## Picking up a Ripple Fisher rod means choosing to go "beyond your limits."

We now live in an age where, no matter where we are, flat screens instantly thrust upon us vast amounts of information. We seem complacent as simulated encounters streaming on SNS replace real experiences that would have left a meaningful mark on our lives. We may be unknowingly letting go of our resolve to push our limits and enjoy the genuine thrill of reality."

Pushing our limits always comes with the risk of losing. We may feel we are wasting our time and physical effort, or even hurting our self-esteem. But, if those challenges are overcome, they will reward us with experience, growth, and a sense of accomplishment.

These rewards are irreplaceable and can only be gained through challenging yourself.

The same is true for rod building. An immense amount of time and passion is poured into creating every single product, from concept to completion. The prototypes created by the designers are passed on to the field staff, who then devote their time and energy to test them in the field under harsh and demanding conditions.

In our factory, craftsmen perform much of the production process by hand instead of depending entirely on machinery. Every step requires refined skill and careful craftsmanship.

We don't impose any limits on ourselves. By facing each challenge head-on, and through repeated trial and error, we gain experience and knowledge, making improvements until the rod takes shape as a final "product". Not just a tool, it is also a testament to "design without boundaries" and "evolution driven by human hands".

Once these final "products" reach our loyal users, they become irreplaceable tools which forge new paths into the future as a trusted partner. This is exactly where we, as a rod manufacturer, strive to be.

For us, anglers are more than just users. You are our partners who stand by us as we break through limits and you are the very core motivation that sustain our craftsmanship. Driven by passion for challenge and exploration, we are able to continuously push our boundaries to give rise to new designs and technologies.

"Ripple" is what we have adopted as our brand name to represent our spirit of challenge and evolution.

For us, anglers are more than just users. You are our partners who stand by us as we break through limits and you are the very core motivation that sustain our craftsmanship. Driven by passion for challenge and exploration, we are able to continuously push our boundaries to give rise to new designs and technologies.

"Ripple" is what we have adopted as our brand name to represent our spirit of challenge and evolution.

Through challenges that push the limits, we want anglers to feel the "true strength of our products".

With each such experience, Ripple Fisher rods will evolve from mere tools into a droplet that create ripples spreading into the future for individual anglers.

Limits end. Strength begins.

This is the reason why Ripple Fisher will continue to be Ripple Fisher.

SilverStream / Shore & Boat Casting

Seabass / Flatfish / Cherry Salmon / Others

The true allure of the technical casting game lies in the process of discovery. Standing before vast fields—rivers, surf, breakwaters, and rocky shores—you must decipher the subtle feedback transmitted through the rod, piece together the puzzle, and locate the fish hidden among countless potential spots.

The speed at which you can identify the pattern... this analytical process is the essence of the sport and the moment where the strategic depth of the game is felt most intensely. Forged in these demanding environments, the Silver Stream series has evolved by offering models specialized for diverse situations, honing the performance of each rod to perfection.

Pursuing this highly segmented game with a refined, sharpened style—this is the true spirit of Silver Stream.

In 2026, we set our sights even higher as we completely restructure the Silver Stream series. We are introducing a new lineup adapted to the ever-changing fields and modern conditions. Each model is built upon a distinct, aggressive concept, delivering specialized performance tailored to specific targets and situations. While they stand apart from conventional rods, it is precisely these unique concepts that generate peerless performance. And that performance is the very core of what we have always sought in the Silver Stream.

SilverStream Stiletto "Master Exclusive"

# SilverStream Stiletto MX / Master Exclusive

The key to success in high-pressure waters is the ability to clearly interpret subtle changes in the currents, changes in topography and structure, and to quickly detect these changes. The Stiletto MX, constructed exclusively from high-modulus carbon, features an ultra-highly-sensitive blank achieved by relentlessly eliminating unnecessary material. This enables the rod to sharply detect even the slightest variations in water flow and lure load. You could say that this is an expert model where its true values will be demonstrated in selective situations when the fish are inactive. Although it is not an easy-to-use series, the deliberate elimination of the automatic elements in a rod, fully brings out the angler's senses and techniques. Every action—whether "maneuvering" the lure or letting it "pause"—becomes precisely refined, making this a master-grade rod worthy of the name "Master-Exclusive."

\*The Stiletto MX series is constructed of high-modulus carbon. Excessively high sticking the rod, strong impacts to the blank, or scratching on the delicate blank may result in damage or breakage of the rod. Please handle with care during usage.

## 2026 NEW SilverStream 81 Stiletto MX

The refined sensitivity of the 81 Stiletto MX combines both "sharp sensitivity," which instantly transmits physical signals, and "soft sensitivity," capable of detecting even subtle changes in water pressure. This high-speed model accurately detects subtle changes in current and any fish in pursuit, aiming to minimize the reaction time from anglers once the rod sends the signal. While comfortably controlling minnows weighing around 28g, its sharp sensitivity and delicate maneuverability allow anglers to utilize sinking pencil type lures around 8g for micro-bait patterns. Optimized for high-precision casting in daytime sessions, reading subtle current changes while wading in the dark and capitalizing on the smallest bites when faced with inactive fish. When conditions get tough, the ultra-highly sensitive 81 Stiletto MX is in its element. The ultra-high sensitivity of the 81 Stiletto MX is at its best in challenging situations. (This updated model builds upon the original 81 Stiletto with refined performance.)

## 2026 NEW SilverStream 95 Stiletto MX

The 95 Stiletto MX represents a bold new direction for the Stiletto MX series, combining its defining traits of razor-sharp sensitivity and delicate maneuverability with exceptional fishing efficiency and long-distance casting performance. Despite its 9-foot-5-inch length, it offers superior controllability comparable to the 81 Stiletto MX, not only allowing anglers to lightly perform dog-walking and jerking actions with lures in the 10-32g range but also the ultra-finesse drifting game, detecting even the slightest irregularities under extremely slack line conditions. With the combined ability to search vast expanses of water with excellent long-distance castability and efficient operability, this all-round model demonstrates its true values in various situations – from large rivers, open-water wading, precision casting around structures and drifting method for the night game. The 95 Stiletto MX boasts unparalleled versatility, with sensitivity, controllability, and long-distance casting performance honed and elevated to their absolute limits, making it the definitive symbol of the Stiletto MX series.

## 2026 NEW SilverStream 100 Stiletto MX

The 100 Stiletto MX has been meticulously refined to deliver overwhelming long-distance casting performance for efficiently covering vast fields such as large rivers, shallow rocky shores, and open-ocean surf zones, while also providing the robust torque needed to handle heavyweight, powerful trophy-class seabass. The highly modulus blank provides a crisp casting feel, allowing for a wide range of lures, including large minnows, heavy drag wake baits, and jig minnows, ensuring accurate delivery of your lure even in adverse headwind conditions. The highly responsive tip section, engineered with its excellent reeling sensitivity, accurately transmits even the slightest signals, such as current changes and lure drag, maintaining clear sensitivity even when the lure is at a distance. It also responds well to delicate maneuvering of small lures weighing around 12g. When fishing long distances across expansive waters, the 100 Stiletto MX offers the series' highest level of casting performance and precise control, allowing you to seize moment.

## 2026 NEW SilverStream 911B Stiletto MX

By integrating the series' signature crisp sensitivity and delicate operability into a highly versatile baitcasting platform, this rod further elevates the potential of the Stiletto MX series. Featuring a highly-modulus blank of the series, it delivers an exceptionally manual, angler-driven feel, enabling precise control across varying depth ranges from the surface to the bottom. It handles a wide spectrum of lures with outstanding accuracy—from small minnows around 15g to heavyweight big minnows and jointed-lures up to approximately 2 oz in weight—allowing anglers to go after monstrous seabass. Despite its high-modulus construction, the blank bends sufficiently once loaded. As it bends further, the outstanding butt power is unleashed, providing the strength needed to violently pull fish away from tetra structures, bridge pilings, and turbulent breakwaters. Powerful yet refined, and supple yet precise, the 911B Stiletto MX sharpens the angler's senses to their limit. It represents a new pinnacle in baitcasting rod design, purpose-built to master the increasingly complex demands of modern-day seabass anglers.

SilverStream 100 Stiletto MX

Reel seat

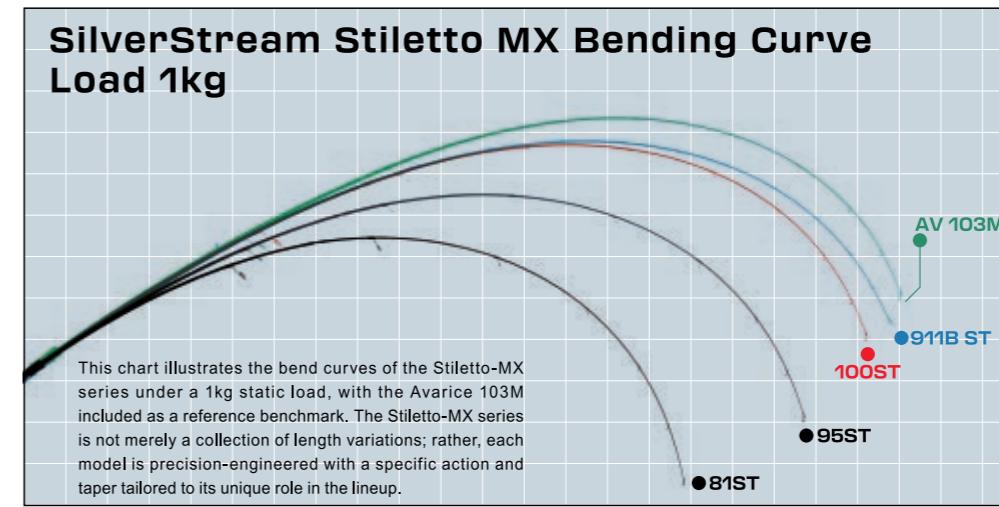

Front grip

The reel seat features a hybrid design combining a Fuji SKDPS with our original custom wood insert. This wooden component eliminates the uncomfortable gaps often found in skeleton seats, creating a seamless, ergonomic profile that fits naturally in the palm. This design significantly reduces hand fatigue during the repetitive casting required in seabass fishing, offering the perfect balance of sophisticated aesthetics and practical functionality.

Models 95, 100, and 911B feature a custom wooden foregrip equipped with an integrated hook keeper at the top end. This rubber-lined hole allows you to securely stow your hook, making it ideal for quick spot changes or for positioning your lure alongside a trophy Seabass for photos.

## SilverStream Stiletto MX Bending Curve Load 1kg

This chart illustrates the bend curves of the Stiletto-MX series under a 1kg static load, with the Avarice 103M included as a reference benchmark. The Stiletto-MX series is not merely a collection of length variations; rather, each model is precision-engineered with a specific action and taper tailored to its unique role in the lineup.

- 81ST - Featuring the crispest blank in the series, the 81ST offers overwhelming control and the direct feedback unique to a shorter rod. It excels in pinpoint casting accuracy, yet despite its compact length, it delivers surprising distance, making it a versatile performer across a wide range of fields.
- 95ST - The 95ST is the flagship high-balance model of the lineup, achieving a perfect fusion of casting distance, controllability, and power. It feels like an extension of your arm the more you use it—a reliable all-rounder capable of handling any field, in any season.
- 100ST - This model is characterized by tremendous casting distance that scales linearly with your swing speed. Far from being overly stiff, it features a sensitive tip and belly section capable of hooking short bites and executing delicate lure presentations. It provides a distinct advantage in large rivers, rocky shores, and surf games, even under strong winds.
- 911B ST - A specialized model designed to unlock the strategic potential of baitcasting tackle. The blank retains moderate tension right through to the tip to enable high-precision line control during drifts and falling actions. With a sharp, wobble-free casting feel, it supports precise and technical game plans.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

# SilverStream Apis

## SilverStream Apis / Boat & Shore Seabass Game

This technical model has been refined to the utmost to deliver exceptional casting accuracy for close-range fishing, such as boat seabass fishing, small scale rivers, and structure fishing in the inner bay areas. The Apis series have consistently strong stiffness throughout the blanks, resulting in the sharp sensitivity and response unique to short length rods. The rod that faithfully responds to the angler's intentions, truly embodies the concept "control at will", demonstrating outstanding control to send lures precisely into the intended spots - at the edge of structure, on the edge of the light/darkness of streetlights, and deep into standing posts and berths. In contrast to the power-oriented game envisioned by the Big-Bait series, these rods have been developed for the more delicate approach for both boat and land-based casting.

## SilverStream Apis / Boat&Shore Casting

### 2026 NEW SilverStream 72 Apis

The Apis series is renowned for its crisp, responsive action that enables pinpoint casting around complex structures, and the 72 Apis is the model that most vividly embodies this defining characteristic. Designed with a strong focus on sharp, speedy action, it excels at working jerk-baits around 15 g, executing dog-walks with pencils, and delivering decisive popping actions. It also boasts high sensitivity, allowing for the delicate retrieval of sinking pencil lures under 10g, which are used during the spring runoffs. Centered on boat seabass fishing, the 72 Apis is also ideal for light casting targeting small migratory species such as Spanish mackerel and mahi-mahi with jigs or blade-baits, as well as for technical land-based casting that relies on finesse tactics around inner bays and seawalls. The 72 Apis is an essential tool for anglers who prioritize precise control and tactical game development to induce that rare bite.

### 2026 NEW SilverStream 71B Apis

By combining the direct control and stable retrieval characteristics of baitcasting reels with the delicate blank of the 71B Apis, this rod allows anglers to clearly sense changes in lure posture and underwater resistance. It is engineered for exceptional operability, enabling varying speed control, drift-based approaches, and precise tracing of the feeding range. Designed for anglers to approach structures, light/darkness transitions, and subtle changes in terrain without missing even the slightest signs of contact. Its flexible bending also accommodates a variety of casting styles, delivering exceptional response even in situations that demand pinpoint casting accuracy down to mere centimeters. In addition, the powerful butt section generates persistent torque during the fight, ensuring reliable strength required around tetrapods and boat-side situations. Combining exceptional castability, precise lure control, and the inherent power characteristic of baitcasting setups, the 71B Apis is a shooting model that sets a new standard for both boat and shore fishing.

# SilverStream BIG BAIT / Big Bait Game

Big bait fishing is the ultimate strategy when predators lock onto large forage like Gizzard Shad, Sardines, Mullet, and Spent Ayu. This dynamic style, whether from boat or shore, continues to captivate anglers worldwide. Driven by pioneering anglers pushing the limits, this game has evolved beyond Seabass to target species like the mullet-eating Akame (Japanese Lates), the northern monster Japanese Taimen, and Lake Trout.

The Silver Stream Big Bait Series is designed to manipulate large to super-giant lures ranging from 1.5 to 10oz, offering a multi-faceted approach to this thrilling game. In direct contrast to the Apis series, which specializes in delicate precision, this series is dedicated to the raw power game—built to cast boldly and dominate fights in both boat and land-based game.

## SilverStream 60 BIG PENCIL

This rod is designed to target seabass off-shore with the use of big-bait lures. Anglers will be able to cast and maneuver large pencils easily to induce bites from seabass feeding on massive bait fish during specific seasons of the year. We are also planning to release a long-handle (sold separately). By attaching the long-handle, anglers will be able to easily cast and use the rod from the bow of the boat, in addition for use with land-based fishing.

(The length of the rod with the long-handle will be 6.9ft)

### Long Handle (60 Optional Parts : 60→69)

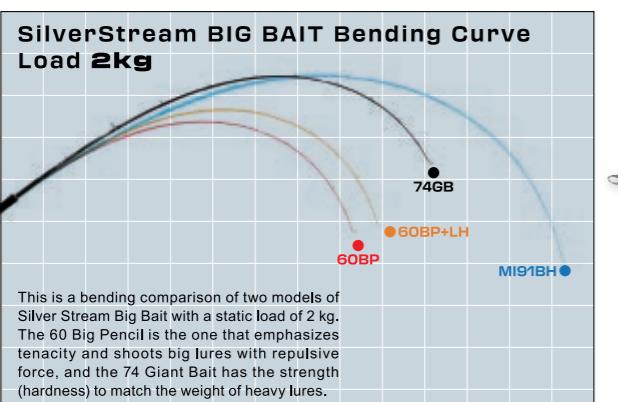

Longer handle for Silver Stream 60 Big pencil is available as an option.

\*It is sold as just handle itself.

The whole length will be 6ft 9inch when the long handle is equipped. The length from the trigger to the end of the grip will be extended 115mm, and to the top of the front grip will be extended 95mm. If you are required distance cast or wish to have more stability when you manipulate lure or fight with big fish, this long handle will support you, don't matter from shore or offshore.

## SilverStream 74 GIANT BAIT

The 74 is a special model able to cast out super giant baits exceeding 300mm and 250g. The 74 is approximately two levels more powerful compared to the 60. While being able to overhead cast super size joint baits, anglers are also able to lightly control smaller 3oz lures. It is ideal to maneuver joint baits with the sharp rod action and will outperform most rods off-shore and land based.

# SilverStream NORTHERN

The Silver Stream Northern is a specialized series designed with a clear strategic focus: to target the Sea Trout (Cherry Salmon) and Flounder typical of northern waters. In demanding fields—such as shallow rocky shores scattered with submerged reefs or surf zones where the break line lies far offshore—the absolute necessities are overwhelming casting distance, precise control, and sensitivity.

To fully extract the potential of various jigs and jig-minnows, the series incorporates a dedicated "Northern" design philosophy that balances distance with delicacy. This includes a slim blank profile to cut through the wind, an extended grip configuration to efficiently transfer the angler's power, and a flexible tip section that follows the fish's movements, reducing hook-offs. Condensed with the essential elements for conquering northern areas, this series is the perfect match for anglers who pursue a highly refined and technical game.

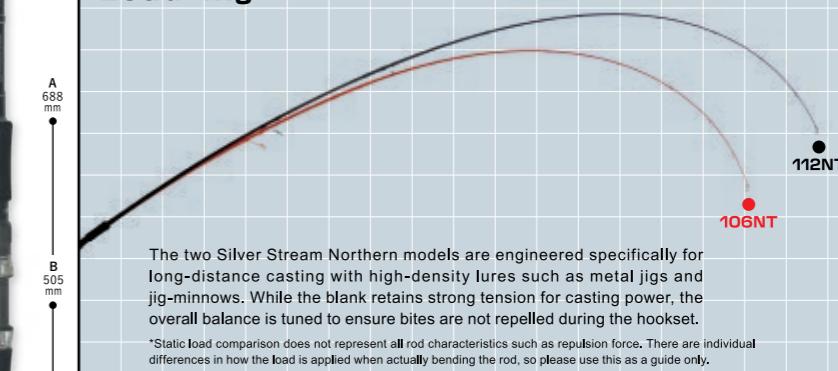

## SilverStream 106 Northern Nano

This model is ideal to cast metal jigs and jig minnows up to 50g in weight from rocky headlands and technical rock formations, which require a quick and tricky cast and retrieve. With its sharp characteristics, anglers will be able to cast accurately while controlling the jig at ease. Having said that, the rod will bend nicely once the rod is loaded and will prevent any loss of fish from the targets lip ripping. Furthermore, it possesses the butt power to aggressively stop the violent fish from diving into the rocks and structures.

## SilverStream 112 Northern

The 112 Northern is a sharp rod designed for long distance casting and will enable anglers to cast out metal jigs and jig minnows up to 60g from the surf and other major points by utilizing the whole rods repulsive force in strong head and side winds. With its high sensitivity, this rod will become your ultimate weapon when the fish are far and you need to search a vast area. Furthermore, the long rod length will help you avoid any rocks or structures nearby and it also possesses the butt power to rip off the monstrous flounders from the seabed.

# RunnerExceed

The Runner Exceed series are premium land-based casting rods engineered to meet the extreme demands of targeting monstrous fish from the rugged shorelines. Designed for powerful pelagic species such as yellowtail, kingfish, and amberjack, as well as GT and dogtooth tuna inhabiting regions with temperate currents, these rods are built for anglers who head out to the harshest environments with a singular goal—to land their fish.

At the heart of the Runner Exceed series lies Ripple Fisher's defining philosophy: "strength". This does not simply mean stiffness, but the true power generated through the bending of blank, enabling anglers to continuously apply pressure on the target during the fight.

With exceptional controllability, consistent casting distance and superbly balanced fighting performance, the new Runner Exceed series delivers a decisive advantage to hard-core land-based anglers who seek to capitalize on every given opportunity.

The six main models are designed to target pelagic species such as yellowtails, amberjack, and kingfish, which easily exceed the 10 kg mark. In 2026, the PE class baitcasting model 100BMH will be added, enabling more versatile strategies that will keep you one step ahead of the game in this highly competitive scene.

Additionally, the four Extreme Models, engineered exclusively to land truly monstrous trophies, are built to unleash their full potential in the harshest environments, opening a new chapter in land-based game fishing.

The newly categorized EX (Expedition) 3-piece model, has been thoroughly refined in its performance as a new option for expeditions, and as a multi-piece model for anglers who never stop exploring untouched waters along the shoreline. Designed for rock shore anglers who challenge their limits, these rods deliver the lightness, control, resilience, and raw strength needed to reliably support the angler under the most extreme conditions.

# RunnerExceed MAIN MODEL

The Runner Exceed main lineup is tailored for targeting blue runners across a wide range of fields, from nearshore Yellowtail to Kingfish on isolated offshore reefs. The plugging models, 104H and 110H, feature blanks designed to prioritize the water-holding action of diving pencils. Flexible yet tough, they allow the rod to bend deep into the butt, applying constant high pressure on the fish during the fight. Complementing these are the technical models, 95TC and 103H. With their crisp tension and sharp handling, they offer high versatility for both jigs and plugs. We have also added the new 100BMH, a technical baitcasting model that perfects the casting feel for approaches using a diverse array of lures. Strategies in the rockshore game vary greatly depending on the field and conditions. These six strictly selected models are built to allow you to fully enjoy every aspect of these diverse scenarios.

2026 NEW

## RunnerExceed 100BMH / Overhead reel Model

This technical baitcasting model expands the possibilities for anglers to utilize baitcasting setups for land-based fishing, enabling a variety of lure approaches. Built on a high-modulus blank, it delivers a light yet crisp stiffness in the blank, allowing anglers to delicately control sharp jig actions and subtle changes in the action of top-water lures. In a market dominated by baitcasting rods designed for large lever-drag overhead reels, the 100BMH stands apart with an uncompromising focus on casting feel and ease of use, balanced with mid-size 400-class reels. The result is a rod that delivers exceptional castability and refined casting feel, seamlessly combining long-distance casting performance with precise lure control. The combined stability during retrieval, direct/responsive control, and exceptional power during the fight, this rod allows anglers to read field conditions accurately and expand their tactical options, leveraging the unique rhythm and tempo that only baitcasting tackle can provide. A true land-based baitcasting model designed to elevate versatility and anglers' performance.

## RunnerExceed 104H Nano / Plug Model

104H is while being able to easily control diving pencils through its soft tip, once the rod is loaded with the fish, it will exhibit its true power and potential. Compared to the current 103H, more flexibility is given to the belly section, allowing anglers to lift the rod higher to withstand the final thrust of the fish in close range.

## RunnerExceed 110H Nano / Plug Model

The 110H is a next generation plugging model for land-based anglers with a light feel but possessing the power of a HH class rod. With the outstanding rod balance, this rod draws a sharp contrast from those ordinary long length high powered models on the market. The flexible tip section brings about various positive attributes. Although it is classed as a 'H' class rod, the potential of the blank is comparable to the power of those 'HH' class rods, able to go head to head with Kingfish ranging from 10~15kg in shallow waters.

## RunnerExceed 95TC

The 95TC is a technical model with a highly responsive blank design to maneuver the lure on a next level. The developmental concept of this model was to enable anglers to utilize various lures including sinking minnow, poppers, diving-pencils and jigs to induce bites in difficult conditions when the sea is flat and the lure is highly visible. The light weight 9.5ft length rod has a MH class strength for fighting 5~10kg blue runners off the rocks. With its outstanding casting distance and highly well balanced characteristics, anglers can utilize this as your main rod or back-up rod for your more exotic expeditions.

## RunnerExceed 103H

This is a power up model of the 911MH for use with both jigs and plugs targeting blue-runners around the 10kg mark. Although the cast feeling is sharp, the 103 length of the rod will load up nicely to apply pressure to the fish. For those anglers who prefer the use of plugs, the sharp casting feel will be ideal for you. Anglers will be able to utilize both poppers and pencil type lures with a more manual action.

## RunnerExceed 107BH Nano / Overhead reel Model

The blank itself is extremely flexible and tenacious yet possesses a sharp tip to belly section for accurate casting. The butt section is highly repulsive once loaded. Anglers are able to utilize various size lures while capitalizing on the advantages of the long-leader system with the use of either nylon or fluorocarbon leaders. Anglers won't be stretched even on the bad footing and will help you target that dream monster class fish off the rocks. Although it is flexible enough to cast light plugs, anglers will be able to stop the violent run from 10kg + Kingfish and lift the fish. Once the rod is loaded, the bending curve will slowly transfer towards the angler, allowing the rod to smoothly bend even with the smaller 3kg~6kg fish, yet possessing underling power for those monstrous fish.

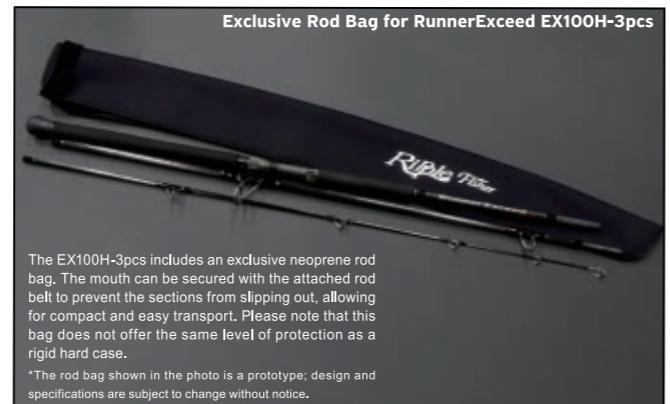

# RunnerExceed EXPEDITION MODEL

The Runner Exceed Expedition models are rods created for land-based anglers who are truly committed to target trophy-class pelagic fish and are willing to put in the time and effort required to do so. They are designed not only for exotic island expeditions accessed by aircraft or high-speed ferries—where strict baggage limits apply and encounters with large pelagic are more likely—but also for anglers who relentlessly search their local waters on foot, traversing rugged and demanding terrain. It will greatly expand the range and anglers' options, even for remote island trips and long-distance travel. We hope you'll be able to first handedly try our new series pioneered by the Runner Exceed Expedition Model.

2026 NEW

## RunnerExceed EX100H-3pcs

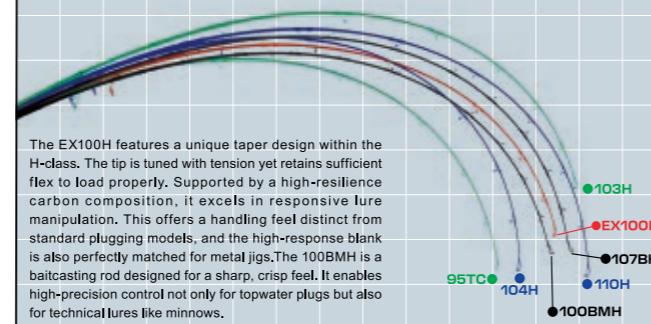

The EX100H is a 3-piece/multi-piece land-base rod that is a must have item for demanding fields where bringing multiple rods is difficult and dangerous, such as remote island expeditions and rocky cliff faces. Targeting 10kg-class blue-runners, it boasts a supple feel that allows for effortless handling of 220mm-class diving pencils, small-mouthed poppers, and even jigs weighing 150g. Its high maneuverability allows for versatile approaches with this single rod. Even when an unexpected monstrous fish strike, the rod's strong repulsive force delivers speedy lifting capability, while its tenacious torque provides great advantage in the intense battles around rocky headlands that are unique to land-based fishing. Built to explore uncharted waters, the EX100H is a powerful expedition model that combines the maneuverability, versatility, and strength that land-based anglers seek.

The EX100H-3pcs includes an exclusive neoprene rod bag. The mouth can be secured with the attached rod belt to prevent the sections from slipping out, allowing for compact and easy transport. Please note that this bag does not offer the same level of protection as a rigid hard case.

\*The rod bag shown in the photo is a prototype; design and specifications are subject to change without notice.

## RunnerExceed Bending Curve Load 3kg

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

# RunnerExceed EXTREME MODEL

The Runner Exceed Extreme Model series is dedicated to the challengers who never stop pushing the boundaries. The heavy rockshore game takes place in unforgiving environments where danger is a constant companion. Yet, the joy of overcoming these hardships to land that one glorious fish is an experience unlike any other. In recent years, as new fields are discovered and information spreads, expeditions to uncharted waters around the globe have become more accessible. However, faced with the overwhelming power of nature and unknown monsters, there are moments when even human wisdom and effort are simply not enough. No matter how experienced the angler or how perfect the preparation, defeat and frustration are inescapable realities. That is precisely why this game is so demanding—and why it is worth the pursuit.

The excitement and emotion that await at the end of the challenge give that catch a special value beyond the weight, making it a lifelong goal for the angler. Everything is for that one moment. As long as there are anglers who continue to challenge the impossible, Ripple Fisher will be there to challenge it with you.

The 100SXH and 101BXH possess the greatest power in the Runner Exceed series, yet have been refined for an even lighter, sharper handling feel. The 83HH maximizes the advantages of a shorter length to enhance power-fighting performance and big-plug manipulation. This model proves its true worth in specific, demanding situations. The 100SHH LIMITED offers high versatility within the Extreme lineup. Its blank, designed with a specialized carbon composition, combines high resilience with a lightness that defies the standard for heavy rods.

Born for anglers who push the limits, these four models represent the pinnacle of Ripple Fisher's dedication—the Extreme Model series, demonstrating its true value in the most extreme conditions.

## RunnerExceed FINAL STAND UP 83HH

The 8ft3inch short length blank with tenacious strength in the belly to butt section will effectively apply pressure on the fish once loaded. By shortening the overall length of the rod, it has allowed anglers to consistently apply pressure on the fish during the fight while being able to fully cast out large size lures with the least amount of effort. Furthermore, the short length will reduce the strain on the angler when utilizing large mouthed poppers, conserving the energy of the angler until the fight begins. We are confident that the 83HH will bring about great advantages to the anglers when unexpected monstrous fish attack your lure with its light controllability and highly responsive blank which will continuously and effectively apply pressure upon the fish.

## RunnerExceed FINAL STAND UP 100SXH

Boasting the strongest power in the series, the 100SXH is a high-powered rod that is designed for anglers to go head-to-head with the large species. It takes a certain amount of physical strength and skill to be able to swing it around, but if you can, it is a lethal weapon. The highly resilient blank will allow anglers to cast out large lures with ease, while lightly controlling the lures and guiding the large species. Once you get the hang of this rod and it becomes part of you, there is no looking back. It is a rod that makes anglers grow.

## RunnerExceed 100SHH LIMITED

Our goal was to create a rod that possess the power of an XH class rod while having the lightness of a H class blue runner rod. The whole rod is stiff including the tip section, able to sharply cast out lures with the strong repulsive force from the blank. Anglers can not only comfortably cast and control large lures weighing 150g, but can also cast out smaller lures weighing 40g by loading the rod with the weight of the lure. With the strong repulsive force, the rod is also ideal for use with jigs. Anglers will easily be able to aggressively fight fish around 10kg with the outstanding lift power and tenacity. This is a highly resilient carbon rod not only ideal for anglers targeting monstrous size blue-runners but also great as a entry level land based GT rod.

## RunnerExceed FINAL STAND UP 101BXH

Not only does it offer the advantage of the use of various line systems, but it also has a sharp cast feel and torqueful butt power. With its excellent balance, the overwhelmingly powerful rod feels light allowing anglers to comfortably swing it around all day long. We've packed all the elements needed for the land-based big game fishing with all the benefits of the bait-casting tackle. This is RippleFisher's current answer for land-based big game fishing with bait-tackle set up.

The grip profile of the 101BXH is specially shaped to facilitate precise line mending and provide superior leverage during the fight. It also incorporates an anti-slip rubber grip, ensuring a firm and reliable hold even under extreme loads.

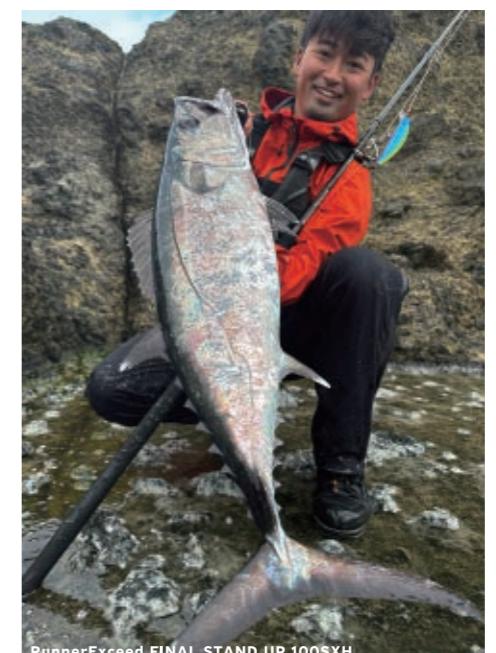

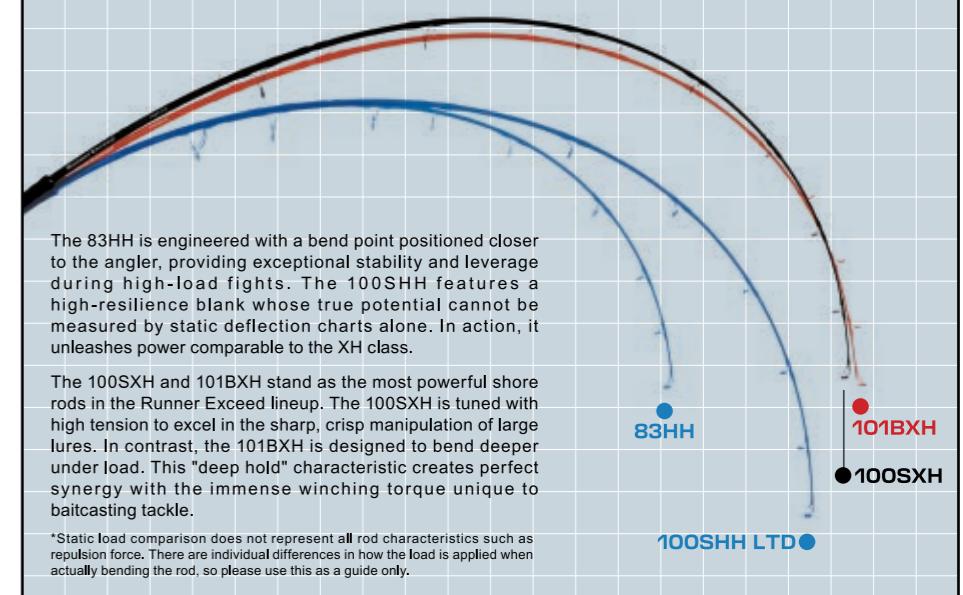

The 100SXH is equipped with a ribbed rubber foregrip designed to maximize grip retention. Its exceptional anti-slip properties ensure a secure hold even under the immense pressure of high-load fights, providing the angler with a decisive advantage.

To maximize casting distance despite its short length, the 83HH features a Fuji RV guide as the butt guide, selected for its superior line release. By significantly reducing line slap at this first guide, it allows for a stable and powerful casting stroke even with heavy-gauge PE lines, achieving distances that defy the rod's compact size.

# MonsterImpact

## MonsterImpact / Shore Casting for Monster

Black fin Seabass / BlueRunner / Red Eye / Seabass

The Monster Impact series is a special-class series designed to target blackfin seabass, Akame (Japanese barramundi), seabass, and even medium-sized pelagic species off the rocks. Large specimens are notoriously wary and elusive, refusing to react to simplistic or conventional approaches. For such difficult targets, anglers will be required to apply their skills, experience and judgement accumulated over the years. The Monster Impact series emphasizes situation-specific adaptability, combining highly technical operability that enables refined lure control with an optimized action response.

This has enabled us to deliver uncompromising, field-proven performance for those hardcore anglers around the world. The 110HH and 110BHH offer outstanding versatility, formidable butt power, excellent casting distance, and pinpoint casting accuracy, providing a significant advantage in the demanding land-based game fishing.

The lineup also includes a variety of models, including the 113HH/4pcs, which features a four-piece design for increased portability, and the 90H and 91BH, which are purpose built for large seabass and Akame. In 2026, the new 94HH will be released.

The 94HH offers exceptional versatility, supporting pelagic species from breakwaters and shallow rocky shores using seabass plugs and minnows up to the 17 cm in length, while also able to handle big-bait lures for large seabass and Akame. Despite its slim blank profile, it delivers unimaginable torque and power to overcome your monstrous targets. Through these six models, you'll be able to experience the new generation of "power rods" in the Monster Impact series.

2026 NEW

### MonsterImpact 94HH Spinning Model

This model was developed primarily for pelagic species using 12-17cm class minnows. Its carefully balanced length optimizes both casting distance and lure control, while a moderately crisp blank delivers excellent operability, handling everything from high-speed retrieves to sharp, well-defined jerking actions with ease. Under heavy load, the entire rod bends smoothly throughout the whole blank, and its design provides excellent absorption, allowing you to enjoy the thrilling fights with blue-runners while minimizing stretched hooks and rip-offs, even with MH-class hooks. The guide setting, optimized to match the rod's proprietary taper design, ensures smooth line flow and a stress-free casting. In addition to blue-runners, this rod is also suitable for monstrous seabass and Akame with the use of big-minnows and big-baits.

### MonsterImpact 90H Spinning Model

This is a specially tuned seabass model to easily cast through with big-baits (70g) and even small minnows from 20g. The butt section has been enhanced to easily stop lunker size seabass and Red-Eye (Japanese barramundi) that are feeding on large bait-fish (Sardines, gizzard shad, and mullets). We aimed to produce a rod where anglers will be able to enjoy casting large plugs a great distance. We present this ultimate spinning rod for the ultimate spinning anglers.

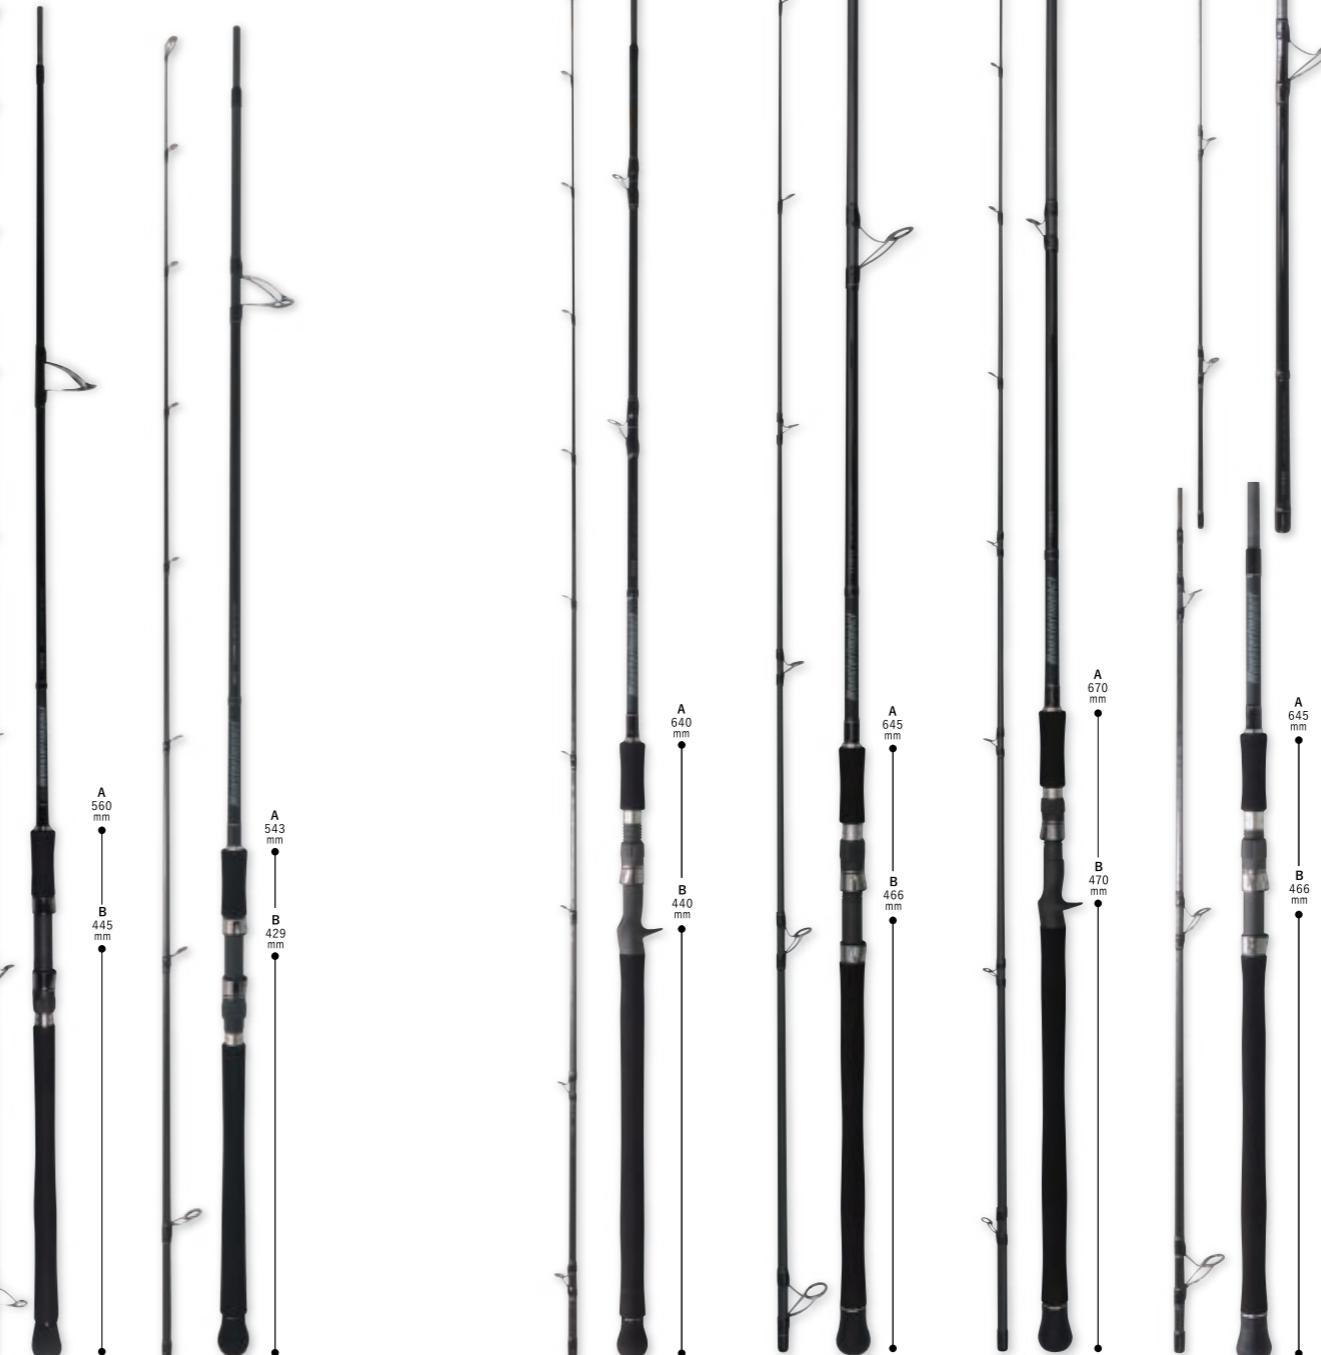

### MonsterImpact 91BH Overhead reel Model

The blank of the 91BH has been shaped for accurate casting and controlling of big bait plugs up to 130g. Although it is a power class model, the sensitive blank will transmit the minor existence of 20g class minnows and will allow easy control. It basically has the same concept as the 90H spinning model but has a greater range of lure usage and allows anglers to utilize thicker and longer leader systems advantageous in overhead reel tackle settings. The direct controllability of the lures and consistent casting accuracy will surely help you further enjoy your big-bait game.

### MonsterImpact Bending Curve Load 2kg

The 94HH introduces a new concept, combining tenacity and high resilience to absorb violent runs while enabling aggressive power fights. Although it appears to bend more than the 90H in static tests, its unique taper loads deep into the blank to generate immense torque and holding power.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

### MonsterImpact 110HH Spinning Model

The Monster Impact 110HH is built up with material and engineering technology with a flexible yet sharp blank feel. This has helped enhance the casting and control of lures while the sensitivity will transmit the vital information under the water. With its length and castability, it is an ideal rod for use when fishing off elevated large rocks and a stretch of shallow rocky grounds. It can not only cast small 9cm class minnows but also larger diving pencils for your Blue-runners. The flexible belly section will follow through once loaded and smoothly transfer to the highly resilient butt section to easily surface monstrous Blackfin seabass and medium size Blue-runners. We are confident that anglers will be able to enjoy the high performance and total balance of Ripplefishers state of the art technology through the Monster Impact 110HH.

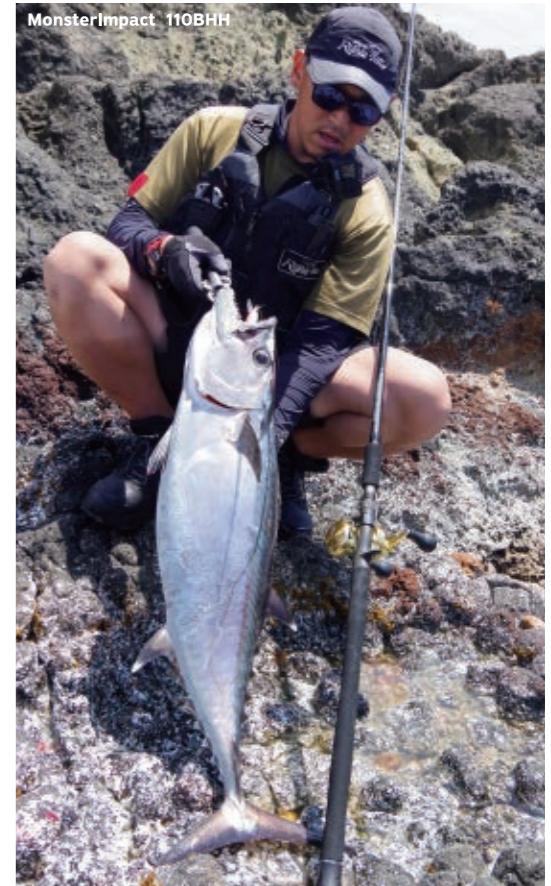

### MonsterImpact 110BHH Overhead reel Model

In highly strong headwinds and side winds, this highly responsive and powerful bait-casting model will help anglers seek a different approach compared to the spinning model. Its absolute casting technology will allow anglers to cast pinpoint accuracy in the tightest spots and anglers will not miss the split-second timing between large sets in the heavy seas. Its fighting response and butt power will enable for a powerful fight against medium size blue runners nearing the rocks. This model will be advantageous in the roughest of conditions and will allow anglers the ability to venture out to locations never set foot in before.

### MonsterImpact 113HH / 4pcs Spinning Model

The 113HH is a powerful pack-rod which allows easier access to your fishing grounds to target Blackfin seabass and Blue-runners. The short 90cm separate length can be stowed in your backpack and freeing both hands of any rods will help anglers safely reach some of the more remote and dangerous land-based fishing grounds. It is a versatile rod able to handle small minnows to medium size diving pencils with a seamless bending curve rarely seen in any 4 piece rod. The rod possesses contradicting qualities of both powers in the butt section to stop the run of monstrous fish and flexibility in the belly section to avoid any hook offs. While being highly resilient this regular tapered blank will show its true potential in the most critical time. The MonsterImpact 113HH/4pcs rod comes with its own special rod bag and a useful neoprene rod bag for your fishing trips. The rod also fits nicely onto the RippleFisher waterproof backpack.

### MonsterImpact 110BHH

# Avarice

## Avarice / Black fin Seabass Game

### Black fin Seabass

Targeting Blackfin Seabass along wave-washed rocky shores means stepping into a world where headwinds, powerful currents, and unstable footing are the norm—a place where no mistake is forgiven. The angler's advantage is razor-thin. Success depends on the ability to read constantly changing conditions and capitalize on the few fleeting opportunities that arise—skills forged through experience and a deep understanding of the field.

To confront this demanding environment head-on, Ripple Fisher presents AVARICE, a series purpose-built for Blackfin Seabass fishing. Built blanks that deliver exceptional sensitivity and strong recovery, the series sharpens the fundamentals—casting accuracy, line control, and fight balance—into a precise, decisive tool. Designed to seize critical moments without hesitation, AVARICE is made for anglers who continue to fight on the front lines of the harshest rocky shores.

### Avarice 104F

This is a special concept model for anglers to target selective lunker size blackfin seabass with the use of smaller lures with pinpoint accurate casting. The slightly shorter length of 10ft4in allows for easy maneuverability and handling, as well as low trajectory pinpoint casting in strong head-winds. The super fast tapered blank is equipped with a sensitive delicate tip to be able to successfully hookup the minute bites from the black fin seabass while the fast tapered characteristics of the rod allowing anglers to safely fight and land fish with its outstanding reach. This is a new concept rod from Ripple Fisher to tackle the ever challenging black fin seabass game.

### Avarice 103M Nano

This 103 length is light, easy to handle and is efficient when fishing from low rock formations or bolder rocks for the black-fin seabass or the normal seabass off the rocks and fishing from the surf for flounders. Although it is short in length, the blank will bend nicely to withhold the fish.

### Avarice 110M Nano

It possesses highly sensitive characteristics required to transmit the short bite of the blankfin seabass, while the flexible blank bends-in to reduce hook-offs due to straightening of fragile hooks. The blank which possess the contradicting characteristics of flexibility and sharpness, allows anglers to sharply cast lures ranging from 10cm to those larger 40g lures. This new standard rod is not only suitable for monster class black fin seabass, but also 5kg class blue runners and snappers off the rocks.

### Avarice 106MH Nano

It possesses a stronger butt section compared to the 103M and with its refined taper design, it maintains the easy handling of the rod while improving its castability. You will be able to first handedly experience how the carbon material has evolved from this 10ft 6inch blank packed with castability, loading power and controllability of the fish.

### Avarice 110H Nano

This is an almighty rod with its ideal length and power settings for use anywhere, anytime. It is capable of cutting through strong headwinds, while having the ability to cast small lures to pinpoint accuracy and not to mention its overwhelming butt power. The Nano blank characteristics can be noticed in the contradicting nature of its sharpness when casting and its ability to bend nicely once it is loaded.

# RealCrescent

## RealCrescent / Light Game

Horse-mackerel / Rock Fish / Seabream and more

The "Real Crescent" series has been finely honed to further enjoy deep and technical light game fishing. They are equipped with the controllability and sensitivity to appreciate the technical jig-head games and also possess the power for anglers to enjoy targeting rockfish and bream. With the easy and light usability, anglers will be able to appreciate the sharp and powerful blank it possesses. The high sensitivity, lightness, beautiful bend curve, and power will respond to each angler's needs for the light game. The new Real Crescent series is the next generation of basic light game rods. We have carefully selected 4 models for the spinning and 3 models for the overhead reel tackle. All models are highly versatile with the potential to target various species in various fields for the light game. We hope you can experience our Real Crescent models to strive for the next stage in light game fishing.

(All models equipped with Torzite K guides and NANOALLOY® Technology blank)

RealCrescent RC-77

RealCrescent RC-65

RealCrescent RC-75

## Spinning Model

### RealCrescent RC-55

This is an ideal model for use with a simple jig-head rig. Overall, it has a sharp feeling to it, but with the use of the NANOALLOY® material, the highly repulsive nature of the blank will bend nicely during the cast. The highly sensitive characteristics of the blank will not only transmit the information on the bite but also the subtle water pressure differences through the blank. Anglers will be able to utilize PE, nylon, fluorocarbon, and ester lines.

### RealCrescent RC-65

This is the standard model that stands as the core for the spinning model. Anglers will be able to experience seamless usage through the fast tapered rod with a flexible tip, resilient belly, and strong butt section. It is a versatile rod for use in various fields with the use of simple jig-head rigs, plugs, Carolina rigs, and even light wind techniques.

### RealCrescent RC-75

It possesses the sharpest feel of the blank in the Real Crescent series for use in not only Aji and Mebaru (Rock fish) targets, but also for various species of rockfish, bream, and for the light seabass game. The sharp tip section will transmit vital information on the current while enabling anglers to use Carolina rigs, Texas rigs, plugs, and metal jigs with a high response. The strong butt section of the rod can deal with unexpectedly large rockfish and bream measuring over 50cm.

### RealCrescent RC-81

This is a long length model designed mainly for use with Calorina rigs and floating rigs, but is also great with 3-5g jig-heads. Compared to the RC-75, the stiffness of the tip section has been reduced for a lighter feel when in use. With its highly sensitive nature, it is an ideal rod for anglers to search the deeper area at great distances.

## Overhead reel model

### RealCrescent RC-57

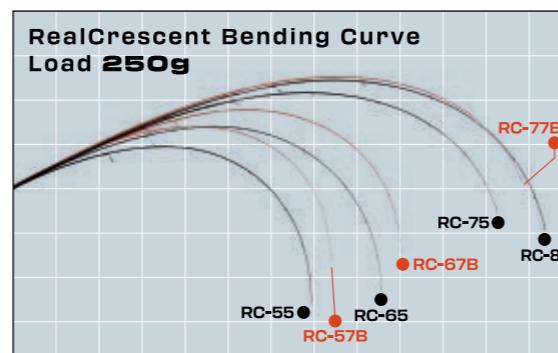

Despite the stiff characteristics of the blank to exhibit the nature of an overhead reel model, it is a finesse model with an outstanding cast-feel. We have designed the rod so anglers can easily load the rod to cast with jig-head rigs weighing less than 1g. It is also ideal for fishing styles that require sensitivity during the retrieval, such as dead slow retrieval of super light lures.

### RealCrescent RC-67

This is the most basic model for the light game overhead reel tackle fishing. With the fast tapered flexible tip section and stiff belly to butt section, anglers will not only be able to cast and control light jig-head rigs but also utilize various rigs, plugs, and metal jigs stress-free. This next generation light game rod will enable anglers to capitalize on the biggest asset of the overhead reel by releasing the clutch while using the lift and fall techniques and drifting techniques.

### RealCrescent RC-77

This is the middle class overhead reel model to target various species of rockfish, bream, and seabass. It is an ideal light game rod to cover various species and fishing styles using "bottom-dragging", "Lift and Fall" techniques with plugs to induce those reaction bites. The whole rod has been designed to be stiff to the tip, enabling anglers to cast lures up to 15g and rip those monstrous fish off the bottom with its outstanding butt power.

The most basic light game model is the RC-65. The RC-55 is designed for use with a singular body jig-head and the RC-75 is for use with Carolina rigs and metal jigs. The RC-81 seems to be the strongest rod but able to utilize a variety of lures with the flexibility of the whole rod. The RC-77 is the stiffest model of the series, suited for bottom knocking and dragging techniques to target rockfish and bream games.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

# MORE ABOUT SHORE CASTING MODELS

## SHORE CASTING MODELS COMPARISON TABLE

## ROCKY SHORE CASTING MODELS COMPARISON TABLE

### <Explanation of Ripple Fisher's Shore Casting Rods>

Ripple Fisher's shore casting category is a lineup that can handle a wide range of species, ranging from light games such as horse mackerel and rockfish to extreme fishing for GT off the rocks. The series are developed according to the nature of your target species to overcome the various situations anglers may face. We hope this will be of reference for you to choose your rod with the following explanations and diagrams.

# SHORE CASTING MODELS PERFORMANCE CHART

### How to Read the Chart

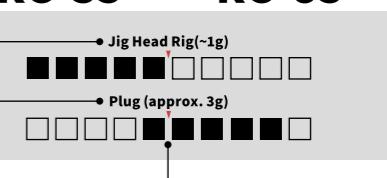

### Model Comparison

Model Name

**RC-55**

**RC-65**

Comparison Category

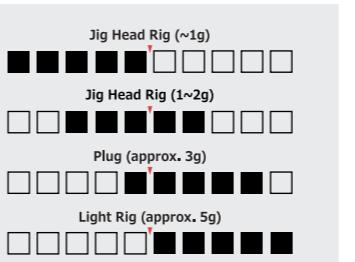

indicates the midpoint. The side with more black squares (■) demonstrates higher performance in that category.

### Shore Casting Model Performance & Characteristic Comparison Chart

This chart illustrates the performance differences between models with similar specifications. For instance, while both the RC-55 and RC-65 are high-sensitivity models, the RC-55 is specifically tuned for operating jig head rigs under 1g. It retains the advantage for jig heads in the 1-2g range as well. However, the RC-65 offers vastly superior usability for plugs around 3g and other light rigs. Therefore, we recommend the RC-55 for a dedicated jig-head style, and the RC-65 for those seeking versatility. Please select the model that best fits your fishing style and priorities.

# MORE ABOUT JIGGING MODELS

## Ocean Arrow SELFISH

Selfish series is divided into categories that can be used for three different actions: bouncing the jig, swimming, and lightly maneuvering. All categories are equipped with the sensitivity to decipher the slightest changes in the current for anglers to control the action of the lure for that instantaneous moment. Rather than seeking the performance of light one-pitch jerking, we were after rods which allow anglers to enjoy the process of technical jigging maneuvers by sensing for the changes under the water. We proudly recommend the Selfish series for anglers who wish to delve deeper into the technical jigging game.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

### SELFISH 3 CATEGORIES

#### NS Natural Swim

##### Specialized for drift jigging

Specialized for situations where fish respond well to swimming-action jigs. This series is also designed to handle scenarios involving the frequent use of lightweight or short jigs, as well as shallow jigging strategies that require casting to search wide areas.

#### SEB SEnsitive Bait

##### Well balanced for Vertical Jigging and Drift Jigging

This series demonstrates its true potential with a diverse range of jigs and patterns, from high-pitch jerking to falling actions. It is specialized for scenarios requiring precise control of the jig falling, such as targeting shallow reef, structure fishing, and Tuna jigging.

#### AJ Aggressive Jerk

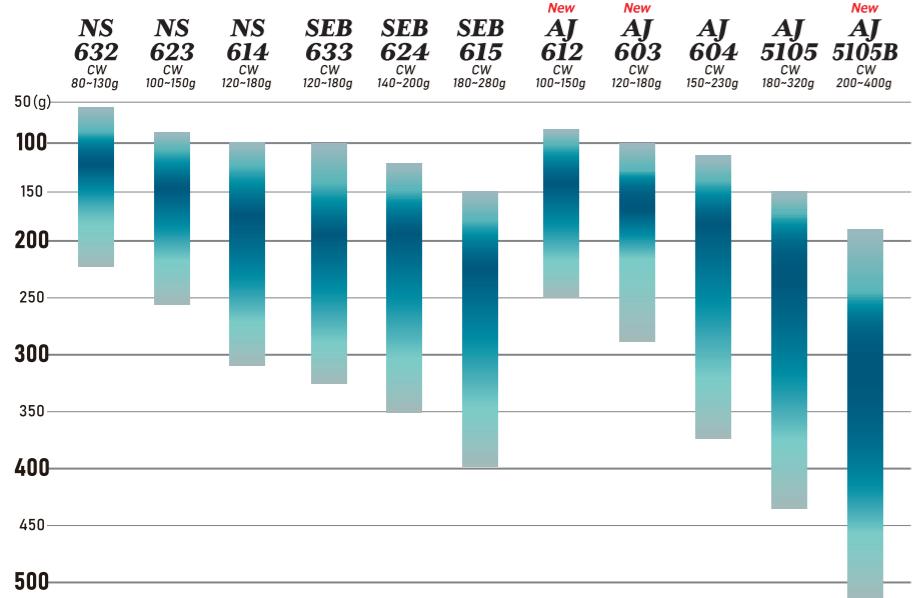

##### Specialized in vertical jigging

This series excels in patterns where fish respond well to high-appeal actions, such as the sliding motion of long jigs and high-pitch jerking. It is also specialized for situations requiring the use of heavy jigs in deep water or areas with heavy currents, such as the Kuroshio region.

### COMPATIBLE JIG WEIGHT QUICK REFERENCE TABLE

※CW=Comfort Weight

For jigging, the ideal jig weight will vary depending on the depth, shape of jig, and tidal condition, so please use this as a reference only. Since the stiffness in the AJ series is strong, anglers will be able to utilize lighter jigs when the tidal pressure is low with the minimum output of the rod action. The NS series can be used for swimming actions of lighter jigs in shallow areas with little water pressure with the belly section of the rod while the butt section will help anglers maneuver heavier jigs.

\*The comfort weight described in the SELFISH series is considered to be the most manageable weight, but actually, it is possible to use a wider variety of weights. Please refer to the graph below.

### <Explanation of Ripple Fisher's Jigging Rods>

Ripple Fisher's jigging category comprises three distinct series: the Selfish, the Ocean Arrow, and the newly added Agile. Each series is engineered with unique characteristics and actions, tailored to specific fishing styles and purposes. This page provides a detailed explanation of the features and actions of each series to assist you in selecting the rod that best suits your needs.

## Ocean Arrow AGILE

Agile was created to enjoy the subdivided game of light jigging in a Ripple Fisher-like way. Even if it is called light jigging collectively, it is not easy to cover all of them due to the types of lures and regional characteristics. What we wanted from Agile was to use application rather than expertise, and not to limit the degree of freedom of the angler. Adapt to the situation with a wide variety of lures and enjoy the wide and deep world of light jigging.

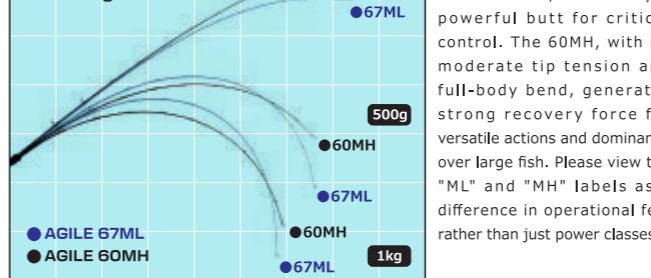

### AGILE 67ML

Specially designed for reeling-focused light jigging strategies. This model is ideal for using Tai-rubber and Tungsten jigs in deep waters (exceeding 100-150m) or strong currents. The sensitive yet highly flexible tip-to-belly section detects subtle changes, allowing fish to bite without feeling unnatural resistance. Despite its pliability, the butt section retains a solid core, providing the power to firmly control and lift unexpected large fish.

### AGILE 60MH

A high-response, regular taper model that excels in slow jigging and the intricate manipulation of semi-long jigs. The uniform tension from tip to butt allows for direct, manual-style control over a diverse range of actions—from high-pitch to slow—and accommodates a wide spectrum of jig weights. During the fight, the entire rod bends smoothly, allowing anglers to enjoy thrilling battles with large fish.

### AGILE SERIES Bending Curve

The 67ML features a sensitive tip that loads smoothly to detect bites, backed by a powerful butt for critical control. The 60MH, with its moderate tip tension and full-body bend, generates strong recovery force for versatile actions and dominance over large fish. Please view the "ML" and "MH" labels as a difference in operational feel rather than just power classes.

### METHOD COMPATIBILITY CHART

	Deep Tairubber	Inchiku Soft Plastic	Hairtail Jigging	Light Jigging	Slow Jigging	High pitch Jigging
67ML	○	○	○	○	○	△
60MH	△	○	○	○	○	○

The Ocean Arrow series is engineered with the essential power and strength required for serious battles against large predators. The lineup consists of three distinct categories:

BFT: "fight-focused" design prioritizing the angler's comfort and stability during the battle.

DTT: "high-power" specification built to forcibly stop fish from diving into structures.

AMJ: "multi-purpose" model designed to achieve a balance between ample torque and a light, agile operational feel.

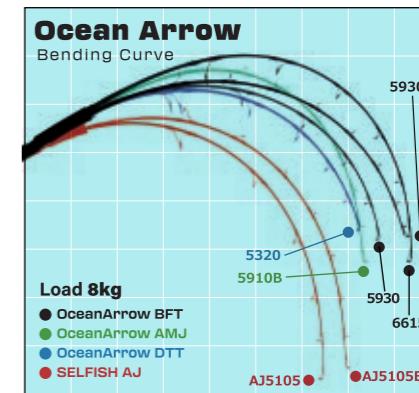

Note: These category names (BFT, DTT, AMJ) are not printed on the rod blanks themselves.

**BFT**  
BLUEFIN TUNA  
Fight Focused

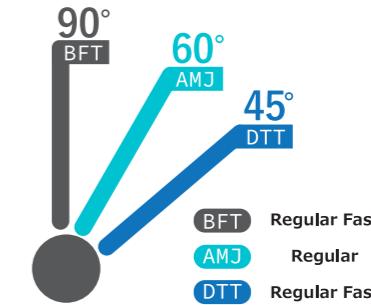

**AMJ**  
AMBERJACK  
Multi Purpose

**DTT**  
DOGTOOTH TUNA  
High Power

This is a comparison of the Ocean Arrow series with a static load of 8kg. Although the 5930 and 5930B have the same blank, due to the different reel seat and guide positions, you can see a significant difference in the bending curve. The 5320 is the stiffest of the series with the bending point being closest to the angler, ideal for highly strenuous high pitch jerking. We have included the Selfish AJ for reference. You can see the Selfish series has been designed to bend from the grip with heavy load. If you seek power, we recommend the Ocean Arrow, and the Selfish series for operability.

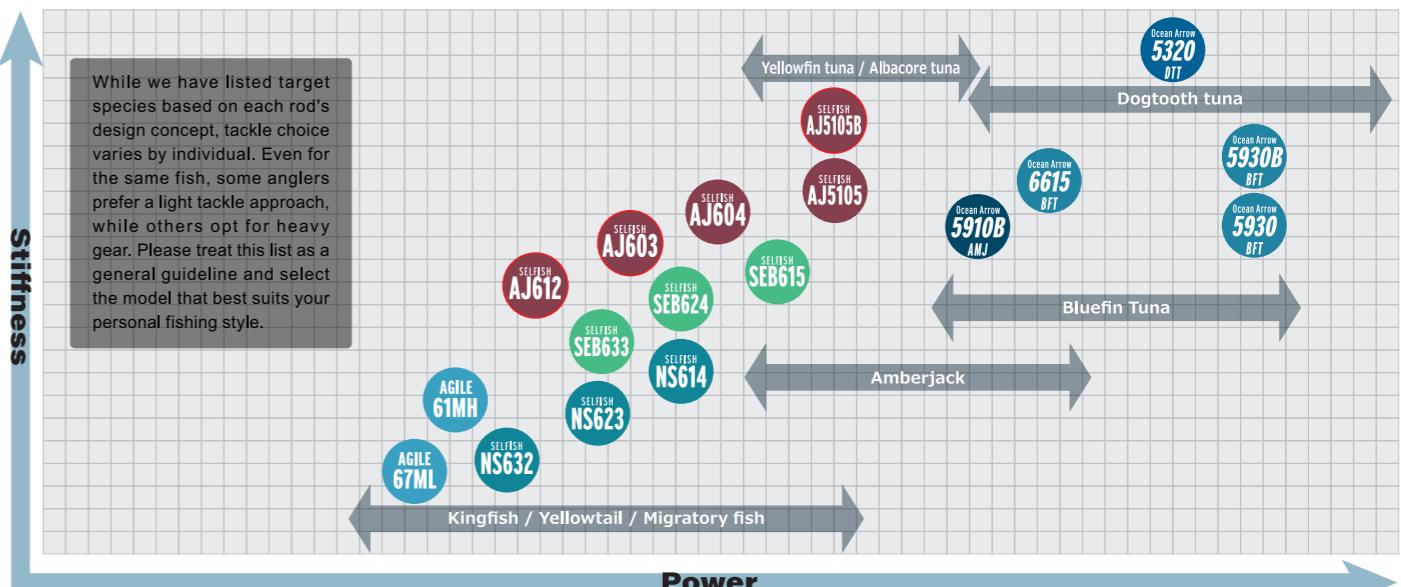

### RECOMMENDED ANGLES FOR EACH ROD

When the fish is far away and the line is slanted, depending on the stiffness and tenacity of the rod series, it is possible to hold the rod up to the angle shown in the diagram above and apply pressure to the fish. If the fish is close to under the boat, please try not to set the rod too high. If you do so while the fish turning under the boat, a huge load will be applied to the blanks and it may cause of breakage. Please do not keep the rod too high angle, especially when landing, so control the fish by holding the rear grip under the arm.

# SELFISH

When it comes to jigging, casting distance is not an issue. It is generally the elevation or sinking of your jig that attract the fish and you can vary your jerking or alternate the speed of your jig. Jigging is so simply yet profound.

It is interesting as your fishing results vary greatly depending on your technique and the high reproducibility of your results.

How can you set yourself apart from your fellow anglers on board? It's a good idea to look for patterns and try different methods and techniques. By feeling the invisible changes in the sea and interpreting them, you can add action to the jig, and lure the fish. This is the real challenge and fun of jigging.

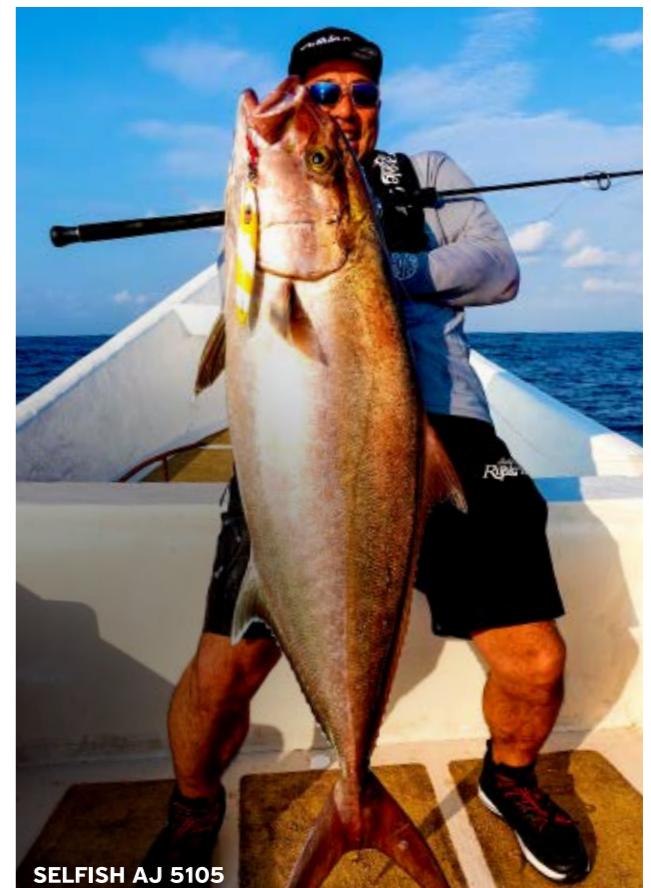

Ripple Fisher's jigging rod series "Selfish" is a series that places emphasis on fully enjoying jigging and the process of catching fish. This rod series can be used easily all day, with excellent operability and sensitivity. After the fish is hooked, the slender yet highly resilient blank bends as a whole, lifting the fish quickly while suppressing the fish's thrust.

In 2026, we will be adding three new models to the AJ series, creating a lineup that can handle a wider variety of patterns and changing conditions.

"AJ - Aggressive Jerk" is a series characterized by outstanding response and able to perform dynamic lure control with high sensitivity that allows anglers to detect changes in the current and water pressure.

"NS - Natural Swim" is a series that specializes in high controllability of jigs when the boat is drifting naturally (line on a diagonal angle), allowing the jig to move naturally even in shallow waters or when the current is slow.

A highly maneuverable series that allows for a versatile action of jigs unique to baitcasting tackle, from short/high-pitch jerks to slow styles that induce the bite with the sinking of the jig. "Feel, control and hookup." The Selfish series continues to refine every aspect of jigging, evolving to meet the passion of anglers who continue to explore the unknown.

# SELFISH AJ / Aggressive Jerk

The Aggressive Jerk series excels at high speed and sliding action jigs. These specialized models allow the angler to tirelessly do vertical jigging without losing the sensitivity even in deep waters or areas with fast flowing currents.

## 2026 NEW SELFISH AJ 612

The AJ612, along with the NS632, are two of the Selfish series' most sensitive models, offering even sharper controllability and improved responsiveness. Optimized for jigs up to 150g, the AJ612 offers quick and unrestricted maneuverability. The highly repulsive blank will allow anglers to cut through the water with the fine line and maneuver the jigs at high speed. The series' highest level of sensitivity, picking up on even the slightest changes in the upper and lower currents like an antenna, makes it unbeatable for efficiently identifying the bite zones. In addition, the robust double footed guides will ensure you have control during the sudden encounters with monstrous fish. By fusing exceptional sensitivity for reading current conditions, superior operability, and uncompromising strength, the AJ612 opens new possibilities for local water jigging.

## 2026 NEW SELFISH AJ 603

The AJ603 builds on the crisp, responsive handling of the AJ612 and has been specifically refined for using jig weights of around 180g which are the generally the main weight for your local waters. Its strong, resilient backbone delivers powerful repulsion, allowing anglers to widely slide their jigs and also conduct high-speed jerks. Even in high-pressure areas where there are many anglers, or during low-activity periods when the flow of the current slows right down and fish are reluctant to bite, the rods explosive initial response delivers crisp action, proving highly effective in triggering strikes from wary fish. The AJ603 best embodies the sharp action and refined sensitivity unique to the Selfish series, while also being equipped with the sturdy double-foot guides. As the standard for your local waters, this new model will serve as a new foundation for anglers, capable of not only vertical jigging but also natural drifting of the boat in shallow areas with the jig and line on a diagonal angle.

## 2026 NEW SELFISH AJ 5105B

The AJ5105B truly excels in demanding situations where spinning tackle places excessive load on the angler—such as deep jigging over 150 meters in fast-flowing current in southern Japan, or targeting large amberjack on exotic overseas expeditions. Its exceptionally strong blank minimizes power loss even during high-pitch jerks under heavy load in deep water, maintaining a consistent rhythm and delivering sharp, decisive action to draw out trophy-class fish. The reeling strength unique to baitcasting tackle allows you to easily maneuver jigs weighing around 400g, minimizing fatigue even during extended fishing trips and allowing anglers to maintain a stable pitch. This rod boasts overwhelming butt power, allowing you to quickly lift the fish away from structures and maintain full control during the tough fight against the monstrous fish from depths of over 200 meters. Deep-sea jigging becomes more agile and efficient. This is Ripple Fisher's ultimate model, honed for fast-flowing currents, deep jigging, to target your trophy fish. (Same blank as the AJ 5105.)

## SELFISH AJ 604

This model allows you to take advantage of the rod's repulsion and high action response without exerting unnecessary force. This is especially helpful in areas with fast flowing currents. It is also able to bring about reaction bites from super high speed jerking with your spinning setup or pinpoint jigging on top of manmade fishing reefs and physically stopping them from busting you off.

## SELFISH AJ 5105

This is a high-resilience model specialized for vertical jigging in areas with fast flowing currents at depths of 100m or more. While it is a highly powerful rod, it also retains the light maneuverability of the SELFISH series and high sensitivity to gauge the tidal pressure. Even when aiming pinpoint on rough terrain or around manmade fishing reefs, the short length rod allows for a quick response while boasting outstanding butt power for hooking fish in deep areas. Anglers will be able to comfortably fight massive species and areas where there are plentiful sharks.

## SELFISH AJ 604

SELFISH SEB 624

## SELFISH SEB / Sensitive Bait

These are highly responsive overhead reel models able to easily maneuver jigs simply or technically with various jerking methods. Anglers will be able to easily vary the tempo and speed of jerks capitalizing on the advantages of the overhead reel tackle set up.

## SELFISH SEB 633

The standard model of the SELFISH Overhead reel series - built up with controllability and sensitivity as the foundation - is equipped with the ability to handle various jerking patterns vital for overhead reel setups and blank settings which support the angler when reeling up a heavy load. By eliminating the wobbling of the blank after the jerk and giving it moderate stiffness, the rod responds well in high-pitch or combination jerks. In addition, anglers are also able to utilize slow tempo jerks which focus on the falling of the jig to induce the bite. Once the blank is loaded, the rods bends over nicely and the resilience will allow the angler to take initiative. This versatile rod is the standard model of the series ideal for vertical or diagonal jigging in your local waters or exotic fishing trips.

## SELFISH SEB 624

With the basic characteristics of the SEB633, we have set the bending point farther towards the tip and sharpened its manual maneuverability. The strength of the blank is capable of sharply maneuvering jigs up to 220g. This model is built with highly sensitive characteristics and to easily control the jigs and induce a bite when the angler can feel for a fish in pursuit, change in the layer of current or a subtle bite. The reinforced butt power will control the massive thrashing of the fish running towards artificial fish reefs and rough rock formations while the powerful resilience and reeling by the angler will crank up 10kg class Kingfish.

## SELFISH SEB 615

It is a bait model that supports a wide range of methods, such as pinpoint targeting in the fast flowing currents and deep waters, as well as loose action involving fine pitch adjustment unique to bait-casting reels. At depths of 100 m or more, the belly to butt section of the rod can be used as a fulcrum to bring out the high repulsive force of the blank allowing for a more lively action of your jig. Despite having a slender blank, it has enough butt power to control the intense running of the fish during the fight.

### About Comfort Weight

When inputting action to a jig, the load on the rod will vary depending on the jig weight, water depth, and the speed of the tide. Therefore, for SELFISH, we have indicated a range of jig weights that will not impair action input under any circumstances. Since this is not the maximum weight of jigs, slight fluctuations in the lower and upper limits are not a problem. Please judge the day's conditions such as wind and tide, then pick the appropriate jig weight.

# SELFISH NS / Natural Swim

A series especially designed to naturally maneuver the jig by eliminating any unnecessary flicking and jumping of the jig. The versatile multi purpose models are able to induce bites in selective situations, various sea conditions and areas.

## SELFISH NS 632

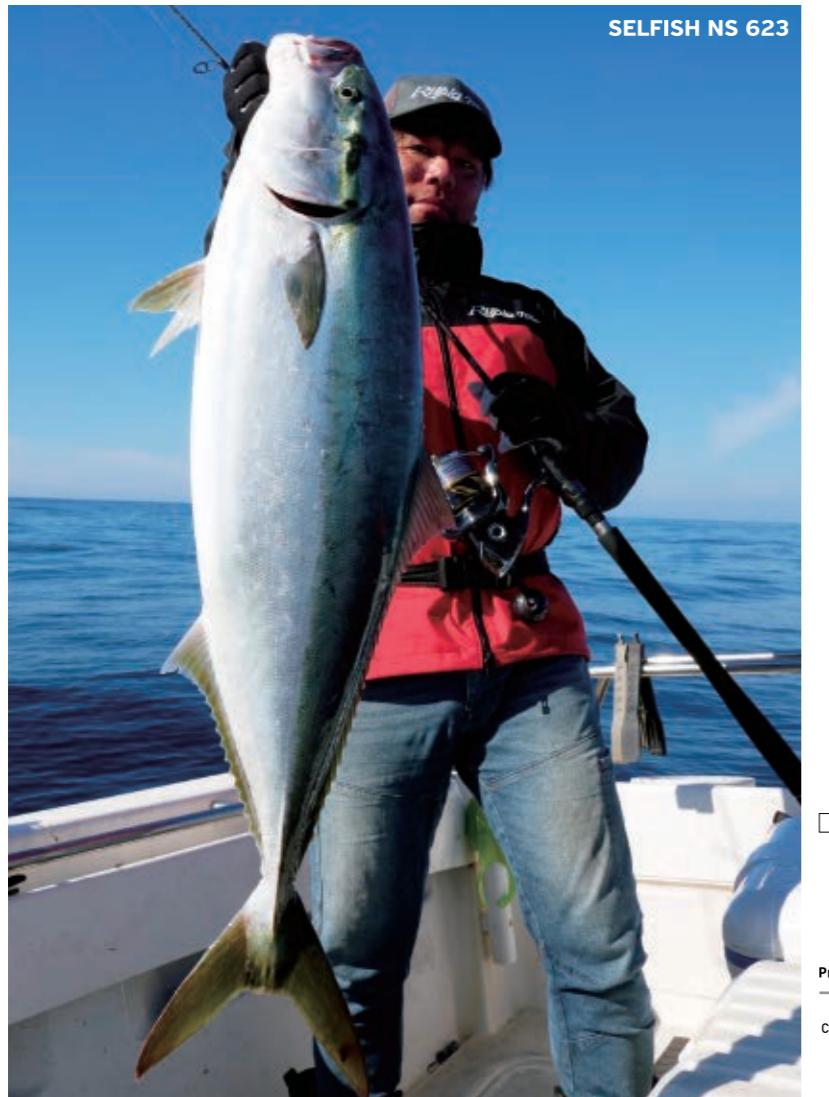

This is a technical model for anglers to utilize small jigs weighing between 80g~130g with PE#2 for those spooked targets or high pressure fields. The light maneuverability and its honed sensitivity will transmit the signal for the bite and allow the angler to efficiently control the jig. Although it is equipped with a quick handling feel, the blank is designed to bend a little when jerking the jig reducing unwanted bouncing and the loss of tension, allowing for a natural action of your jig. Even with the PE#2 class specs, the rod possesses ample butt power not only for local waters but also for trips targeting larger species. The natural action of your lure induced by the light class rod is an ideal selection for the Kingfish suspending in the mid range during the high pressure spring seasons.

## SELFISH NS 623

This is a model developed with the focus on its ability to intrigue your target by the natural action of the jig. It is designed to reduce your jig from bouncing about to perform a more natural appeal. While retaining the manual operational feel, anglers will be able to maintain the balance of the jig during its swimming action vital for inducing the bite. The responsive blank will allow anglers to easily switch the jerking pattern from the swimming type jerks using the tip section to those sliding type jerks which use the rebounding of the belly section. You could say that this would be your multi purpose model for local waters, able to smoothly adjust to tough field conditions. The butt section is tenacious and will allow anglers to go head to head with 10kg+ yellowtails (Buri) or 7-8kg Kingfish.

## SELFISH NS 614

The NS614 is a technical model designed for fishing in shallow waters between 20~40m in depth, targeting the selective adult kingfish. It is a highly sensitive model, with a flexible tip section while having a stiff belly section to feel for the action of the jig in the water. Anglers will be able to slide and control the jig by efficiently responding to the ever changing sea conditions, and control the thrashing of the monstrous kingfish with the grip-end under your armpits. It is also suitable to under-cast your lure to search a wider area and will respond quickly to those situations where the current is flowing towards you. This piece possesses numerous traits required for jigging in shallow waters.

# AGILE

## AGILE / Light Jigging Game **67ML** **60MH**

The targets in the light jigging category are extremely diverse, and the lures, jigs, and methods required to target each of these species are also diverse, making it a complicated genre that varies depending on the area and season. New styles continue to emerge in various regions around the world, and the sport is expanding even further, going beyond the boundaries of an already fragmented game. The light jigging game we envision at Ripple Fisher is not simply the boat game using a lightweight jig with light line. It is however the operability of the rod to instantaneously decipher the situation unfolding before you, set your target with a clear vision, and select appropriate size jigs for your target. Whatever the situation, we have pursued for absolute sensitivity that allows anglers to feel for the presence of fish chasing your lure at the other end of the line, without limiting the anglers imagination and originality of choosing their lures. This can only be made possible by the finesse approach utilizing light line. The blank design further sharpens the rod's sensitivity and strength, which are necessary for catching targets lurking in the deep, bringing a more strategic approach to the world of vertical boat games. This rod was produced to unleash infinite possibilities of light jigging for anglers around the world. That is the new style we offer at Ripple Fisher and the background for the development of the Ocean Arrow Agile series.

### AGILE 67ML

The 67ML is a model that excels at precision approaches using tungsten jigs or Tai-rubbers rigs in deep areas over 100-150m deep with fast flowing currents to target fish eaters that feed on micro baits. The highly sensitive and flexible tip to belly section accurately detects and transmits through the blank the subtle changes in the currents, allowing for precise jig control and a seamless hook-up. The 67ML is flexible yet powerful, successfully deflecting the powerful run of the fish while the stiff butt section provides control and ample lift to surface the fish. This is a technical model that is ideal for use with Tai-rubber rigs and tungsten jigs, but also allows anglers to utilize Inchiku and soft-plastics depending on the rapidly changing conditions of the sea.

### AGILE 60MH

Designed with a regular taper, the 60MH features a highly-responsive blank with consistent stiffness from the tip to the butt section, allowing anglers to easily control various jig actions from high-pitch long jig actions to the slower and falling actions of shorter jigs. The sharp blank excels at delicate action and is compatible with a wide range of jig weights. Depending on how you use it, it offers great versatility and can flexibly adapt to any situation. While the blank is designed to induce the bites, the deep bend of the blank that maximizes the strength of light line will allow anglers to enjoy the thrilling battle against their monstrous targets. The 60MH is a rod that is specialized for light jigging in coastal waters targeting selective Blue runners, and can also be used as your spare tackle for more exotic expeditions. It is a light model that really shows its true qualities when utilizing a well-balanced light line setup.

# OceanArrow

## OceanArrow / Jigging for Monster

Tuna / Marlin / Amberjack / Grouper

The Ocean Arrow series is a lineup of jigging rods developed specifically for targeting monster fish around the globe. While technical presentation to induce a bite is paramount in jigging, when facing off-the-charts giants, that alone is not enough. To successfully land these fish, the rod must possess the performance to endure the fight to the very end and the power to reliably lift the fish to the surface. The Ocean Arrow series has been refined into three distinct categories, with each model optimized to meet the specific demands of its target. The "BFT" is designed to go toe-to-toe with endurance fighters like Bluefin Tuna. It combines tenacity with strength, allowing anglers to fight comfortably and sustain pressure during prolonged battles. In contrast, the "DTT" prioritizes stiffness and raw power, essential for stopping powerful fighters like Dogtooth Tuna that attempt to dive into the reef. The "AMJ" is a Medium-Heavy class model finished with a focus on manageability. It features a reliable backbone (butt power) capable of handling Amberjack and large bottom fish with confidence.

### OceanArrow BFT / Bluefin Tuna

Specializing in tuna that allows you to keep the rod high angle during fights and easily endure long fights.

Target : Tuna / Billfish Category : Heavy Class

### OceanArrow 6615

This is a two piece grip jointed spinning model designed to jig for large Tuna. Similar to the 5930, it is designed so anglers can high-stick the rod and the longer rod length is set to avoid the line from scraping the hull of the boat resulting in a break-off. Although it is a PE6 class high powered jigging rod, the light feel of the rod will allow anglers to utilize various jerking patterns to induce that bite. The 6615 is a rod that will be useful in various locations around the world and for various species with power to control the thrashing fish, tenacity to continue to apply pressure on the fish and highly well balanced to maneuver the jigs. Recommended size of tuna: More than 50 kg

### OceanArrow 5930

This is a one piece spinning model designed to jig for large size Tuna and Marlines around the world. The short length rod able to be high stuck will be advantageous for the angler at critical times when the fish is directly beneath the boat. The beautiful bending curve of the one piece blank allows anglers to maintain the high stick position which will continuously apply high pressure on the fish while reducing the load on the angler side. It is ideal for slow pitch jerk, one pitch jerk and other jerking patterns focusing on the sinking action of the heavy weight jigs. Anglers can also utilize the fighting belt to jerk or set the grip end under your armpits. Recommended size of tuna: More than 50 kg

### OceanArrow 5930B

This is a one-piece bait model for targeting tuna. The blank is the same as the 5930 spinning, and the stiffness has increased by making it a bait casting model. This model features a regular tapered action, which is suitable not only for vertical jigging, but also for live bait fishing and trolling. Even when jigging in strong currents or deep trenches, anglers will be able to comfortably utilize long jigs of 200 ~ 800g.

Recommended size of tuna: More than 50 kg

### OceanArrow AMJ / Amberjack

A highly versatility that can be used for amberjack, yellowfin tuna, and large grouper. Target : Amberjack, Large groupers, etc. Category : Medium Heavy Class

### OceanArrow 5910B

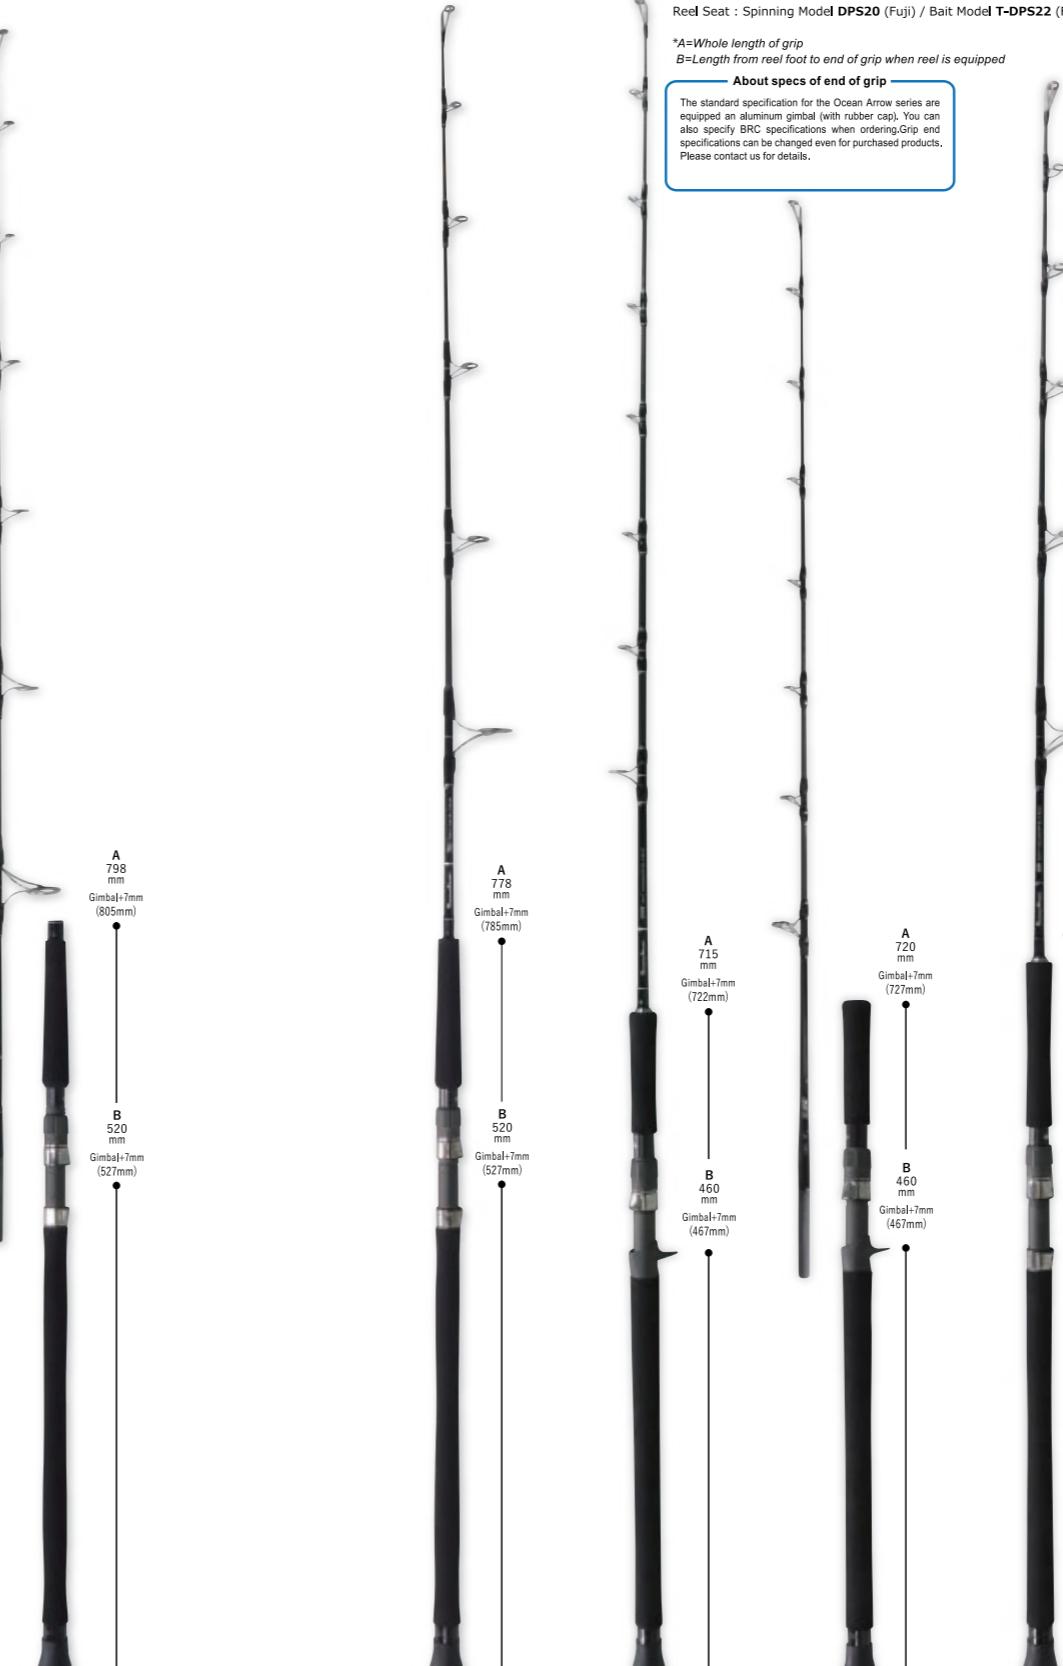

This is a grip-jointed two-piece bait-casting model designed for various species such as amberjack and grouper. It is highly portable and allows anglers to swiftly jerk their jigs in fast flowing currents of exotic fishing destinations. It is also equipped with outstanding butt power to stop the fish from running you off on the rocks.

### OceanArrow DTT / Dogtooth Tuna

A category aiming for monsters with outstanding blank rigidity and lift speed. Target : Dogtooth Tuna Category : Heavy Class

### OceanArrow 5320

It is a regular fast-taper action model designed to target monster-sized dogtooth tuna. This rod has strong overall stiffness and a very high action response thanks to its short length, making it possible to operate heavy jigs lightly even in strong currents. It is equipped with ample butt power to forcibly stop fish that run towards the rocks during a fight. We recommend anglers to put their weight behind the rod during the fight to maximize its potential.

# MORE ABOUT BOAT CASTING MODELS

## Aquila

### ST

#### STANDARD

Developed to target a wide range of species with excellent balance and high versatility. This series is an all-rounder adaptable to any situation or lure, yet it is designed with a specific focus on maintaining a sharp and crisp operational feel.

### MST

#### MONSTER

Developed to conquer scenarios where fish are preying on large bait, such as Dorado and Needlefish, requiring the use of large plugs. The tenacious blank is designed to bend deeply and hold power, enabling stable fights against large predators.

### OceanRidge

## BIG TUNA

### BIG TUNA FIGHT STYLE

#### Slow Fight

Use a rod that will bend deeply. Hold the rod upright and use the blank's bending force to slowly bring the fish to the surface. Recommended for those with less body weight or physical strength.

#### Speedy Fight

For those who are confident in physical strength or who have sufficient body weight, it is recommended to use a stiffer rod which will have a shallower bend for a speedier fight.

Light Class ~PE6	BIG TUNA 85F
Middle Class ~PE8	BIG TUNA 87AS
Heavy Class ~PE12	BIG TUNA 83
Power Class ~PE12	BIG TUNA 86

Power Class ~PE12	BIG TUNA 76	BIG TUNA 73	BIG TUNA 70
----------------------	-------------	-------------	-------------

### MLT

#### MULTIPURPOSE

Designed for conquering micro-bait patterns, such as whitebait, using small pencil baits. This model features a tip section specialized for the delicate manipulation of small plugs, combined with flexible belly and butt sections that allow you to maximize the strength of light lines.

### EX

#### EXPEDITION

An expedition model that fuses the portability of a 3-piece design with uncompromising rod performance. It features a sharp operational feel and a seamless bend that eliminates any sensation of the joints.

We recommend using different rods according to the bait pattern and target size of the BIG TUNA series, but here we will explain how to choose a rod that suits your strength and how to position yourself to maximize the blank's performance.

\*For detailed characteristics of each model, please see the BIG TUNA page.

◀ The 85F and 87AS have a deep bending margin and are classified as slow fight rods in the series. As these rods absorb the load, they are recommended for those who are not confident in their physical strength or who are light in body weight.

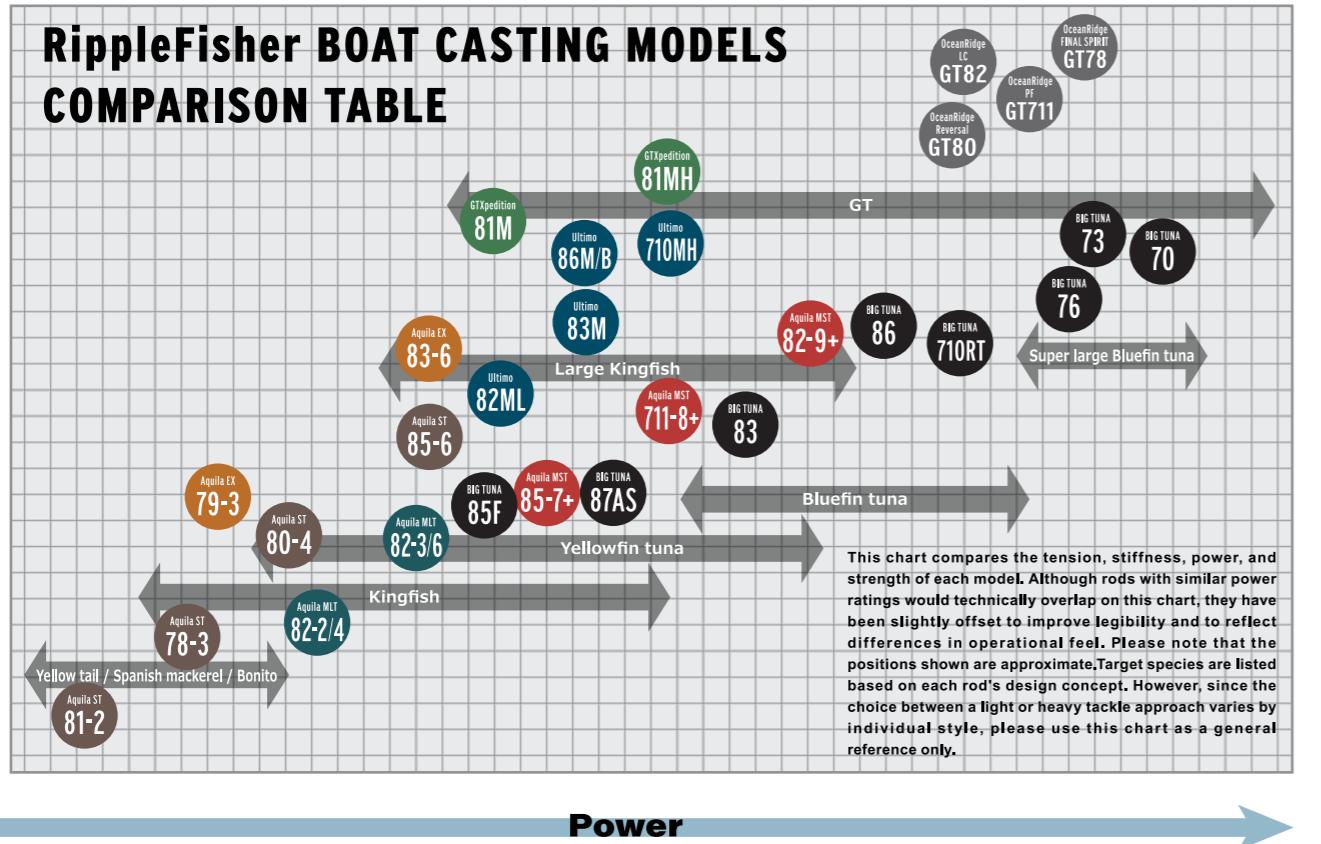

◀ The 83, 86, 710RT, and 76 are middle-class models. They are easy to use for people with a certain level of build and physical strength.

◀ The 73 and 70 are classified as speedy fight rods because they bend relatively little. When used by heavy or physically fit anglers, they achieve speedy results.

\*Depending on the size of your fish, it may not suit the rods repulsive force. Please select a model most suitable for your target size.

## RippleFisher BOAT CASTING MODELS COMPARISON TABLE

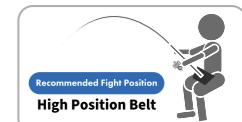

### <Explanation of Ripple Fisher's Boat Casting Rods>

Ripple Fisher's boatcasting category consists of a total of five categories: Big Tuna, Aquila, Ultimo, Ocean Ridge and GTX. Each series has its own characteristics, and is used for different purposes. This page explains in detail the characteristics and condition of each series for your reference.

## Ultimo

This is Ripple Fisher's signature casting series, achieving a high-level fusion of the overwhelming casting distance essential for the casting game, and a lifting power that defies its light and agile operational feel. Designed to target GT and large Kingfish using diving pencils and diving poppers, these rods feature a flexible tip. This design ensures the lure grips the water effectively and offers the high versatility needed to handle a wide variety of lure types. The lineup consists of four models focused on speedy game progression, enabling anglers to leverage their full body weight during the fight.

### LURE COMPATIBILITY TABLE

LARGE MOUTH POPPER	MEDIUM MOUTH POPPER	SMALL MOUTH POPPER	DIVING POPPER	DIVING PENCIL	SINKING PENCIL

## OceanVoyager GTXpedition

While it has been designed with a short storage size of 887mm for your exotic adventures to the remote parts of the world, its castability and fighting performance is comparable to that of a 2-piece model. This multi-piece series is the crown jewel of Ripple Fisher's technical capabilities.

The size of fishing rods that can be checked in varies depending on the airline and aircraft. We recommend that you check with the airline in advance.

## OceanRidge

This series is specialized for GT games, and features overwhelmingly high repulsive blank compared to others. The butt section has outstanding power to fight against GT for a short and efficient fight, so we have set a recommended angler weight.

	Characteristics	Target Fish / Expected Situations
R80 ~PE8 Wt: 65kg~	The most versatile of the series Strong stiffness and lifting power, yet easy to load the weight of the fish Ideal as your first rod in the OR series	For spooked fish that require delicate approach with smaller 100g lures For anglers who frequently use with diving pencils and poppers
LC82 ~PE8 Wt: 70kg~	Specialized for long distance casting High pivot point for sharp casting feel and maneuverability High tenacity for excellent lure control and lifting power	Great long distance casting ability for areas boats cannot access or approach Situations where you are forced to cast against the wind
PF711 ~PE10 Wt: 70kg~	Short length and easy to bend Able to lightly perform long jerks with bubble-biting lures over 150g Suitable for well built and heavy anglers	Great for fishing in deep water areas using sinking lures Or for short, efficient fights in shallow and fast flowing areas For anglers targeting species larger than 40kg
FS78 ~PE12 Wt: 80kg~	The strongest lifting power and strength of the GT series The strongest stiffness makes it easy to operate large-mouthed poppers Suitable for well built, heavy or expert anglers	For the toughest GT areas such as ultra-shallow areas (<10m depth) and ultra-strong currents. Situations where anglers are required diving pencils over 300mm or large mouthed poppers.

### LURE COMPATIBILITY TABLE

○	○	△	△	○	○

## RIPPLE FISHER CASTING ROD ~FIGHT STYLE~

BIG TUNA JAPAN SP Tuna Rod Series	
● Low Position (Gimbal belt recommended)	
● Upright Fight Style (Holding the rod high)	
● Stance: Do not spread feet too wide; do not drop hips too low.	

For tuna that spiral upward from the depths over a long period, holding the rod high brings the bend's fulcrum closer to the angler, allowing the load to be shifted downward (toward the belt). This design is intended to reduce the physical burden on the angler. Additionally, compared to GT and Kingfish rods, the blank is designed with suppressed rebound (recoil), making it suitable for enduring long fights without exhaustion.

Aquila/Ultimo/GTX/OceanRidge GT & Kingfish Rod Series	
● High Position (Gimbal belt recommended)	
● Maintain a rod angle of approx. 45°, being conscious of the line angle.	
● Stance: Take a wide stance, drop your hips, and focus on engaging the rod butt.	

For fish that run toward structures (such as GT and Kingfish), letting out line can lead to break-offs, so it is necessary to stop the fish and lift them quickly. Therefore, the design prioritizes the use of the rod's butt section. While this posture allows you to utilize the rod's power to its maximum, the leverage effect makes it easier for the angler's body to be lifted (pulled forward) by the fish. For this reason, a "Recommended Angler Weight" is set for GT rods.

Ripple Fisher rods are designed to unleash their maximum power when bent at the proper angle. By correctly drawing out the specific characteristics of each series, you can enjoy Big Game fishing more comfortably and deeply. We are committed to "specialized design" to ensure that our rods serve as the one reliable tool that responds with certainty in those critical, make-or-break moments.

# Ultimo

## Ultimo / Boat Casting Giant trevally / Kingfish

The Ultimo series are the lightest in weight, highly well balanced, possess a light casting feel and armed with outstanding butt power to win over the massive fish. We focused on its casting ability as the most important aspect which is obviously the key factor when venturing out for a casting game. The choice of carbon material and guide settings were vital and the light yet highly resilient blank possess the power suited for the needs of the recent evolution in the off-shore fishing scene.

These four models are the flagship in Ripple Fisher's boat casting rod series. Our mission was to create rods which are lighter, cast farther, are stronger and most efficient when going head-to-head with monstrous species.

### Ultimo 82ML Spinning Model

This model is ideal for top water GT and Kingfish game for anglers to utilize diving pencils, as it is equipped with a sensitive flexible tip to reduce handling error of the lure and stiff blank characteristics seen in ML class rods. The blanks followability is extremely high as it will easily bend in as soon as the raging large fish starts running and it is designed to bring out its true strength of the butt with little strain on the angler. The lifting ability of the butt section of the rod will outperform its line-class specifications in highly rugged dangerous areas. Thanks to the medium light class blank design, the light casting feel and highly well balanced rod will assist anglers in the highly strenuous big casting game.

### Ultimo 83M Spinning Model

This will be your standard model with a total balance of casting feel, controllability and fighting performance factors required to target GT and Kingfish. Anglers will easily be able to sharply cast out diving pencils and poppers around 240mm while lightly and effectively maneuvering the lure through the manually handling blank. Once the rod is loaded with the weight of the fish, it will bend nicely and allow anglers to put their weight behind the rod to efficiently lift the fish with the responsive strength of the blank. It is ideal for not only GT but also great for aggressively fighting the large kingfish in shallow areas.

### Ultimo 710MH Spinning Model

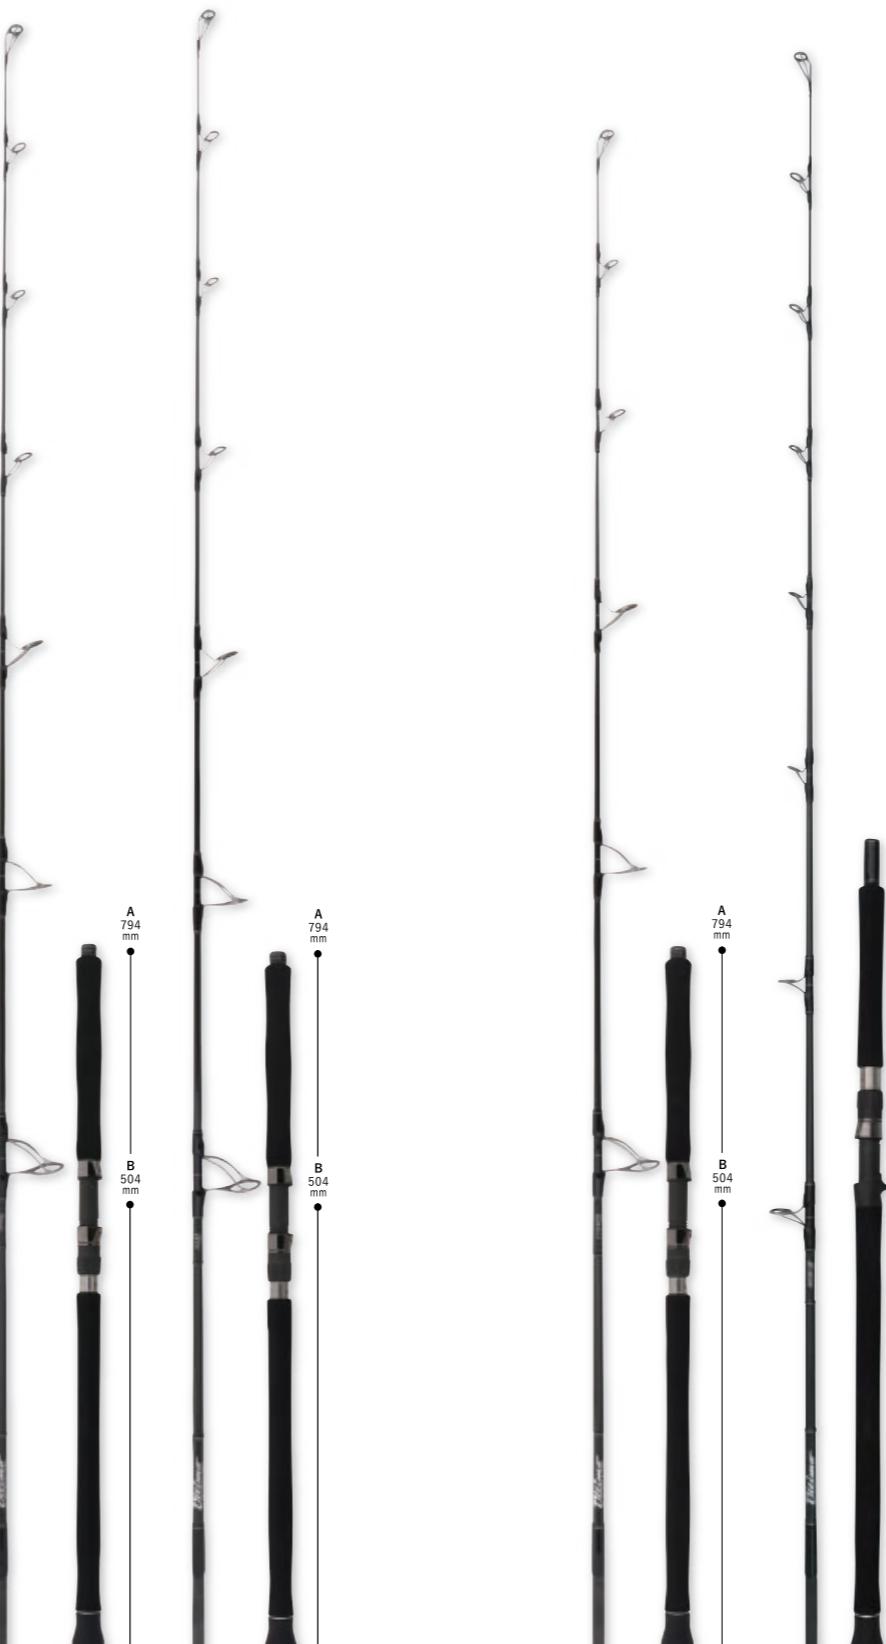

The sharp and stiff blank will allow anglers to easily handle large diving pencils, jerk up sinking pencils from the depths and efficiently and lightly produce splashes with medium mouthed poppers around 260mm in difficult conditions where the use of a variety of lures is required. The short length light feeling 7.10ft rod is well suited for casting from the stern of large fishing charter boats where there is little space to swing your rod around. The torque of the outstanding butt power will smoothly intensify with the weight transition of the angler enabling you to stop the massive fish and take initiative of the fight. It is a new generation power rod with contradicting characteristics of lightness and medium heavy power class which can easily be utilized by anglers with a smaller build.

### Ultimo 86M/B Overhead reel Model

The highly resilient blank was especially designed to cast farther, control and maneuver the rod and easily fight your target with ease. We were also very particular about the length of the rear-grip for smoother casting and the front-grip is assembled with a rubber grip to reduce any slippage. This has helped anglers properly grip the front-grip during the fight and prevent the reel from tilting downwards. The guides are large in diameter to help release the thick and long leader system with ease. With the many advantages as a bait-casting tackle, anglers will be able to consistently cast with ease and capitalize on the strong winding power of the reel. The model will open up new opportunities for anglers around the world and will not only be ideal for experts but also for beginner fishermen.

Ultimo 710MH

Ultimo 83M

# OceanRidge

## OceanRidge / GT Boat Casting

### Giant Trevally

The OceanRidge series are GT rods especially designed with Ripple Fishers' brand characteristics. The lineup built up for the needs of the expert anglers require manual maneuvering and will bring out the true skills in anglers. These are not your ordinary lineup and will not suit all anglers. But rest assure that these rods will feel like a part of your body once anglers have established their style and skill. The GT game is becoming tougher and tougher each year and sometimes require the use of supersize lures to induce a bite. Ocean Ridge series including the strongest GT78 is not simply an over powered rod but will become your biggest asset in specific situations and against monstrous GTs.

### OceanRidge Reversal GT 80 Nano

This is a model where anglers will be able to experience and feel for the distinct difference in the Nano blank. It is lighter, stronger and more sensitive while having an astounding ability to cast long distances. Anglers will be able to utilize pencil type lures and small/medium mouthed poppers to land those massive GT. The blank has a smooth bend curve with increasing torque as more load is applied on the rod. It is an ideal rod for those who have never experienced our OceanRidge series or those lighter weighing anglers (approx.60kg) who have the skill to smoothly transfer their body weight on the rod during the fight.

Angler's Weight : 65kg~ (Recommendation)

### OceanRidge LC GT 82 Nano

For those who want to cast farther than any other angler on the boat. This is an ideal rod for use when long casting is required or casting against head winds. It is suited for use with poppers and diving pencil type lures. The Nano material has not only increased its controllability but anglers will also be able to sense the slightest changes in current movement through the blank, line and lure while efficiently and effectively surface the GT. Although it is a long casting model, you will be pleasantly surprised with its lightness and controllability. Angler's Weight : 70kg~ (Recommendation)

### OceanRidge PF GT 711 Nano

Although this stiff and super sensitive rod may be limited for use by experts, its true potential will be exhibited once anglers with vast knowledge and skills take hold of it. The NANOALLOY® technology developed by Toray has sharpened the blanks capabilities allowing anglers to decipher the subtle changes in current and control the lure at the anglers will. The PowerFight 711 has remarkable lifting power and will surface GT exceeding 50kg simply by loading up the rod and using its repulsive force.

Angler's Weight : 70kg~ (Recommendation)

### OceanRidge FINAL SPIRIT GT 78

This is the most powerful and toughest GT rod Ripple Fisher has ever developed with stiff characteristics in the tip to belly section for easy use with large mouthed poppers and outstanding lifting power in the butt. The blank is highly responsive and once hardcore anglers put his/her full weight behind it, the repulsive force in the blank will efficiently lift the fish. It is an ideal rod for short popping of large mouthed poppers and controlling massive 300mm class pencil type lures when the GTs are feeding on super large baits. It is not a rod that you want to be using all day long, but a rod that you want to bring out in hairy situations with gushing currents and rugged terrain.

Angler's Weight : 80kg~ (Recommendation)

# OceanVoyager GTExpedition

## GTExpedition / GT & Kingfish Boat Casting

Giant Trevally / Kingfish

Ripplefisher's 3 piece pack rod, "GTExpedition" model has been designed to consider the recent traveling limitations, the collapsed length has been set to 887mm for the two PE6 and PE8 class rods. These models are not only suitable for your GT fishing in exotic locations but also trips targeting massive kingfish. By combining these rods with the Aquila EX models, anglers will have a wider range to choose from depending on the sea conditions, lure size and target size. By reviewing the bending of the new GTExpedition models, we were able to perfect it as a 3 piece rod. With its lightness, outstanding balance, sharpness and appropriate bending curve, you will not believe it to be a multi piece rod. We hope you can first handedly experience the ever improving technology at Ripplefisher.

GTExpedition 81MH

### GTExpedition 81M

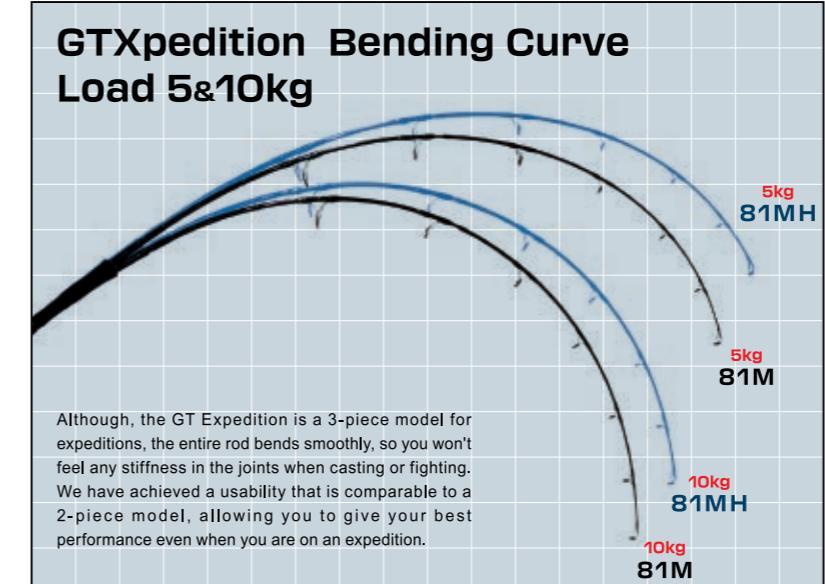

This is a PE6 class multi piece model to target GT and Kingfish domestically or internationally. It is ideal for use with diving pencils and small mouthed poppers. The seamless bending curve pleasantly surprise you as it will not feel like a 3 piece blank. Anglers will be able to cast into strong head winds with its added sharpness and the blank will assist anglers to maintain balance during the fight and efficiently lift the fish. We are proud to present you this rod with the potential to go head to head against 30~40kg class GT while being a PE6 class light and sharp rod.

Angler's Weight : 55kg~ (Recommendation)

### GTExpedition 81MH

This is a PE8 class multi piece model to target large size GT as its main target domestically or internationally. The sharp and highly resilient blank is ideal for use with large diving pencils and medium size mouthed poppers. You will be able to utilize and sharply maneuver these lures with little effort thanks to the characteristics of the blank. The sharpness of the blank will also reduce the load on the angler when casting all day long. In contrast to the 81M, this model is more muscular and has a sharper blank with instantaneous force enabling anglers to take initiative and have a speedy fight with the monstrous fish. You will be able to load the blank and stop the fish in shallow waters or around rough structures. This is the ultimate travel rod we were able to produce through challenging the limits of a multi piece rod.

Angler's Weight : 65kg~ (Recommendation)

# Aquila

## Aquila Boat Casting

Spanish mackerel / Bonito / Kingfish / Yellowtail / Yellowfin Tuna

In our lineup of Aquila are 11 models. We have categorized them into four different series, ST, MLT, MST and EX. The ST series are the most standard models, which are well balanced and fine honed to cater for various situations and various targets. The MLT series have a combination of a flexible tip section and a stiff butt section to go after massive fish with light line. The MST series are the already popular models to go after monstrous Kingfish with sheer power and strength. The EX series are 3 piece pack rods for anglers traveling around the world. The Aquila series are rods built to defy the boundaries of fishing. It was our quest to seek lifting power, easy handling of lures, outstanding castability and last but not least, the ability to parry the angry fish. We don't simply make rods with "power", we make rods with "strength".

## Aquila MST / MONSTER

The Aquila MST series have been designed for those anglers with their sights on monstrous Kingfish. The main purpose of these rods are to enable anglers to go head to head with supersize fish with the use of strong PE7~8 class line and large lures for situations when the targets are feeding on large bait fish like, dorados, needle fish, flying fish etc. These rods are not just a stiff stick with power. On the contrary, in order to deal with sudden dives of the Kingfish, they have been designed with the bending point to transfer towards the angler as more load is applied to the blank. It is a user-friendly rod for any angler to use as you can load your weight on the rod by bending your knees during the fight.

\*The + symbol next to the power class indicates that the power and tenacity has been added to the usual power class.

### Aquila MST 85-7+

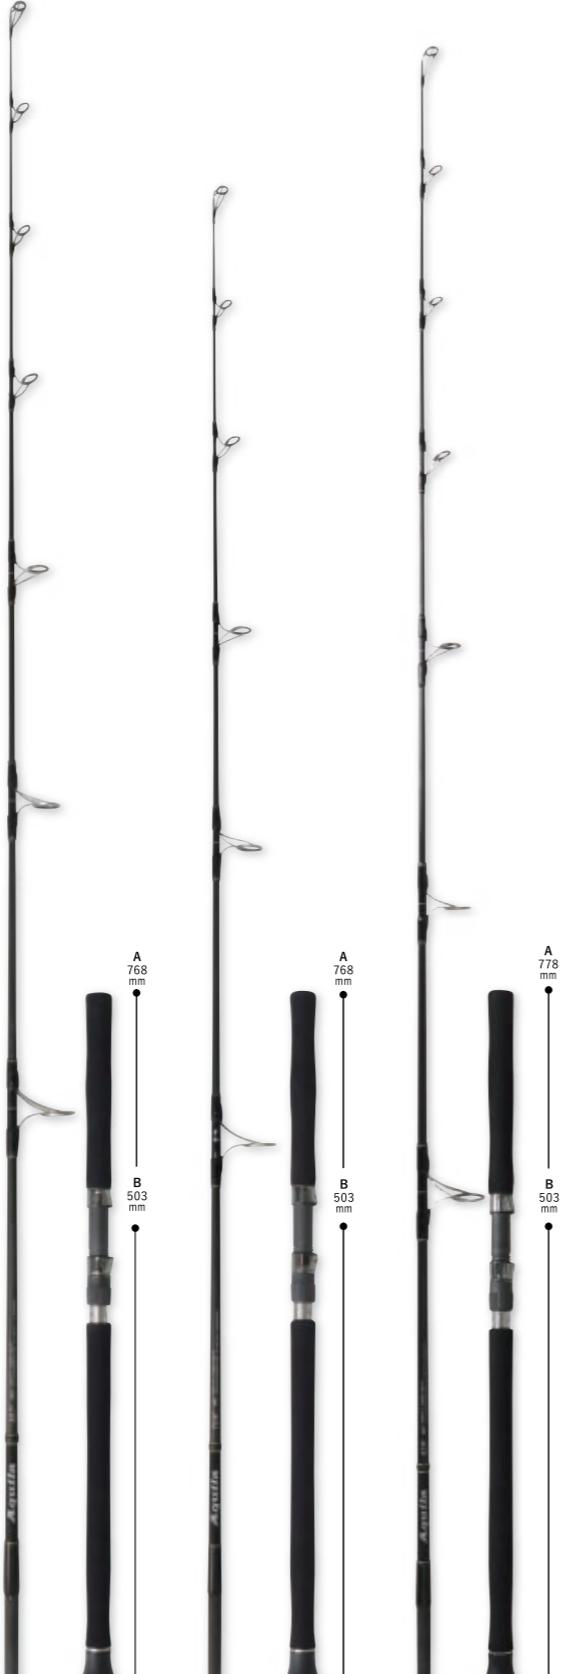

This is a model for anglers targeting supersize Kingfish with the use of 40g~120g lures. Although it is categorized as a power model, the lightness of the rod will allow anglers to cast all day long and freely pursue the lightning speed Kingfish. As the bending point transfers towards the angler once hooked up, anglers will be able to conduct a steady fight by counteracting your body weight against the fish by lowering your hips and loading the rod even when you're almost against the bow railing. Furthermore, the length of the rod will also assist you when conducting long casts towards feeding tuna.

### Aquila MST 711-8+

This model is especially designed for anglers who face the dorado pattern, requiring them to utilize large lures up to 180g for the supersize Kingfish. It is also ideal for those anglers who like to go head to head with powerful fish in shallow areas. The underlying power of the rod also allows you to utilize this rod for the GT game. Compared to the ordinary GT rods, this rod will bend over more naturally, which is ideal for smaller/shorter and even female anglers.

### Aquila MST 82-9+

In the ever evolving Kingfish game, the need to use large lures has increased with the target feeding on large size bait-fish. The MST82-9+ was designed to enable anglers to fully-cast lures exceeding 240mm while easily controlling and maneuvering these mammoth lures. Furthermore, the Aquila MST series are especially designed to tenaciously bend-in while demonstrating outstanding lifting power when fighting against monstrous Kings in rough terrain and gushing currents. Although we have designed the rod with easy utility, it is the strongest of the series and one will require ample body strength and experience to maximize its true potential. Having said that, we are confident that this rod will help anglers in the toughest of conditions, against the biggest of fish while using these large lures. We present this rod for those who are seeking monster-class Kings around the world.

## Aquila MLT / MULTIPURPOSE

The Aquila MLT series were developed for situations where your targets are feeding on super small baitfish (white bait) and require anglers to utilize lighter tackle or for situations where the fish are highly sensitive towards fishing vessels and require anglers to cast long distances. You can say that we had to fuse together contradicting features of casting and controlling light lures while possessing the power for large species and maintaining the initiative of massive fish during the fight. It is a new generation of rods designed to catch large species with light tackle, requiring anglers to maximize the strength of the line. This line-up of rods compliments the compilation of models produced for our off-shore series.

\*The 2/4 notation on the rod means the tip section is a PE2 class while the butt section is PE4 max. (3/6 means the tip is a PE3 class while the butt is a PE6 class)

### Aquila MLT 82-2/4

The MLT82-2/4 has a tip section of a PE2 class, enabling anglers to accurately cast and control small ~ super small lures. It is an ideal model to overcome the challenging game where the white-bait are on the targets main menu. With its outstanding casting ability and controllability of the small lures, anglers will be able to reach great distances when casting and won't spook the fish from the presence of the boat. Although the tip section is light, the PE4 class butt section will enable anglers to maintain the initiative during the fight and lift the fish efficiently. Its versatility will allow anglers to target and land various species from the blue-runners, bonitos, dorados, and tuna. We hope this rod will assist those anglers who have been itching to cast smaller lures, farther, wider and with lighter line to catch your dream fish.

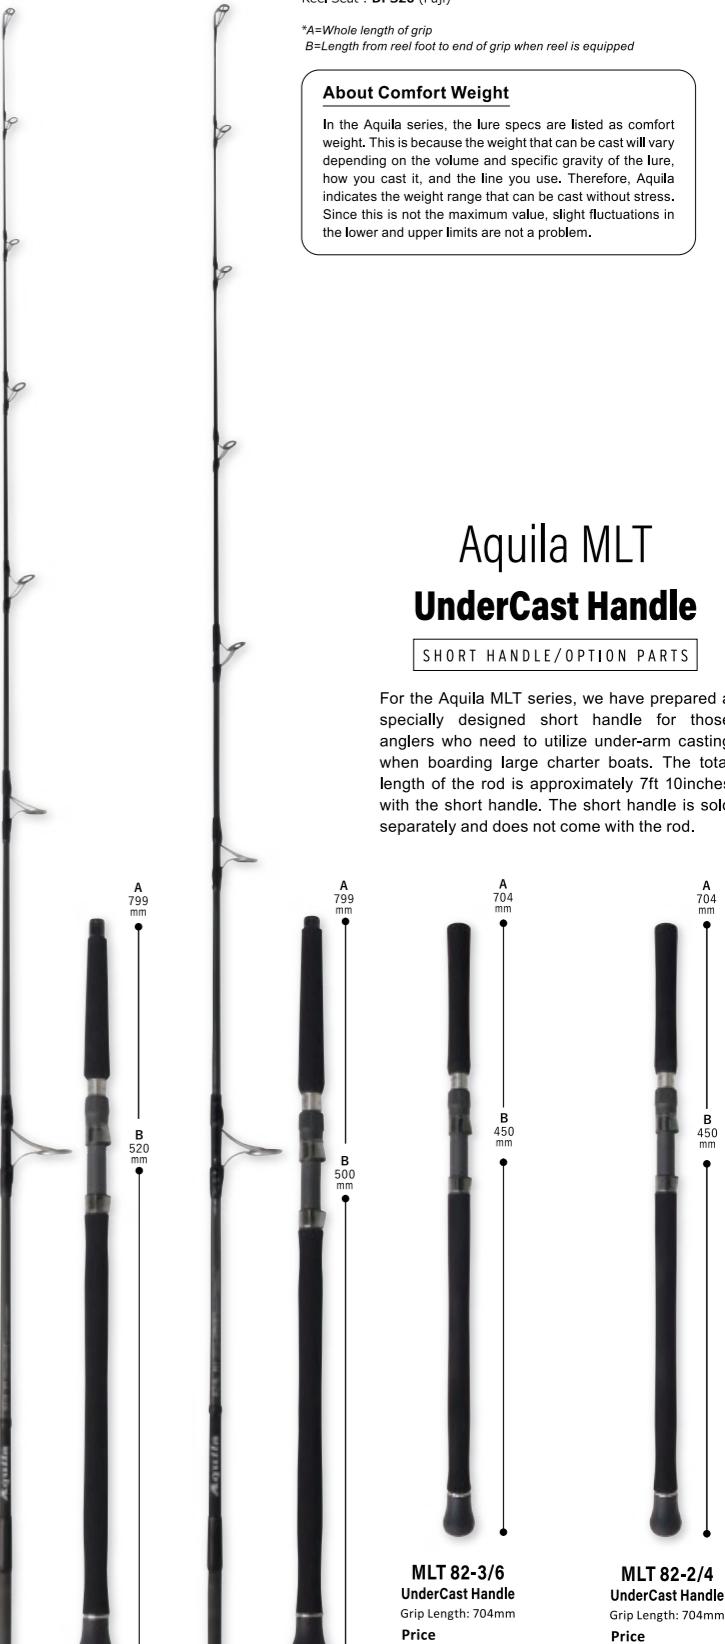

### Aquila MLT 82-3/6

This is a model with increased power to PE6 class compared to the MLT82-2/4, but for use with small lures and light line. The tip section has the flexibility of a PE3 while the butt section possessing the power of a PE6. When comparing to the ordinary PE6 class rod, anglers will be able to swing through with less effort while increasing the accuracy and casting distance. The blank will bend over nicely once loaded yet possessing the underlying power to stop the monstrous fish. During the testing of this model, we were able to catch a 47kg yellowfin tuna in less than 10 minutes with a PE4 line. With the contradicting features of power (for lifting the fish) and flexibility (for casting and controlling smaller lures), you could say that this rod is at the pinnacle of Ripple Fishers' rod making technology.

**About Comfort Weight**  
In the Aquila series, the lure specs are listed as comfort weight. This is because the weight that can be cast will vary depending on the volume and specific gravity of the lure, how you cast it, and the line you use. Therefore, Aquila indicates the weight range that can be cast without stress. Since this is not the maximum value, slight fluctuations in the lower and upper limits are not a problem.

For the Aquila MLT series, we have prepared a specially designed short handle for those anglers who need to utilize under-arm casting when boarding large charter boats. The total length of the rod is approximately 7ft 10inches with the short handle. The short handle is sold separately and does not come with the rod.

# Aquila ST / STANDARD

The Aquila ST series are models which have had all the standard yet important factors for the casting game fused together at a high dimension. Specifically, the standard performances of casting, lure maneuverability, hooking up the fish and fighting. They have a sharp feeling and once the rods are loaded with the fish, the bending curve will gradually transfer towards the angler, allowing for a steady fight utilizing the butt power to maintain the initiative of the fight. We have prepared 4 power classes of PE #2, #3, #4 and #6 to cater for various species and situations.

## Aquila ST 81-2

The model was designed to capture the selective species such as Spanish mackerel and bonitos around the bay. Focusing on the castability and operability of small lures, we dedicate this rod for those anglers who continuously cast until they hookup a fish. Once you are onto a fish, the reliable butt section will allow for a speedy fight and will help you catch great numbers especially when the feeding time is limited. It is a sharp blank typically seen in the ST series, and the belly section with ample stiffness helps easily control and maneuver the lure. This will allow anglers to utilize jerking action with minnows to induce bites from the spooked predators.

## Aquila ST 78-3

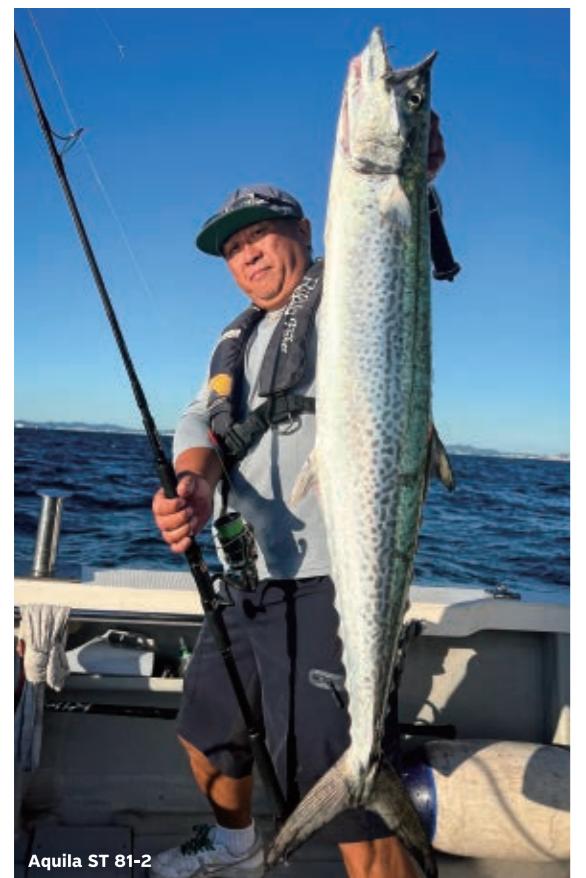

The shorter rod length is designed for easy handling and casting for use on small ~ medium size boats. The tip section has sufficient stiffness, yet allows anglers to cast smaller size top water plugs to maneuver on the surface. It is an ideal rod for targeting bonitos, yellowtails and Kingfish, which require subtle lure control with light line. For those who own boats, you can target various species with this single versatile short length rod.

## Aquila ST 80-4

This medium powered rod is your PE4 class casting rod for your local waters. Once loaded, the rod bends smoothly towards the butt section, creating a beautiful arc. Although it has a sharp feeling, the slow-tapered rod is designed to bend towards the butt section to absorb the thrashing run and enable a stable fight against 10kg class Kingfish.

## Aquila ST 85-6

This ST85-6 have enough sharpness on blanks to deliver small lure like a bullet. Especially when you have to cast into boil of kingfish or tuna in head wind, you won't lose accuracy and you can deliver lure where you have wished to. It has been designed to be worked as like your arms on manipulating and provide you a stability on fighting.

# Aquila EX / EXPEDITION

The Aquila EX series are the ultimate 3-piece expedition pack rod without compromises. Today, anglers are flying around the world to target their dream species and the farther you go, the more limitations there are regarding your luggage. Through countless trial and error, the Aquila EX series have now come to shape and ready to travel with you wherever you go. We have prepared a PE3 and PE6 class models for use with a vast range of lures with a super sharp feel to it. Although they are 3 piece models, it possesses a sharp feel to it and anglers will be able to bend and load the butt section of the rod to stop the monstrous targets. We are confident that these models will help you catch those rare species at the most remote areas around the world.

## Aquila EX 79-3

The EX79-3 was designed with its sights on targets like the Cubera snapper, Roosterfish from Latin America and other exotic species that inhabit the various Amazon ponds in Asia. As you are limited with your tackle options when traveling the world, we have created this versatile rod for use with a vast range of lures from the large jig heads, poppers and diving pencils. The rod can be characterized as being a little stiffer compared to the ordinary grip joint rods, but it is a highly responsive rod also ideal for use in the casting game targeting the bonitos and yellowtails from smaller boats.

## Aquila EX 83-6

The EX83-6 is a model ideal as a light tackle rod for the GT game or Kingfish game. Through the countless testing phases, we were able to come up with a "flexible" tip section which is extremely rare for pack-rods, enabling anglers to easily control the subtle action of middle size diving pencils. During the field-testing, the butt section was able to stop the run of the GT in shallow waters of 6m, while the rest of the rod bending and absorbing the power of the angry GT. The rod has proven itself that it can be one of your trusted main weapons for your exotic expeditions around the world.

Aquila EX 83-6

Aquila ST 81-2

MLT have been built with specialized design to hunt big one with lighter line than notation on specification. Utilizing its flexible and sensitive tip section, you can cast wider range of weight of lure comfortably. Once fish is on, MLT series bend very well smoothly like seamless and parry an attack of monstrous blue runner and it can be held with higher angle than other models. It is designed to apply good amount of pressure on fish continuously.

\*Static load comparison does not represent all rod characteristics such as repulsion force. There are individual differences in how the load is applied when actually bending the rod, so please use this as a guide only.

## BIG TUNA POWER CATEGORY

Power Category	Model	Line Class	Lure	Drag Max
Light Class	<b>85F</b>	PE3~6	18~120g	10kg/45°
Middle Class	<b>87AS</b>	PE5~8	40~150g	15kg/45°
	<b>83</b>	PE6~8	40~150g	15kg/45°
Heavy Class	<b>86</b>	PE8~12	40~160g	15kg/45°
	<b>710 RT</b>	PE8~12	40~160g	15kg/45°
Power Class	<b>73</b>	PE8~12	60~180g	18kg/45°
	<b>76</b>	PE8~12	60~180g	18kg/45°
	<b>70</b>	PE10~12	80~220g	18kg/45°

We have set the power category as follows in order for a more comprehensive understanding. The 86, 710RT, 73, 76, 70 are all in the same line max category however the 73, 76, 70 have been designed with a higher breakage point suited for targeting 200kg class fish which are in a different power category from 86 and 710RT. The 86 and 710RT models can be used in situations where a long cast is required or more sensitive action is required.

\*Please note that aiming huge tuna over 100kg in rough conditions is dangerous. Regarding "models that are designed for extremely large bluefin tuna" such as BIG TUNA73, 76, and 70, the explanations and specifications are written assuming that you have the appropriate physical strength, training, and experience. Thank you for your understanding.

The 85F, 87AS, and 83 models are also useful for targeting yellowfin tuna, and the standard is 85F for tuna size 50kg or less, and 87AS and 83 for tuna size 80kg or less. Please consider the lure size to be used, the line, the size of the tuna, and the lure appeal required, and choose a model.\*Even though the maximum line value is the same, the set drag value will vary depending on the model, so please keep this in mind when choosing a rod.

\*If you are looking for a lighter model than the BIG TUNA series, we also recommend the Aquila series' MLT82-3/6, MST85-7+ and MLT82-3/6 does not have as strong a butt power as the BIG TUNA series, but it has an achievement of catching tuna over 50kg during testing. This model is also recommended for those who want to cast small lures when using ultra-small bait patterns such as whitebait. MST85-7+ has a short length grip, allowing for faster and more agile casting. It has excellent long-distance casting performance, so it is recommended for both shooting to fish feeding on surface and luring out.

The rod design of the BIG TUNA series is color-coded with thread colors matching the power class on the left. Also, the model name is engraved on the spacer on the reel sheet of the grip.

# BIG TUNA LINEUP

4 POWER CLASS

## BIG TUNA 85F JAPAN Special Light Class

This is a model capable of being high stuck while also being able to cast small lures a great distance. Anglers will be able to utilize lures ranging from 18g~120g and line ranging from PE3~6. We have given this rod a wide range to deal with the high pressure from anglers as well as to induce bites when the Tuna are feeding on small baits. Although it is classed as a light rod in the lineup, you will be able to land 50kg Yellowfin and Bluefin Tuna.

## BIG TUNA 87AS JAPAN Special Middle Class

As its name suggests, the AS (Accuracy Shoot) model is designed to accurately cast lures into the feeding fish. In addition to the steady blank kick-back after casting, we have equipped two RV guides on the butt enabling an extremely smooth line ejection from the reel through to the rod. The casting ability will support anglers when the feeding frenzy is far or in heavy conditions casting into the wind. It is not only able to cast large lures but the blank will also allow the use of small 40g size lures. This middle class rod will assist anglers with its taper design ideal to slowly but surely lift the fish from the deep while being able to high-stick the rod.

※If you prefer a more speedy fight (same size fish) we recommend the 83. (87AS is 1 rank lighter compared to the 83. Furthermore, the 87AS is a totally different model and design to the 87 which has been discontinued.)

## BIG TUNA 83 JAPAN Special Middle Class

This model was developed with "lure control" and "fight" as its main focus, but it goes without saying that casting is also outstanding. It is a PE6~8 middle class rod not only able to pinpoint cast but also able to utilize small mouthed diving poppers and diving pencils required for an attack. You will be able to realize the evolution of our BIG TUNA series with its lightness and outstanding balance, allowing anglers to cast all day long. Furthermore, the bending point is set close to the body enabling anglers to easily bend in and capitalize on the butt power with little effort.

## BIG TUNA 86 JAPAN Special Heavy Class

If you require long and accurate casting with a heavy class tackle, this 86 will be your choice. In comparison to your ordinary heavy tackle, the flexible tip on the 86 will allow for easier casting of smaller lures when the bait-fish are small though the Tuna are huge. The bending point (pivotal point) is closer to the body allowing anglers to take initiative during the fight.

## BIG TUNA 710RT JAPAN Special Heavy Class

Compared to the characteristics of the original model, we have re-designed the model to suit the current tuna scene. Since we have designed the taper of the blank to be most productive in the butt section, anglers will be able to efficiently and effectively utilize the butt power to lift the tuna. It's not simply a more flexible model compared to its predecessor, but a highly well-balanced heavy class model able to effortlessly stimulate bites from casting top water lures while having the power to go head to head with the biggest of fish. This will be your ideal model if you are in situations where you need to cast lures all day long.

## BIG TUNA 76 JAPAN Special Power Class

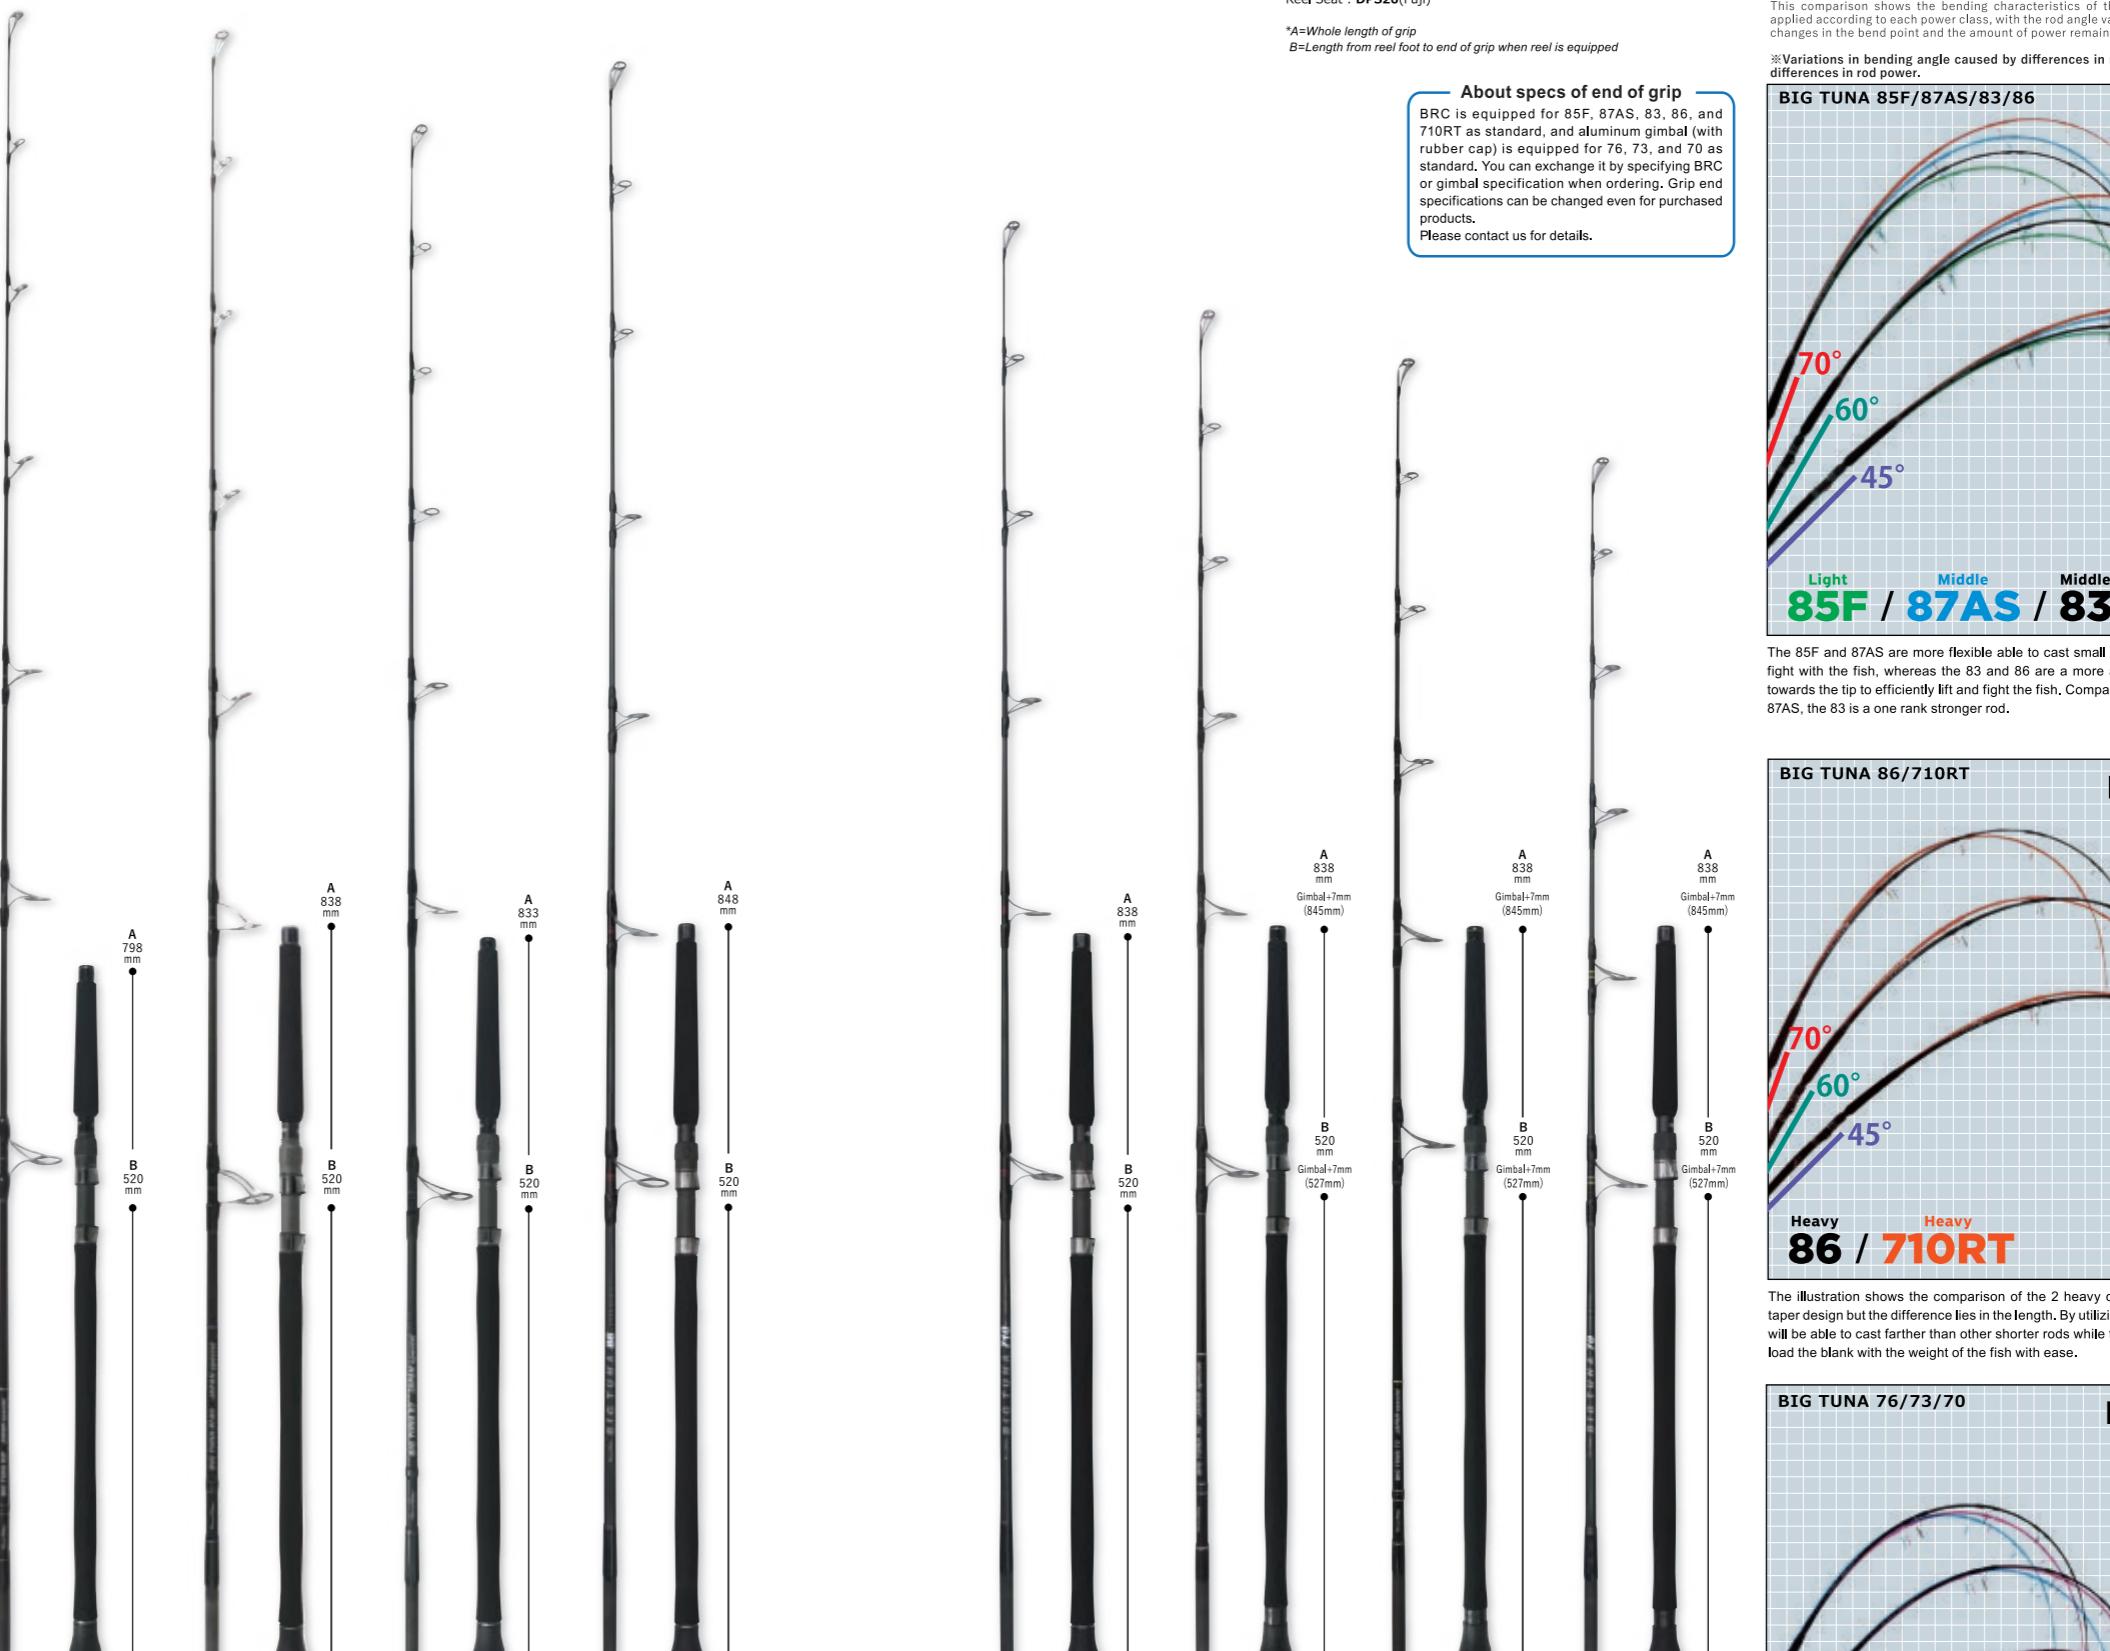

This model is for anglers with their sights on Blue-fin tuna weighing over 200kg. Similar to the 73, this 76 is capable of not only casting large lures mostly used when the targets are feeding on dolphin fish (mahi-mahi), but also allows anglers to cast and control the lighter (60g) sinking pencils for smaller baits. The difference from the 73 will be the contrasting fight style. While possessing strong butt power to constantly apply pressure on the fish, we have drastically reduced the load on the angler by bringing the bending point closer to the angler, allowing for a prolonged fight.

## BIG TUNA 73 JAPAN Special Power Class

This model is for anglers with their sights on Blue fin tuna weighing over 200kg. Its castability is next to non, able to accurately hit feeding targets with large lures most productive when they are feeding on dolphin fish (mahi mahi). Being short in length and the stiffest model in the series, it is most suited for anglers who have confidence in their strength and ability to go head to head with the monstrous tuna.

## BIG TUNA 70 JAPAN Special Power Class

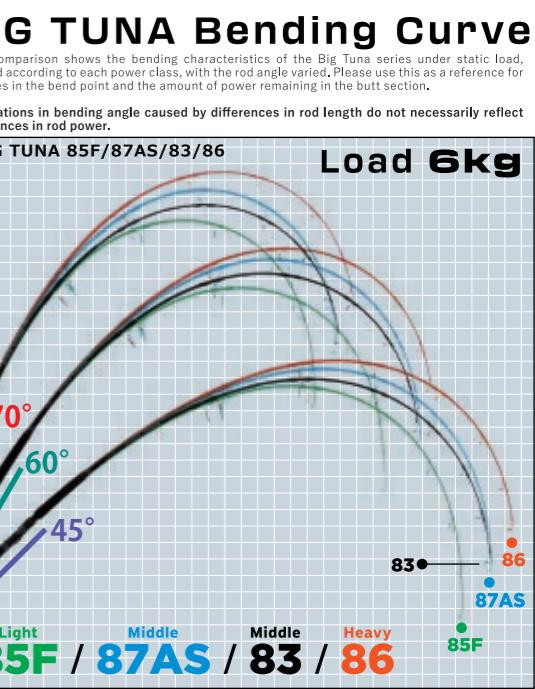

This is for those anglers with their sights on super monstrous Blue-fin tuna. It is model for anglers who need to "high-stick the rod" to load the blank or utilize the "straight pumping" fight style. The power of the rod is similar to the BT76 and BT73 but the breaking point is much greater compared to these two. With the shorter designed blank, the bending point is set closer to the body, drastically reducing the load and stress on the angler. It also has enough length and leverage to go around the bow or other obstacles on the boat for a smoother fight.

**ROD DETAIL** Please refer to the list on page 66 to check details of rod specifications.  
Reel Seat : DPS20(Fuji)  
\*A=Whole length of grip  
B=Length from reel foot to end of grip when reel is equipped

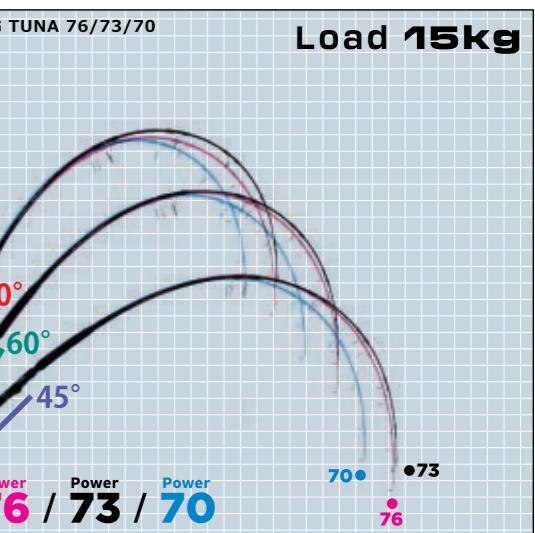

**About specs of end of grip**  
BRG is equipped for 85F, 87AS, 83, 86, and 710RT as standard, and aluminum gimbal (with rubber cap) is equipped for 76, 73, and 70 as standard. You can exchange it by specifying BRG or gimbal specification when ordering. Grip end specifications can be changed even for purchased products. Please contact us for details.

The 85F and 87AS are more flexible able to cast small lures and designed for a more mellow fight with the fish, whereas the 83 and 86 are a more aggressive rod with the bending point towards the tip to efficiently lift and fight the fish. Compared with the same middle-class rods of 87AS, the 83 is a one rank stronger rod.

The illustration shows the comparison of the 2 heavy class rods. Both rods have a similar taper design but the difference lies in the length. By utilizing the length of the 86 blank, anglers will be able to cast farther than other shorter rods while the shorter 710RT is a model able to load the blank with the weight of the fish with ease.

The picture illustrates the comparison of the 3 power class models. When looking at the comparison with a 45 degree angle, the 73 and 76 look similar, however, the bending point of the 76 is closer to the angler, reducing the stress on the angler, while the 73 is further away enabling a more speedy fight against the fish. The 70 has the strongest butt power with the bending point being close to the angler, drastically reducing the load on the angler. The three models are the same power class, yet having totally different characteristics.  
※when choosing a tuna rod, please be sure to choose the most suited rod depending on your height, weight, strength and experience.

# OCEÁNICA

FOR UNRULY PASSIONATE ANGLERS

As the first release of the OCEÁNICA series, we have packed the stylish and excellent functionality envisioned by Ripple Fisher into the tubular-designed rod "OCEÁNICA-DFT" for "Stand-up tuna drifting", which is popular both in Japan and overseas. This will bring a new sensation and fresh air to this category where glass solids are the norm.

## OCEÁNICA DFT61/PE6-8

Line: PE 6~8 Drag: Max 20kg/45°

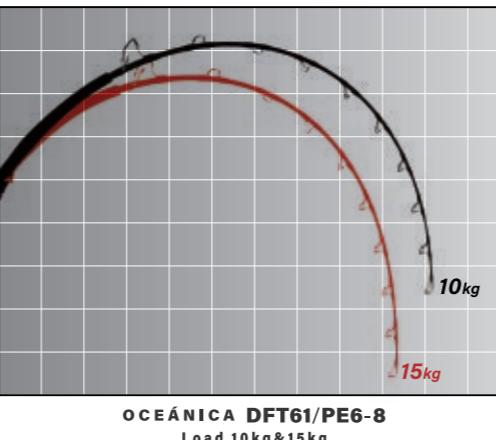

Price:

This is a full tubular blank "Stand-up tuna drifting" rod that targets large yellowfin tuna to marlin. The DFT61/6-8 has a highly sensitive tip section that allows you to send bait to the school of fish, and a flexible belly section that bites well and has high hook-up ability even in severe conditions so that you won't miss any rare opportunities. It has a strong restoring force unique to tubular blanks and high lifting force that can keep the tuna controlling, but when loaded, it bends smoothly all the way to the handle, reducing the load and allowing for a stable fight even at high drag. The DFT61/6-8 is a mid-power rod with full torque and speedy fighting performance that allows you to directly feel the thrill of a standing fight.

Length: 6ft 1in(1866mm)

Weight: 595g

Guide: HBSG guide + butt guide RBSG guide(Fuji) Spiral guide setting

## OCEÁNICA DFT511/PE12-15

Line: PE 12~15 Drag Max: 35kg/45°

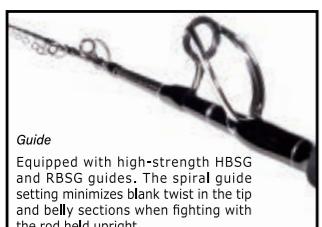

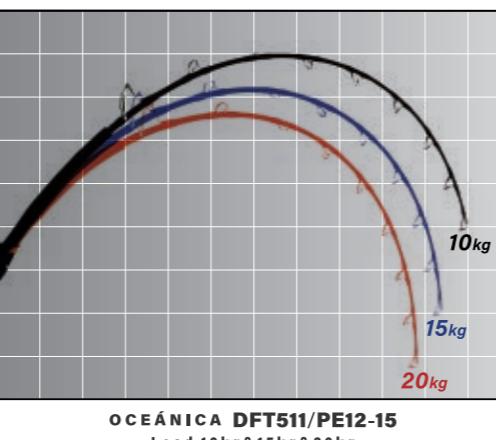

Price:

The DFT511/12-15 was developed with a focus on super-large bluefin tuna over 200kg, and its aim was to provide the fighting performance to catch super-large bluefin tuna efficiently and in a short time. In addition to the strong force of recovery and high lifting power unique to tubular blanks, the butt section is reinforced with high-strength carbon material with high tension, making it a sturdy rod with the power to control even super-large sizes. Despite its overwhelming rod power, in order to minimize physical exhaustion, the fulcrum of the bending during the fight is placed at the angler's hand, and the tapered design allows the entire rod to bend and restore, making it easy to regain position even during long fights under ultra-high loads, allowing for a tenacious and stable fight until landing. The DFT511/12-15 is a standing swimming rod that combines Ripple Fisher's knowledge of big game fishing and design technology cultivated over many years at a high level for anglers who aim to reach the top and challenge records.

Length: 5ft 11in(1813mm)

Weight: 635g

Guide: HBSG guide + butt guide RBSG guide(Fuji) Spiral guide setting

W7.WRAP GOLD

W8.WRAP GREEN

In addition to our standard 12 custom colors, we are proud to offer the "Wrap Paint" series—a special finish exclusive to the OCEÁNICA line. This technique requires a meticulous, time-consuming manual process that is impossible to reproduce by machine. The allure of this special color lies in its total originality; because each rod is hand-finished, no two patterns are ever exactly alike. The OCEÁNICA-exclusive "Wrap Paint" custom option is available in 8 distinct colors.

\*Please note: Custom blank coloring for OCEÁNICA models is available only as a full-blank paint option.

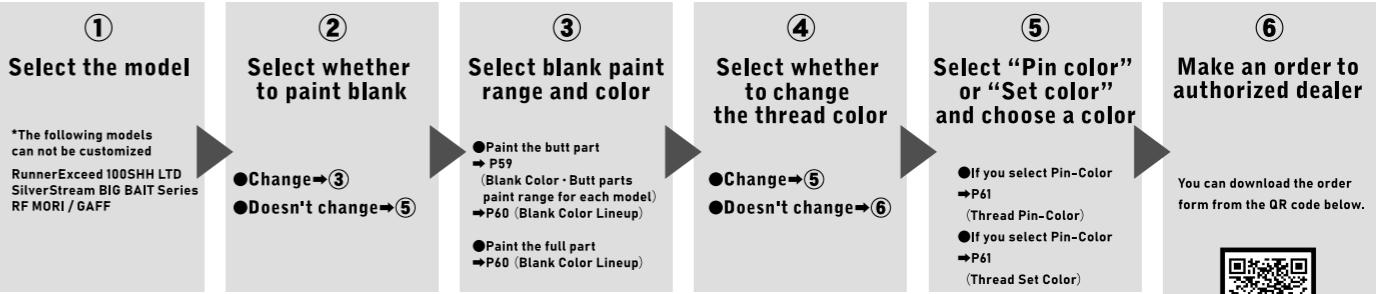

Standard custom options are also available. Please refer to page 58 for details on colors.

## RIPPLEFISHER CUSTOM COLOR OPTION

### Color Custom Order Guide

**● Delivery date**  
With regards to your custom order delivery date, it will take roughly 9~10 months depending on our production schedule.

**● Changes and cancellation of custom order**  
Please note that basically we do not accept changes or cancellations of custom order after a month have passed since we have received order from retail shop or official agent. Thank you very much for your understanding.

16.METAL GREEN

## BLANK COLOR LINEUP

● You can order color customization either whole blanks (from butt to top guide) or butt section only (range of model logo). Please select color from the chart.

If you customize butt section only, rest of blanks of it will be finished in original color.

The prices will differ from the standard colors (01~08 • 15 • 16) and "Maziora" color (09 ~11) to the Clear Color(12~14).

\* You can only select one color. We cannot accept requests for gradation, matt finish or changes between two colors.

\* If you choose the 08 (silver color) or 15 (gold color), the logo print will be black only.

\* The clear colors are exclusive to Ultimo • BIG TUNA 76/710RT/86 and cannot be selected for other models.

\* Ultimo • BIG TUNA 76/710RT/86 can also choose colors 01 to 11 other than clear color.

\* Color custom is not available.

- RunnerExceed 100SHH LTD
- SilverStream BIG BAIT Series
- RF MORI / GAFF

## RIPPLE FISHER 2026 ORIGINAL GEARS

### RF Measure Release Mat Price:

- Size: 900×1740(mm)
- Weight: about 1600g
- Accessories: stainless carabiner (ASANO)
- Material: Tarpaulin polyester

more detail

We developed the measuring mat for anglers targeting record breaking species off the rocks to safely and gently measure your catch for a smooth release. Once the fish is laid down on the mat, you can lift it by grabbing the handles on both sides. One half of the mat has a pocket shaped slot, so your fish will not slip off even on a slight angle. The inside of the pocket has a drainage hole, so it is easy to dry and keep clean after your fishing trips. We paid extra attention for designing the handle section so anglers will be able to lift the fish weighing around 70kg.

### RF GRIZZLE POWERED GLOVE

Price:

- Size: M • L • LL • Massivo 3L

Ripple Fisher original fishing gloves. By using NanoFront material, which has excellent durability, grip, and fit, and by placing anti-slip rubber, we have created a stronger grip for big targets. The material itself is thin and flexible, making it useful in a variety of situations, both offshore and shore.

more detail

### RF Land Base Fishing Bag

Price:

- Size: 1940mm×140mm×140mm
- Weight: 2430g
- Storage guide: Products with a closed size up to 1900 mm
- Name plate included / Material: Stainless steel SUS316L

more detail

### RF Knot Tightener
