExceed	Main Model		Extreme Model
For Plugs and Jigs		For Diving Pencils	Emphasis on Stability	Emphasis on Lifting Power
Characteristics of Each Model	911MH/95TC/103H	102M/104H 110H/107BH	100SHH/83HH	100SXH/101BXH
	The three all-purpose models can be used for a variety of techniques with a diving pencils, popper, or jig. They have a strong overall stiffness and manual controllability of their lures to easily maneuver their lures for the bite. These models are especially compatible with jigs, and are recommended for anglers who use jigs frequently.	As the name suggests, the four models specialized for diving pencils are tuned to use all kinds of diving pencils in a variety of fields. Even in situations where it is difficult to adjust the pitch of the action due to high waves, the highly responsive belly section assists for the lure to grip the water to reduce action errors.	The targets are kingfish over 20kg, GT and dogtooth tuna, which can be targeted in your exotic locations around the world. <ul style="list-style-type: none"> <li>The 100SHH has a light and easy feeling when in use unlike an HH class rod. It is not only capable of handling large lures but also smaller 60g lures when your supesize kingfish are feeding on smaller baits.</li> <li>The 83HH is a model that can handle large plugs and large-mouthed poppers over 150g with ease throughout the day. The short length blank makes it easy for anglers to bend and load the rod. Ideal for mammoth amberjacks and GT off the rocks.</li> </ul>	As the name suggests, these two models are specialized for their lifting power and are by far the strongest of any of our land-based casting rod. <ul style="list-style-type: none"> <li>The 100SXH is stiff throughout the whole blank and will allow anglers to easily cast out large lures.</li> <li>The 101BXH also has ample stiffness throughout the rod but is a little easier to ally pressure on the butt section to utilize the powerful winding with the bait-caster reel. It is also compatible with the long leader and sea-hunter line systems.</li> </ul>

## STRENGTH TO ACHIEVE

for challengers aiming beyond

The RunnerExceed series are land-based casting rods packed with characteristics required to go head to head with monstrous bluerunners off the rocks. Targets including your local yellowtails, kingfish, amberjacks to those GT, and dogtooth tuna inhabiting the warmer waters. Our lineup of rods are designed with the capabilities to "catch" your dream fish in the harshest environments.

Each and every angler will have their own style but there is one thing in common and that is the "strength" the RunnerExceed series have.

We would like anglers who challenge themselves to the limits to first handedly experience the lightness, controllability, resilience and strength of the series when most needed during the fight.

"Main models" target Blue runners such as Kingfish and amberjack yellowtail, and we even have models with a view to over 20 kg in Kingfish.

In addition, we also have renewed "Extreme models" for more rugged areas to target non standard Big fish such as GT and Dogtooth tuna, opening the door for more rock shore games.

We dedicate this model to those anglers who are challenging themselves to the limit, as the lightness, controllability, resilience and overwhelming power in the rod have been designed to do exactly that.

# RunnerExceed EXTREME MODEL

The Runner Exceed Extreme Models are series dedicated to anglers who continue to push themselves to the limit. Land based big game is a tough and at times very dangerous style of fishing but the joy of landing your trophy fish is so special. In recent years, anglers have established their local areas and thanks to the easy access to information these days, this style of fishing has become a lot more familiar to various anglers around the world. However, in the face of overwhelmingly powerful nature and unknown monstrous species, there are many moments when human knowledge and efforts are beyond reach. No matter how experienced and well-prepared you may be, anglers will be defeated and go through many setbacks. These difficulties, toughness and challenges are the reason we keep going. It is worth pursuing.

The excitement that comes at the end of that challenge.

Each catch comes with a special moment and is the reason why anglers make it a lifelong goal.

It's all about the moment. We, Ripple Fisher, will continue to challenge the limits of product development together as long as there are anglers who continue to challenge their limits.

In 2025, the two core models of FINAL STAND UP will be reborn. The 100SXH and 101BXH, which have been perfected through numerous field tests, have the most power in the Runner Exceed series while refining their light usability. The 83HH takes advantage of the short length to enhance the power fight and the usability of the large plug, making it effective in specific situations. The 100SHH LIMITED is a highly versatile model among the EXTREME MODELS, with the blank designed with a special carbon configuration. The rod is highly resilient and has an exceptionally light user feel. These four models in the lineup are Ripple Fisher's EXTREME MODELS, which were created for anglers who like to challenge their limits. They will show their true potential at the most extreme conditions against unimaginable monsters in the field.

**2025 NEW**

## RunnerExceed FINAL STAND UP 100SXH

Boasting the strongest power in the series, the 100SXH is a high powered rod that is designed for anglers to go head to head with the large species. It takes a certain amount of physical strength and skill to be able to swing it around, but if you can, it is a lethal weapon. The highly resilient blank will allow anglers to cast out large lures with ease, while lightly controlling the lures and guiding the large species. Once you get the hang of this rod and it becomes part of you, there is no looking back. It is a rod that makes anglers grow.

## RunnerExceed 100SHH LIMITED

Our goal was to create a rod that possess the power of an XH class rod while having the lightness of a H class blue runner rod. The whole rod is stiff including the tip section, able to sharply cast out lures with the strong repulsive force from the blank. Anglers can not only comfortably cast and control large lures weighing 150g, but can also cast out smaller lures weighing 40g by loading the rod with the weight of the lure. With the strong repulsive force, the rod is also ideal for use with jigs. Anglers will easily be able to aggressively fight fish around 10kg with the outstanding lift power and tenacity. This is a highly resilient carbon rod not only ideal for anglers targeting monstrous size blue-runners but also great as a entry level land based GT rod.

**2025 NEW**

## RunnerExceed FINAL STAND UP 101BXH

Not only does it offer the advantage of the use of various line systems, but it also has a sharp cast feel and torqueful butt power. With its excellent balance, the overwhelmingly powerful rod feels light allowing anglers to comfortably swing it around all day long. We've packed all the elements needed for the land-based big game fishing with all the benefits of the bait-casting tackle. This is RippleFisher's current answer for land-based big game fishing with bait-tackle set up.

## RunnerExceed FINAL STAND UP 83HH

The 8.3ft short length blank with tenacious strength in the belly to butt section will effectively apply pressure on the fish once loaded. By shortening the overall length of the rod, it has allowed anglers to consistently apply pressure on the fish during the fight while being able to fully cast out large size lures with the least amount of effort. Furthermore, the short length will reduce the strain on the angler when utilizing large mouthed poppers, conserving the energy of the angler until the fight begins. We are confident that the 83HH will bring about great advantages to the anglers when unexpected monstrous fish attack your lure with its light controllability and highly responsive blank which will continuously and effectively apply pressure upon the fish.

### ROD DETAIL

Please refer to the list on [page 62](#) to check details of rod specifications.

Reel Seat : Spinning Model **DPS22**  
Bait Model **T-DPS22** (Fuji)

A=Whole length of grip  
B=Length from reel foot to end of grip when reel is equipped

The spinning model of the FINAL STAND UP uses a rubber material for the fore grip and shaped with grooves to improve the grip. This allows anglers to take a solid grip of the rod reducing any slippage during high-load fights.

The grip of the bait model "FINAL STAND UP 101BXH" is not only easy to grip during fighting, but also easy when guiding your line into your bait-caster reel while maneuvering the lure. In addition, a rubber grip is used to prevent slippage during the fight.

# RunnerExceed MAIN MODEL

The Runner Exceed series are a wide range of rods to target the yellowtails in your local waters to the bigger and harder kingfish off the rocks. The 3 plugging models are ideal for use with diving pencils with the flexible yet powerful blank to apply ample pressure on the fish.

The 911MH and 103H are versatile models for use with both jigs and plugs and the 95TC is ideal in tough conditions where delicate maneuvering of the lure is required. We also have a 107BH for those over-head reel enthusiasts. Although your targets may be similar, the 7 choices of rods will open up new doors for different locations, field conditions, and styles of approach toward your rocky shore game fishing.

## RunnerExceed 102M Nano / PlugModel

This is the lighter plugging model of the Runner Exceed lineup. With its soft tip section, anglers will be able to utilize lures ranging from 20g minnows, medium size diving pencils, and even jigs weighing up to 90g when the bite range is far and deep. It is ideal for anglers targeting Kingfish and Amberjacks to 5kg and Yellow-tail weighing up to 10kg.

## RunnerExceed 104H Nano / PlugModel

104H is While being able to easily control diving pencils through its soft tip, once the rod is loaded with the fish, it will exhibit its true power and potential. Compared to the current 103H, more flexibility is given to the belly section, allowing anglers to lift the rod higher to withstand the final thrust of the fish in close range.

## RunnerExceed 110H Nano / PlugModel

The 110H is a next generation plugging model for land-based anglers with a light feel but possessing the power of a HH class rod. With the outstanding rod balance, this rod draws a sharp contrast from those ordinary long length high powered models on the market. The flexible tip section brings about various positive attributes. Although it is classed as a 'H' class rod, the potential of the blank is comparable to the power of those 'HH' class rods, able to go head to head with Kingfish ranging from 10~15kg in shallow waters.

## RunnerExceed 911MH Nano

This versatile rod will allow anglers to utilize both jigs and plugs for any given situation and possesses the power to lift 3~4kg fish out of the water with the rod. With its ability to cast a mile with jigs up to 100g, the ideal length to maneuver the jig with the rod under your armpits and absolute balance and flex so the fish doesn't violently thrash about, this rod will surely be your next right arm.

## RunnerExceed 95TC

The 95TC is a technical model with a highly responsive blank design to maneuver the lure on a next level. The developmental concept of this model was to enable anglers to utilize various lures including sinking minnow, poppers, diving-pencils and jigs to induce bites in difficult conditions when the sea is flat and the lure is highly visible. The light weight 9.5ft length rod has a MH class strength for fighting 5~10kg blue runners off the rocks. With its outstanding casting distance and highly well balanced characteristics, anglers can utilize this as your main rod or back-up rod for your more exotic expeditions.

## RunnerExceed 103H

This is a power up model of the 911MH for use with both jigs and plugs targeting blue-runners around the 10kg mark. Although the cast feeling is sharp, the 103 length of the rod will load up nicely to apply pressure to the fish. For those anglers who prefer the use of plugs, the sharp casting feel will be ideal for you. Anglers will be able to utilize both poppers and pencil type lures with a more manual action.

## RunnerExceed 107BH Nano / Overhead reel Model

The blank itself is extremely flexible and tenacious yet possesses a sharp tip to belly section for accurate casting. The butt section is highly repulsive once loaded. Anglers are able to utilize various size lures while capitalizing on the advantages of the long leader system with the use of either nylon or fluorocarbon leaders. Anglers won't be stretched even on the bad footing and will help you target that dream monster class fish off the rocks. Although it is flexible enough to cast light plugs, anglers will be able to stop the violent run from 10kg + kingfish and lift the fish. Once the rod is loaded, the bending curve will slowly transfer towards the angler, allowing the rod to smoothly bend even with the smaller 3kg~6kg fish, yet possessing underling power for those monstrous fish.

# Avarice

## Avarice / Black-fin-Seabass Game Black-fin-Seabass

The Black fin seabass game is conducted under harsh environmental conditions with strong head winds, heavy swells, complicated currents and uneven footing. Anglers will cut through the strong headwinds and sew through the complicated currents. The highly sensitive blank will allow anglers to notice the subtle changes in current and flow to inform you of bite spots.

With the addition of the new concept model 104F, we will take the Black fin sea bass game to the next stage. It will provide a different usability and strategy than ever before, making the Black fin sea bass game even more exciting.

### 2025 NEW Avarice 104F

This is a special concept model for anglers to target selective lunker size blackfin seabass with the use of smaller lures with pinpoint accurate casting. The slightly shorter length of 10ft4in allows for easy maneuverability and handling, as well as low trajectory pinpoint casting in strong head winds. The super fast tapered blank is equipped with a sensitive delicate tip to be able to successfully hookup the minute bites from the black fin seabass while the fast tapered characteristics of the rod allowing anglers to safely fight and land fish with its outstanding reach. This is a new concept rod from Ripple Fisher to tackle the ever challenging black fin seabass game.

### Avarice 103M Nano

This 103 length is light, easy to handle and is efficient when fishing from low rock formations or bolder rocks for the black-fin seabass or the normal seabass off the rocks and fishing from the surf for flounders. Although it is short in length, the blank will bend nicely to withhold the fish.

### Avarice 110M Nano

It possesses highly sensitive characteristics required to transmit the short bite of the blankfin seabass, while the flexible blank bends-in to reduce hook offs due to straightening of fragile hooks. The blank which possess the contradicting characteristics of flexibility and sharpness, allows anglers to sharply cast lures ranging from 10cm to those larger 40g lures. This new standard rod is not only suitable for monster class black fin seabass, but also 5kg class blue runners and snappers off the rocks.

### Avarice 106MH Nano

It possesses a stronger butt section compared to the 103M and with its refined taper design, it maintains the easy handling of the rod while improving its castability. You will be able to first handedly experience how the carbon material has evolved from this 10ft 6inch blank packed with castability, loading power and controllability of the fish.

### Avarice 110H Nano

This is an almighty rod with its ideal length and power settings for use anywhere, anytime. It is capable of cutting through strong headwinds, while having the ability to cast small lures to pinpoint accuracy and not to mention its overwhelming butt power. The Nano blank characteristics can be noticed in the contradicting nature of its sharpness when casting and its ability to bend nicely once it is loaded.

# MonsterImpact

MonsterImpact / Shore Casting for Monster  
Black fin Seabass / BlueRunner / Red Eye / Seabass

The Monster Impact series are special models to target various species varying from Blackfin seabass, Akame (Japanese Barramundi), seabass and medium size Blue runners.

With conditions continuously changing when fishing of the rocks, it is absolutely imperative to be able to adapt to the surrounding conditions. The rod was designed from the ground up with the ability to not only go head-to-head with the large species but also have the controllability to technically maneuver and control your lure.

In addition to the highly versatile characteristics of the spinning 110HH and bait-casting model of the 110BHH, their outstanding castability will allow anglers to accurately hit their target when casting, giving anglers great advantages in the most difficult of conditions.

The flexible belly section will enable anglers to easily control top water lures and the powerful butt section will help prevent bust-offs nearing the end of the fight off the rocks, allowing for a smooth landing of the fish.

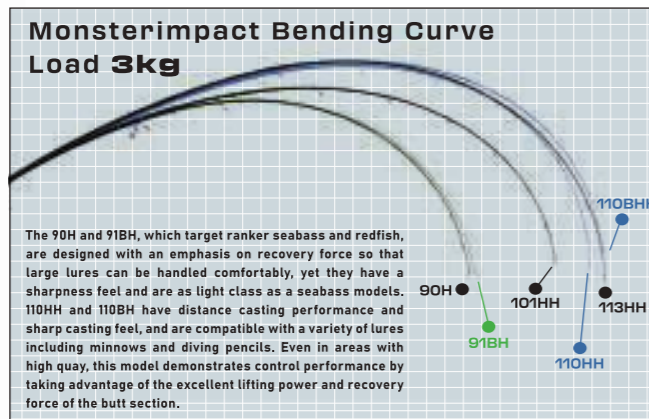

We also have the 101HH to target Blackfin seabass and Blue-runners, the 113HH/4pcs which is highly portable, and the 90H/91BH for monstrous seabass and Akame (Japanese Barramundi). We hope you can experience first handedly RippleFishers new era in the power-rod scene.

## MonsterImpact 90H Spinning Model

This is a specially tuned seabass model to easily cast through with big-baits (70g) and even small minnows from 20g. The butt section has been enhanced to easily stop lunker size seabass and Red Eye (Japanese barramundi) that are feeding on large bait fish (Sardines, gizzard shad, and mullets). We aimed to produce a rod where anglers will be able to enjoy casting large plugs a great distance. We present this ultimate spinning rod for the ultimate spinning anglers.

## MonsterImpact 91BH Overhead reel Model

The blank of the 91BH has been shaped for accurate casting and controlling of big bait plugs up to 130g. Although it is a power class model, the sensitive blank will transmit the minor existence of 20g class minnows and will allow easy control. It basically has the same concept as the 90H spinning model but has a greater range of lure usage and allows anglers to utilize thicker and longer leader systems advantageous in overhead reel tackle settings. The direct controllability of the lures and consistent casting accuracy will surely help you further enjoy your big bait game.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

## MonsterImpact

### MonsterImpact 101HH Nano Spinning Model

101HH is designed to target both the black-fin and blue runners but this 101HH is set more towards the blue runners. In other words, it is for anglers who are targeting blue-runners and might want to also cast out a few small lures for the black-fin. The short length 10ft 1inch and its short grip has been set for use around flat rock formations, to increase the casting accuracy and balance. Although it is a rod for the black-fin, it can also be used for situations where the bait fish are extremely small when targeting the blue-runners with smaller lures.

### MonsterImpact 110HH Spinning Model

The Monster Impact 110HH is built up with material and engineering technology with a flexible yet sharp blank feel. This has helped enhance the casting and control of lures while the sensitivity will transmit the vital information under the water. With its length and castability, it is an ideal rod for use when fishing off elevated large rocks and a stretch of shallow rocky grounds. It can not only cast small 9cm class minnows but also larger diving pencils for your Blue-runners. The flexible belly section will follow through once loaded and smoothly transfer to the highly resilient butt section to easily surface monstrous Blackfin seabass and medium size Blue-runners. We are confident that anglers will be able to enjoy the high performance and total balance of RippleFishers state of the art technology through the Monster Impact 110HH.

### MonsterImpact 110BHH Overhead reel Model

In highly strong headwinds and side winds, this highly responsive and powerful bait casting model will help anglers seek a different approach compared to the spinning model. Its absolute casting technology will allow anglers to cast pinpoint accuracy in the tightest spots and anglers will not miss the split second timing between large sets in the heavy seas. Its fighting response and butt power will enable for a powerful fight against medium size blue runners nearing the rocks. This model will be advantageous in the roughest of conditions and will allow anglers the ability to venture out to locations never set foot in before.

### MonsterImpact 113HH / 4pcs Spinning Model

The 113HH is a powerful pack rod which allows easier access to your fishing grounds to target Blackfin seabass and Blue-runners. The short 90cm separate length can be stowed in your backpack and freeing both hands of any rods will help anglers safely reach some of the more remote and dangerous land based fishing grounds. It is a versatile rod able to handle small minnows to medium size diving pencils with a seamless bending curve rarely seen in any 4 piece rod. The rod possesses contradicting qualities of both powers in the butt section to stop the run of monstrous fish and flexibility in the belly section to avoid any hook offs. While being highly resilient this regular tapered blank will show its true potential in the most critical time. The MonsterImpact 113HH/4pcs rod comes with its own special rod bag and a useful neoprene rod bag for your fishing trips. The rod also fits nicely onto the RippleFisher waterproof backpack.

VARIOUS TARGET & STYLE

# SilverStream

## SilverStream / Shore & Boat Casting

Seabass / Flatfish / Cherry Salmon / Others

Silver Stream is a series that continues to change and evolve, with the concept of enjoying familiar targets such as sea bass, flounder, and sea trout in a well-honed style. The essence of Silver Stream is to cover models specific to each situation, and further subdivide and sharpened the performance of each model.

Although the entire series is structured as one large category, each model has a distinctly unique concept and provides performance specific to each target and situation.

**"BIG BAIT"**

A series for targeting seabass that eats large bait fish such as Mullet and Gizzard Shad with a super large plug.

**"Stiletto"**

A model that pursues ultra high sensitivity performance and takes on the challenge of maximizing the reaction speed of anglers.

**"Flows"**

A model that has performance of distance casting and sensitivity to feel the current when tracing, and aim sea bass and flounder with a variety of lures.

**"Northern"**

A model developed to make maximum use of jigs and jig minnows to target sea trout in the northern Japan area.

In this way, Silver Stream is different from ordinary rods. However, it is this cutting edge concept that creates unique performance. And that performance is exactly what we were pursuing for in Silverstream.

SilverStream 60 BIG PENCIL (Long Handle)

# SilverStream BIG BAIT Series

SilverStream BIG BAIT series are We have added the qualities required for this diverse and exciting big bait seabass game.60 BIG PENCIL for manipulating big pencils freely, 74 GIANT BAIT for using giant baits over 30 cm.In addition, the 60 has an optional long handle for a long cast.Please open up new door of sea bass games in various fields with two models packed with performance that allows you to immerse yourself in the world of deep big lure sea bass games.

## SilverStream 60 BIG PENCIL

This rod is designed to target seabass off-shore with the use of big-bait lures. Anglers will be able to cast and maneuver large pencils easily to induce bites from seabass feeding on massive bait fish during specific seasons of the year. We are also planning to release a long-handle (sold separately). By attaching the long-handle, anglers will be able to easily cast and use the rod from the bow of the boat, in addition for use with land-based fishing. (The length of the rod with the long-handle will be 6.9ft)

## Long Handle (60 Optional Parts : 60→69)

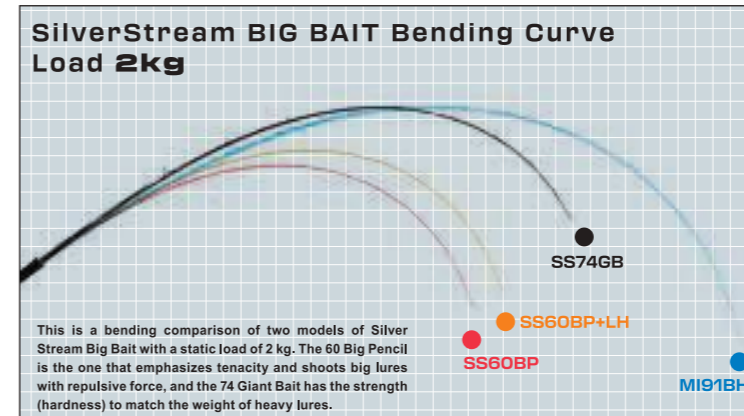

Longer handle for Silver Stream 60 Big pencil is available as an option.

\*It is sold as just handle itself.

The whole length will be 6ft 9inch when the long handle is equipped. The length from the trigger to the end of the grip will be extended 115mm, and to the top of the front grip will be extended 95mm. If you are required distance cast or wish to have more stability when you manipulate lure or fight with big fish, this long handle will support you, don't matter from shore or offshore.

## SilverStream 74 GIANT BAIT

The 74 is a special model able to cast out super giant baits exceeding 300mm and 250g. The 74 is approximately two levels more powerful compared to the 60. While being able to overhead cast super size joint baits, anglers are also able to lightly control smaller 3oz lures. It is ideal to maneuver joint baits with the sharp rod action and will outperform most rods off-shore and land based.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

# SilverStream Stiletto/Flows/Northern

The SilverStream series are built up of a lineup of rods to target various species including Seabass, Flounders, Bream and Salmon from a land based style.

## SilverStream 81 Stiletto

The SilverStream 81 Stiletto is a super delicate and ultra sensitive specialized model built up with all 40t carbon materials. This ultra sensitive blank will transmit the slight changes in the flow of water and the drag against the lure, allowing for a swift hookup once the angler feels any subtle bites. Not only allows anglers to cast out lures up to 28g but also enables the use of lighter (8g) sinking pencils while maintaining the sensitivity and controllability. Our objective was to create a rod, which drastically reduces the time lag between the "bite" to the "hookup". In other words, the Stiletto is a super "high speed" rod that allows anglers to respond quicker through the ultra sensitive characteristics.

## SilverStream 810 Flows Nano

The 810 Flows is the core model of the series with its ideal length for seabass fishing equipped with strong butt power. It is especially outstanding with its casting swing through and high sensitivity. Anglers will be able to decipher the subtle difference in current movements while maintaining the high response required for an efficient and effective hookup. With its high tolerance, the butt will still hold extra power even when fighting a monstrous seabass.

## SilverStream 96 Flows Nano

The 96 Flows is designed for use in large river systems, estuaries, surf casting and wading in the flats which require long distance casting of large lures. The 810 is a type of rod to conquer the current, whereas the 96 is designed more to feel the changes in current far away. The lightish tip section will allow anglers to not only utilize large lures but also various smaller minnows and vibration type lures. The concept for the Flows 96 is "distance" and "sensitivity".

## SilverStream 103 Flows Nano

The Flows 103 is a model designed for use off the rocks and surf casting which require the power and sharpness to cut through strong headwinds. It allows anglers to easily cast and trace smaller lures which weren't possible with the stronger black fin models, while also having the power required to swing through with heavier lures.

## SilverStream 106 Northern Nano

This model is ideal to cast metal jigs and jig minnows up to 50g in weight from rocky headlands and technical rock formations, which require a quick and tricky cast and retrieve. With its sharp characteristics, anglers will be able to cast accurately while controlling the jig at ease. Having said that, the rod will bend nicely once the rod is loaded and will prevent any loss of fish from the targets lip ripping. Furthermore, it possesses the butt power to aggressively stop the violent fish from diving into the rocks and structures.

## SilverStream 112 Northern

The 112 Northern is a sharp rod designed for long distance casting and will enable anglers to cast out metal jigs and jig minnows up to 60g from the surf and other major points by utilizing the whole rods repulsive force in strong head and side winds. With its high sensitivity, this rod will become your ultimate weapon when the fish are far and you need to search a vast area. Furthermore, the long rod length will help you avoid any rocks or structures nearby and it also possesses the butt power to rip off the monstrous flounders from the seabed.

## SilverStream Bending Curve Load 1kg

# RealCrescent

## RealCrescent / Light Game

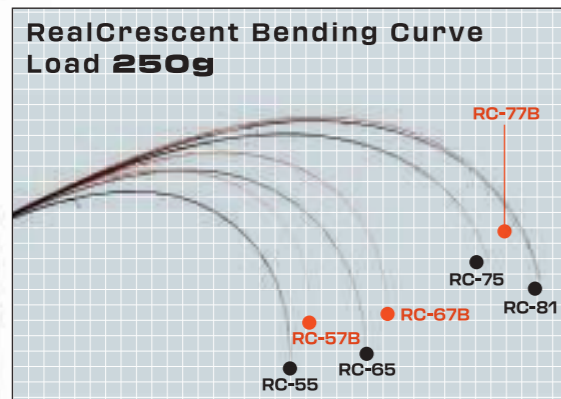

Horse-mackerel / Rock Fish / Seabream and more

The "Real Crescent" series has been finely honed to further enjoy deep and technical light game fishing.

They are equipped with the controllability and sensitivity to appreciate the technical jig-head games and also possess the power for anglers to enjoy targeting rockfish and bream. With the easy and light usability, anglers will be able to appreciate the sharp and powerful blank it possesses.

The high sensitivity, lightness, beautiful bend curve, and power will respond to each angler's needs for the light game. The new Real Crescent series is the next generation of basic light game rods.

We have carefully selected 4 models for the spinning and 3 models for the overhead reel tackle. All models are highly versatile with the potential to target various species in various fields for the light game. We hope you can experience our Real Crescent models to strive for the next stage in light game fishing. (All models equipped with Torzite K guides and NANOALLOY® Technology blank)

The most basic light game model is the RC-65. The RC-55 is designed for use with a singular body jig-head and the RC-75 is for use with Carolina rigs and metal jigs. The RC-81 seems to be the strongest rod but able to utilize a variety of lures with the flexibility of the whole rod. The RC-77 is the stiffest model of the series, suited for bottom knocking and dragging techniques to target rockfish and bream games.

## Spinning Model

### RealCrescent RC-55

This is an ideal model for use with a simple jig-head rig. Overall, it has a sharp feeling to it, but with the use of the NANOALLOY® material, the highly repulsive nature of the blank will bend nicely during the cast. The highly sensitive characteristics of the blank will not only transmit the information on the bite but also the subtle water pressure differences through the blank. Anglers will be able to utilize PE, nylon, fluorocarbon, and ester lines.

### RealCrescent RC-65

This is the standard model that stands as the core for the spinning model. Anglers will be able to experience seamless usage through the fast tapered rod with a flexible tip, resilient belly, and strong butt section. It is a versatile rod for use in various fields with the use of simple jig-head rigs, plugs, Carolina rigs, Texas rigs, plugs, and metal jigs with a high response. The strong butt section of the rod can deal with unexpectedly large rockfish and bream measuring over 50cm.

### RealCrescent RC-75

It possesses the sharpest feel of the blank in the Real Crescent series for use in not only Aji and Mebaru (Rock fish) targets, but also for various species of rockfish, bream, and for the light seabass game. The sharp tip section will transmit vital information on the current while enabling anglers to use Carolina rigs, Texas rigs, plugs, and metal jigs with a high response. The strong butt section of the rod can deal with unexpectedly large rockfish and bream measuring over 50cm.

### RealCrescent RC-81

This is a long length model designed mainly for use with Carolina rigs and floating rigs, but is also great with 3-5g jig heads. Compared to the RC-75, the stiffness of the tip section has been reduced for a lighter feel when in use. With its highly sensitive nature, it is an ideal rod for anglers to search the deeper area at great distances.

## Overhead reel model

### RealCrescent RC-57

Despite the stiff characteristics of the blank to exhibit the nature of an overhead reel model, it is a finesse model with an outstanding cast-feel. We have designed the rod so anglers can easily load the rod to cast with jig head rigs weighing less than 1g. It is also ideal for fishing styles that require sensitivity during the retrieval, such as dead slow retrieval of super light lures.

### RealCrescent RC-67

This is the most basic model for the light game overhead reel tackle fishing. With the fast tapered flexible tip section and stiff belly to butt section, anglers will not only be able to cast and control light jig-head rigs but also utilize various rigs, plugs, and metal jigs stress free. This next generation light game rod will enable anglers to capitalize on the biggest asset of the overhead reel by releasing the clutch while using the lift and fall techniques and drifting techniques.

### RealCrescent RC-77

This is the middle class overhead reel model to target various species of rockfish, bream, and seabass. It is an ideal light game rod to cover various species and fishing styles using "bottom dragging", "Lift and Fall" techniques with plugs to induce those reaction bites. The whole rod has been designed to be stiff to the tip, enabling anglers to cast lures up to 15g and rip those monstrous fish off the bottom with its outstanding butt power.

ROD DETAIL Please refer to the list on page 62 to check details of rod specifications.

RippleFisher Engineered  
**GEARS & GOODS**

**2025 NEW RF Measure Release Mat**

We developed the measuring mat for anglers targeting record breaking species off the rocks to safely and gently measure your catch for a smooth release. Once the fish is laid down on the mat, you can lift it by grabbing the handles on both sides. One half of the mat has a pocket shaped slot, so your fish will not slip off even on a slight angle. The inside of the pocket has a drainage hole, so it is easy to dry and keep clean after your fishing trips. We paid extra attention for designing the handle section so anglers will be able to lift the fish weighing around 70kg.

**Price:**

- Size : 900×1740(mm)
  - Weight : about 1600g
  - accessories : stainless carabiner (ASANO)
  - Material : Tarpaulin polyester
- \*Please use the measure only as a guide.

more detail

Placing the fish in the pocket prevents it from falling during transport, allowing for fish-friendly and safe release.

The handle is firmly reinforced, so you can use it safely even with large fish.

By folding the RF Measure Release Mat into a small size, it is compact for storage at home or in your tackle box. When traveling, attach the carabiner that comes with the RF Measure Release Mat to the D-ring at the top of the separately sold RF waterproof backpack, and secure it with the belt in the center of the bag for smooth transportation.

The Massimo offers a lineup of sizes that can accommodate anglers with a solid build. Please refer to the products with the "Massivo" logo.

**RF GRIZZLE POWERED GLOVE**

Ripple Fisher original fishing gloves. By using NanoFront material, which has excellent durability, grip, and fit, and by placing anti-slip rubber, we have created a stronger grip for big targets. The material itself is thin and flexible, making it useful in a variety of situations, both offshore and shore.

**Price:**

- Size : M · L · LL · Massivo 3L

more detail

- The NanoFront material used in the palm and fingertips is a high-strength ultra-fine fiber material that provides a high grip even when wet. Anti-slip rubber is placed at the base joint of the finger, which provides support during long fights with big targets.
- The back of the hand uses a stretch honeycomb with high elasticity and excellent water absorption and quick drying properties.
- One side of the finger is made of mesh, which is highly breathable and comfortable even for long periods of use.

**RF Multi Container M / L**

# Oceánica

FOR UNRULY PASSIONATE ANGLERS

Spin-off From RippleFisher

*Ripple Fisher*

#### PROJECT OF OCEÁNICA

In the spring of 2025, Ripple Fisher will launch a new project. Its name is "Oceánica". The project is a spin-off series of Ripple Fisher, with a lineup of models with a new concept based on the fusion of commercial fishermen and recreational anglers. In addition to gear, we plan to develop swim-bait rods, for example, with modern functionality. As a first step, we have packed the stylish and excellent functionality into the tubular design "Oceánica-DFT" which is developed for tuna fishing with bait. We bring a new sense and style to this category, which is said to be dominated by glass solid materials.

RippleFisher Development Team

Oceánica DFT511/PE12-15

Oceánica DFT61/PE6-8

# Massivo

LIKE NO OTHER *Hands Craft*  
*Ripple Fisher*

#### PROJECT OF MASSIVO

For nearly 25 years, Ripple Fisher has worked with anglers to develop a wide range of products. In the process, we have faced various challenges due to differences in physical strength and size. Most notably the inability to achieve the maneuverability envisioned during development, due to the lack of strength or reach due to the size of the angler. Therefore, from 2025, we will launch a project called "Massivo" in parallel with "Oceánica", aiming for Ripple Fisher to become closer to your fishing life. It will take a considerable amount of time to develop, but as a trusted brand, we will slowly but surely move forward step by step. In 2025, we plan to release gear and clothing as our first step. Stay tuned for more information about the "Massivo" projects.

From 2025, we will offer a size lineup that can accommodate those with a solid build. Please refer to products marked with the logo on the left from page 52~55.

### After Service & Support

#### Precautions for use

- Do not cast with a tangled line or line trouble in the reel. This may cause the rod to break. Furthermore, if you miss or forget to put the line through a guide, this may result in damage or breakage of your rod.

#### About the joint section of the rod

- The joint section of the rod of Ripple Fisher has been adjusted with high precision. If ferrule wax has been put on or connected rods without wiping salt water off, might cause fixation.

#### Maintenance and storage

- Wash the rod with running water to rid of any filth and salt. Then wipe off any excess water. If you store your rod without wiping off excess water, this may cause blisters on the blank and, rust the guides.

#### Contents in this catalog

- Include accurate specifications of rods, written in accordance with the regulations set by the Japanese National Fishing Rod Fair Trade Conference.

#### Requesting repairs

- Please be aware that personally modified rods will not be covered by warranty (even if it is within the warranty period).
